Document 40190

Dear Commissioner,

I wish to opt-out of the Smart Meter installed at my residence. We have done everything at our home which includes installing 13 inches of insulation and radiant barrier (which was done in May 2012) Solar Screen on every window, Solar film shades too that are pulled down when temperatures outside reaches 100 degrees, We have an on demand hot water system(installed September 2006). A Trane High efficiency Air Conditioner installed July 2006. Which we maintain temperatures at 78 in summer and 72 in winter. All LED lights in our house. We have done other things too. Since the smartmeter has been installed our electric bill has gone up. I have a record of all our electric bills since 2001 and know each month what we have done to reduce our consumption.

Sincerely,

James Bucklew
