FILING CLERK

RE: Project No. 40190

Dear Commissioners,

I am requesting a form to opt-out of the advanced metering technology that is being forced on customers.

Health Concerns

- I understand that the World Health Organization classified the microwave radiofrequency radiation as a class 11B carcinogen on par with lead. I understand that some people that you have forced it on are now having extreme health problems.
-

Some specific Health Effects

- Microwave Radiofrequency radiation cause:
 - Heart rhythm disturbances
 - Heart palpitations
 - Dizziness
 - Impaired cognition
 - Impaired memory
 - Decreased melatonin secretion which causes insomnia
 - Altered brain wave patterns
 - Increases in tumor and cancer formation

I have not consented to your possible damage of my body parts nor has my 92 year old mom who also lives here. I might suggest you get a signed and authorized form giving you our permission to do so. It is not like one of us has an incurable illness and have given you our permission to test a product on us that is a possible cure knowing that we might die if it doesn't work. You do not have our permission to either one of us sick.

Privacy Concerns

- "Smart-meters" record the exact times that devices in your home are turned on and off and all other information that will be gathered has not been permitted by me.
 - The tracking system you intend to arm my home with seems to be the equivalent of a spy thing that I thought was only in the movies. I have not requested surveillance of my premises. It seems that you are opening my home up (without a key or permission) to anyone with a criminal mind. Even the police have to have a judge's order to do that. I will look into that one.

In Conclusion:

352

It seems that your "service" of providing electricity has added a few services that do not include saving energy but has the potential of harming already ill people that, in their case, may cause death and making well people ill.

As if that in itself is not enough, it seems that your surveillance of my personal home and life without just cause or permit should be deemed invasion of privacy. Don't think that is legal.

And you want people to pay to harm themselves?

As put by another individual who also wants to opt-out of having a smart meter in his home, or on his premise, "It is the role of the government and public agencies to protect the public from unwarranted threats to their constitutional rights and safety". And I too hope that this commission takes that duty seriously.

Thank you for your time and attention to this serious matter.

Enclosed are the requested 16 copies.

Sincerely,

A handwritten signature in black ink, appearing to read "Joyce Gregory". The signature is fluid and cursive, with the first name "Joyce" written in a larger, more prominent script than the last name "Gregory".
