Redline Comparison of Direct Testimony (12/4/17) and Revised Direct Testimony
(02/07/18)112

1 **I. INTRODUCTION AND QUALIFICATIONS**

2 **Q. PLEASE STATE YOUR NAME, OCCUPATION, AND BUSINESS ADDRESS.**

3 A. My name is Karl J. Nalepa. I am President of ReSolved Energy Consulting, LLC, an
4 independent utility consulting company. My business address is 11044 Research
5 Boulevard, Suite A-420, Austin, Texas 78759.

6 **Q. ON WHOSE BEHALF ARE YOU PRESENTING TESTIMONY IN THIS**
7 **PROCEEDING?**

8 A. I am presenting testimony on behalf of the Office of Public Utility Counsel (OPUC).

9 **Q. PLEASE OUTLINE YOUR EDUCATIONAL AND PROFESSIONAL**
10 **BACKGROUND.**

11 A. I hold a Bachelor of Science degree in Mineral Economics and a Master of Science
12 degree in Petroleum Engineering, and am a certified mediator. I have been a partner in
13 ReSolved Energy Consulting since July 2011, but joined R.J. Covington Consulting, its
14 predecessor firm, in June 2003 as a Management Consultant. Before that I served for
15 more than five years as an Assistant Director with the Texas Railroad Commission
16 (RRC). In this position, I was responsible for overseeing the economic regulation of
17 natural gas utilities in Texas. And prior to that, I spent five years with two different
18 consulting firms providing expert advice regarding a broad range of electric and natural
19 gas industry issues. Before that, I served four years as a Fuels Analyst with the Public
20 Utility Commission of Texas (PUC). My professional career began with eight years in
21 the reservoir engineering department of the exploration company affiliated with Transco

1 Gas Pipeline, a major interstate pipeline company. My Statement of Qualifications is
2 included as Attachment A.

3 **Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THIS COMMISSION?**

4 A. Yes, I have testified many times before both the PUC and the RRC on a variety of
5 regulatory issues. A summary of my previously filed testimony is provided in
6 Attachment B. In addition, I supervised the staff case in proceedings before the RRC and
7 served as a Technical Rate Examiner on behalf of the RRC. I have also provided analysis
8 and recommendations in numerous city-level regulatory proceedings that resulted in
9 settlements without written testimony.

10 **II. PURPOSE AND SCOPE**

11 **Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS PROCEEDING?**

12 A. The purpose of my testimony is to evaluate whether Southwestern Electric Power
13 Company's (SWEPCO or Company) application for a Certificate of Convenience and
14 Necessity (CCN) is in the public interest and should be granted.

15 **Q. WHAT IS THE SCOPE OF YOUR TESTIMONY?**

16 A. My testimony evaluates the costs and benefits of the project asserted by SWEPCO in its
17 application as well as the Company's proposals for project cost recovery.

18 **III. OVERVIEW OF APPLICATION**

19 **Q. WHAT IS SWEPCO REQUESTING IN ITS APPLICATION?**

1 A. SWEPCO is seeking the Commission's approval to amend its CCN to include its Wind
2 Catcher Energy Project, which is a proposed wind facility and associated transmission
3 line (the Project).¹ More specifically, the Project is comprised of:

- 4 • the 1,900 megawatt (MW) States Edge Wind generating plant and associated
5 facilities located in Texas and Cimarron Counties in the Oklahoma Panhandle that
6 is under construction by Invenergy Wind Development North America, LLC (the
7 Wind Facility); and
- 8 • a 350- to 380-mile extra high voltage (EHV) 765 kV transmission line (the Gen-
9 Tie) running through northern Oklahoma from the Wind Facility in the Panhandle
10 to the American Electric Power (AEP) load zone in the Tulsa area.

11 The Project is proposed to be owned 70 percent by SWEPCO and 30 percent by Public
12 Service Company of Oklahoma (PSO).

13 **Q. WHAT IS THE BASIS FOR SWEPCO'S REQUEST?**

14 A. SWEPCO states that the Wind Catcher Project is being developed to capitalize on the
15 wind profiles in the Oklahoma Panhandle while realizing the potential cost savings due to
16 the availability of federal production tax credits (PTCs). The Project is intended to
17 provide immediate economic benefits to customers through reduced energy costs, not to
18 serve growing load.²

19 **Q. WHAT ARE THE PROJECTED COSTS OF THE WIND PROJECT?**

¹ Application at 3-4.

² Application at 2 and 6.

1 | A. In its application, SWEPCO estimates the cost (including Allowance for Funds Used
2 | During Construction (AFUDC)) of the Wind Facility to be approximately \$2.90 billion,
3 | of which SWEPCO's share is approximately \$2.03 billion. The total estimated cost
4 | (including AFUDC) of the Gen-Tie is \$1.62 billion, of which the SWEPCO share is
5 | approximately \$1.14 billion. Thus, the total estimated cost of the Project (including
6 | AFUDC) is approximately \$4.53 billion and SWEPCO's share is approximately \$3.17
7 | billion. The SWEPCO Texas retail jurisdictional total estimated cost of the Project
8 | (including AFUDC) is \$1.09 billion.³

9 | **Q. WHAT IMPACT WOULD THESE COSTS HAVE ON SWEPCO'S CURRENT**
10 | **RATE BASE?**

11 | A. This is a significant project that will increase SWEPCO's rate base by more than 70%,
12 | from \$4.44 billion to \$7.61 billion.⁴

13 | **Q. WHAT ARE THE PROJECTED BENEFITS OF THE WIND PROJECT?**

14 | A. SWEPCO explained that it developed (through its parent AEP) three market simulation
15 | cases to estimate the savings attributable to the Wind Facility. In its application,
16 | SWEPCO claims that the results of the economic evaluation show that the Project is
17 | expected to save SWEPCO customers approximately \$1.9 billion on a total Company net

³ Application at 4 and Attachment B, *Public Notice*.

⁴ See Docket No. 46449, *Application of Southwestern Electric Power Company for Authority to Change Rates*, Schedule B-1, *Rate Base and Return*: Total requested rate base of \$4.44 billion compared to a cost of \$3.17 billion for the Wind Catcher Project.

1 present value (NPV) basis and approximately \$750 million on a Texas retail jurisdictional
2 NPV basis.⁵

3 **Q. HOW WOULD THESE SAVINGS IMPACT SWEPCO'S CURRENT FUEL**
4 **COSTS?**

5 A. SWEPCO's projected savings on a Texas retail jurisdictional basis is approximately
6 \$30 million per year (\$750 million / 25 years = \$30 million per year). SWEPCO's Texas
7 retail jurisdictional fuel costs are approximately \$224 million per year.⁶ Therefore,
8 SWEPCO's projected savings from the Wind Catcher Project is approximately 13% of its
9 annual fuel expense.

10 **Q. DID SWEPCO UPDATE ITS CLAIMED PROJECT SAVINGS TO CUSTOMERS**
11 **AFTER FILING ITS APPLICATION?**

12 A. Yes. In its revised rebuttal testimony filed on January 19, 2018, SWEPCO updated its
13 assumptions regarding the calculation of Project savings, including (1) lowering the
14 federal income tax (FIT) rate from 35% to 21% consistent with the recently passed Tax
15 Cuts and Jobs Act of 2017 (Tax Act), (2) adding the return on a deferred tax asset, and
16 (3) recognizing the flow-through of 100% of off-system sales margins to customers. The
17 deferred tax asset is intended to carry PTCs that cannot be fully utilized by the Company
18 in the years that they are earned. This is the result of the change in FIT rate. According
19 to SWEPCO, the effect of these changes is to lower the overall Project savings to \$1.5

⁵ Application at 4-5.

⁶ See Docket No. 47553, *Application of Southwestern Electric Power Company for Authority to Reconcile Fuel Costs*, Application at 2, where \$670,859,057 / 3 years = \$223,619,686 per year.

1 billion for SWEPCO customers under its Base Gas Case forecast and \$1.1 billion under
2 its Low Gas Case forecast.⁷

3 **Q. DID SWEPCO MAKE ANY OTHER CHANGES IN ITS REVISED REBUTTAL**
4 **TESTIMONY?**

5 A. Yes. In its rebuttal testimony, SWEPCO for the first time provided certain minimum
6 performance guarantees for the Project. SWEPCO then revised these guarantees in its
7 revised rebuttal testimony.⁸ In particular, SWEPCO now proposes the following
8 guarantees:

9 1. A cost cap for the Wind Facility, Gen Tie, and generation interconnection costs of
10 \$3.339 billion, excluding AFUDC, which is 109% of the estimated cost of
11 SWEPCO's 70% share of the Project. This also excludes costs related to force
12 majeure and changes in law.

13 2. The Project will qualify for 100% of the value of the PTCs.

14 3. The Project will generate a minimum annual production at the busbar of 5,481
15 GWh on a 5-year average. This equates to a 44.7% net capacity factor. If the
16 minimum is not met, SWEPCO will make a "make whole" payment for the value
17 of the energy not delivered from the Project and associated PTCs.

18 4. SWEPCO will flow to customers 100% of incremental off-system energy sales
19 margins and the net proceeds from the sale of Project renewable energy credits.

20 In addition:

21 5. SWEPCO will ensure Most Favored Nation status in the event that more
22 favorable terms are agreed to in other state utility commission proceedings
23 regarding the Project.

24 6. SWEPCO will file a fuel reconciliation within 12 months after the Project is
25 included in base rates, so parties will have the opportunity to review the costs
26 recovered through the fuel clause. Additionally, SWEPCO will file a rate case no

⁷ Revised Rebuttal Testimony of Kelly Pearce at 10 and Exhibit KDP-2R.

⁸ Revised Rebuttal Testimony of Thomas Brice at 5-8.

1 later than four years after the Commission issues its final order in SWEPCO's
2 current Docket No. 46449 rate case.

3 **Q. HOW DO THESE GUARANTEES COMPARE TO THE GUARANTEES**
4 **PROVIDED IN SWEPCO'S REBUTTAL TESTIMONY?**

5 A. SWEPCO made two changes to its guarantees to improve the benefit to customers. First,
6 it lowered the cost cap from 110% to 109% of project costs and applied the cost cap to
7 the entire project cost rather than only on the portion of the costs it proposed to be
8 recovered through the fuel clause. Second, it increased the minimum generation
9 guarantee from 5,179 GWh to 5,481 GWh on a five-year average basis, which equates to
10 improving the NCF from 42.2% to 44.7%.

11 **Q. WHAT EFFECT DOES SWEPCO CONTEND THESE MINIMUM**
12 **PERFORMANCE GUARANTEES WILL HAVE ON ITS CLAIMED CUSTOMER**
13 **SAVINGS?**

14 A. SWEPCO claims that its customers would still receive benefits of \$260 million under the
15 Company's Low Gas Case, with a 21% federal corporate tax rate, the impact of PTC
16 carrying costs, and these minimum performance guarantees.⁹

17 **Q. WHAT IS THE SPECIFIC RELIEF THAT SWEPCO IS REQUESTING IN THIS**
18 **PROCEEDING?**

19 A. SWEPCO specifically requests that the Commission:¹⁰

- 20 1. Amend SWEPCO's CCN and authorize acquisition of the Wind Facility and
21 construction of the associated Gen-Tie pursuant to PURA § 37.056;

⁹ Revised Rebuttal Testimony of Kelly Pearce at 21.

¹⁰ Direct Testimony of Venita McCellon-Allen at 5-6.

- 1 2. Find that a good cause exception to 16 TAC § 25.236 is warranted to allow
2 SWEPCO to pass the Project revenue requirement and PTCs to customers through
3 fuel expense until the Project is included in SWEPCO's base rates;
- 4 3. If the Commission determines PURA § 14.101 is applicable, find that SWEPCO's
5 purchase of the Wind Facility is in the public interest under that provision;
- 6 4. Approve SWEPCO's request to include any PTCs deferred for ratemaking
7 purposes in a regulatory liability that is included in rate base and earns interest at
8 the Company's pre-tax weighted average cost of capital (WACC) from the
9 commercial operation date of the Project;
- 10 5. Approve SWEPCO's request to include any unrealized PTCs in a deferred tax
11 asset included in rate base in the event the PTCs cannot be fully utilized in a given
12 year;
- 13 6. Approve the requested depreciation rates for the Wind Facility and associated
14 Gen-Tie;
- 15 7. Approve SWEPCO's request to defer certain PTCs for credit beyond 10 years of
16 production; and
- 17 8. Issue a final order by April 30, 2018 to enable the commercial operation of the
18 Wind Facility and associated Gen-Tie prior to January 1, 2021.

1 **Q. IS SWEPCO'S REQUESTED RELIEF TYPICAL FOR A CCN APPLICATION?**

2 A. No, a typical application may request project approval but does not include the
3 ratemaking treatments as requested by SWEPCO.

4 **IV. SUMMARY AND RECOMMENDATIONS**

5 **Q. PLEASE SUMMARIZE YOUR RECOMMENDATION IN THIS PROCEEDING.**

6 A. SWEPCO's estimate of benefits is very uncertain, while placing all risk on ratepayers if
7 the claimed benefits do not materialize. Therefore, for the Company's application to be
8 in the public interest, the Commission should require that the following conditions be
9 met:

- 10 a. The Wind Facility capital costs must be capped at \$1,451 per kW, which
11 is inclusive of the purchase price and all associated costs.
- 12 b. The Gen-Tie capital costs must be capped at the contracted fixed price
13 amount of \$1.62 billion.
- 14 c. Customers must receive the benefit in reduced fuel expense and PTCs
15 based on a minimum Wind Facility net capacity factor (NCF) of 51.1%,
16 regardless of whether the actual NCF is lower.
- 17 d. Customers must be credited at the 100% level of PTCs, regardless of
18 whether SWEPCO qualifies for the PTCs or not.
- 19 e. SWEPCO must guarantee energy savings to customers based on its Base
20 Case forecasted natural gas prices, regardless of actual market prices.
- 21 f. The Commission should deny SWEPCO's request for a special
22 circumstances exception to the fuel rule and not allow the Wind Facility's
23 initial revenue requirement to be recovered through the fuel factor.
- 24 g. PTCs should be credited to fuel expense so that customers receive the full
25 benefit of the PTCs in a timely manner.
- 26 h. The Commission should reject SWEPCO's request to defer certain PTCs
27 in order to "shape" the PTC credit.

1

2

4

9

7

8

1 market conditions and are not guaranteed. Many factors will affect the extent of any
2 market savings, such as how much energy the Wind Facility produces, the market price
3 of natural gas (which sets the marginal price of electricity), and the market price of
4 electricity (with which the wind energy will compete). Thus, under SWEPCO's
5 proposal, customers will be responsible for all of the fixed project costs and bear the
6 entire risk of whether potential energy savings, which are subject to market forces, will
7 materialize.

8 **Q. HOW SHOULD SWEPCO'S REQUEST BE EVALUATED?**

9 A. Since the value of SWEPCO's request is based entirely on its claimed energy savings, its
10 proposal should be evaluated, at least in part, on how robust its assumptions are regarding
11 the magnitude of the Project costs and savings. If costs exceed savings under reasonable
12 assumptions other than those applied by SWEPCO, the Commission must conclude that
13 the Project is not in the public interest. Or, if approved, the Commission should establish
14 conditions so that these unbalanced risks are more evenly shared.

1

2

4

4

¹¹ Direct Testimony of Kelly Pearce at 7.

1 long-term forecast of SPP market energy prices, and the results were input into the
2 PLEXOS model.¹²

3 **Q. WHAT IS THE RESULT OF SWEPCO'S MODEL?**

4 A. SWEPCO's model results in a Project total net benefit of \$1.94 billion. Its revised
5 rebuttal model lowers this asserted benefit to \$1.50 billion. Included in this reduction is
6 the impact of lower FIT rates, which SWEPCO asserts reduces the PTC tax gross-up by
7 \$332 million and increases ADIT by \$87 million, for a net reduction of \$245 million.¹³

8 Table 1 provides the components of the resulting NPV as calculated by SWEPCO:¹⁴

¹² *Ibid.* at 9.

¹³ Revised Rebuttal Testimony of Kelly Pearce, Exhibit KDP-1R.

¹⁴ Direct Testimony of Kelly Pearce at 5 and Exhibit KDP-2R.

Table 1

Costs and Benefits	Amount (2021 – 2045) NPV (\$ Millions) As Filed	Amount (2021 – 2045) NPV (\$ Millions) Revised
Avoided Cost Benefits	\$3,974	\$3,973
Revenue Requirement of Wind Facilities and Gen-Tie	(\$3,906)	(\$3,819)
PTCs Including Tax Gross-Up	\$1,874	\$1,541
Deferred Tax Asset Carrying Charges	\$0	(\$300)
100% Additional OSS Margin	\$0	\$100
Net Benefits	\$1,942	\$1,495

Q. DID SWEPCO MODEL ANY OTHER CASES?

A. Yes, SWEPCO modeled a “Generic Wind Case” to test the feasibility and economics of a similarly sized project without the Gen-Tie. However, SWEPCO determined that adding 1,900 MW of wind in the same area of the Project without the Gen-Tie was not realistic given the expected magnitude of congestion that would be created, so instead it assumed 1,900 MW of wind resources were distributed and sourced from several delivery points in western Oklahoma, Kansas, Texas, Nebraska and Missouri.¹⁵ For the Generic Wind Case, SWEPCO assumed 7,991 GWhs of annual wind output, a purchase price of \$18.62/MWh (escalated at 2.25% per year), and contingency costs of \$90 million. Using these assumptions, SWEPCO determined that the Generic Wind Case results in customer savings that are \$686 million less than the estimated Project Case savings.¹⁶ SWEPCO believes that the Tax Act would have a similar impact on its Generic Wind Case as on its

¹⁵ Direct Testimony of Kelly Pearce at 14.

¹⁶ *Ibid.* at 14-15.

1 Project Case, so these customer savings would not materially change under lower tax rate
2 assumptions.¹⁷

3 **Q. DO YOU HAVE ANY INITIAL ISSUES WITH THE CASES MODELED?**

4 A. Yes. SWEPCO noted that its Base Case assumes no new development or purchase of
5 wind resources between 2021 and 2045. The Base Case reflects an approach to meeting
6 future energy needs of SWEPCO and PSO without additional wind generation.¹⁸ This
7 assumption is unrealistic given the amount of wind resources that are already in service
8 or being developed in the area, especially over the 25-year planning period reflected in
9 the models. The result of this assumption is to overstate the cost of the Base Case and
10 thus overstate the value of the Project Case and Generic Wind Case.

11 **Q. WHAT OTHER MODEL ASSUMPTIONS ARE YOU ADDRESSING?**

12 A. I have identified several assumptions that have a significant impact on the results of the
13 Company's analysis. As discussed below, these include cost and completion risk of the
14 Wind Facility, assumptions regarding output from the Wind Facility, cost and completion
15 risk of the Gen-Tie, and assumptions regarding natural gas price forecasts.

16 **A. Cost and Completion Risk of the Wind Facility**

17 **Q. PLEASE PROVIDE A BREAKDOWN OF THE ESTIMATED PROJECT COSTS**
18 **AND COMMERCIAL OPERATION DATE.**

19 A. The estimated Project costs include:¹⁹

¹⁷ Response to OPUC RFI 5-2.

¹⁸ Direct Testimony of Johannes Pfeifenberger at 8.

¹⁹ Direct Testimony of Michael Bright at 14-15.

1 MIPA Purchase Price – Membership Interests Purchase Agreement (MIPA) price is the
2 contractual purchase price for the Wind Facility.

3 Other Estimated Costs – Reflects the cost of associated projects necessary to complete
4 the Wind Facility, including the Tulsa North Substation interconnection facilities,
5 Western 765 kV generation substation contingency, O&M building contingency, changes
6 to Gen-Tie scope that impact the collection system design, O&M mobilization costs,
7 Gridliance operating fee, and capital spare parts.

8 Owners Costs & Overheads – Includes the direct cost for project management,
9 engineering and construction, personnel and expenses, legal and regulatory costs, O&M
10 mobilization, telecommunication and IT support and equipment, and overheads.

11 Contingencies – Covers potential changes to the scope of work, possible environmental
12 risk mitigation, potential changes to operations oversight, possible changes to security
13 requirements, and general estimating accuracy.

14 AFUDC – AFUDC is the cost of funds used to finance plant construction and included in
15 the project cost.

Table 2 summarizes these costs by component:²⁰

Table 2

Component	(\$million)
MIPA Purchase Price	\$2,694.0
Other Estimated Costs	\$90.2
Owner Costs & Overheads	\$22.6
Contingencies	\$93.3
AFUDC	\$1.9
Total Cost	\$2,902.0

The project will have a nameplate capacity of 2,000 MW, which is equal to a purchase cost of \$1,347/MW or total Project cost of \$1,451/MW.²¹ SWEPCO anticipates a commercial operation date (COD) in the fourth quarter of 2020.²²

Q. WHAT IS YOUR CONCERN REGARDING THE COST AND COMPLETION RISK OF THE WIND FACILITY?

A. There are several issues related to cost and completion risk. First is the expected completion date for the facility. Under current tax rules, the facility must be in operation by December 31, 2020 to earn 100% of the available PTCs, so a completion date late in 2020 does not leave room for error. Project completion after 2020 may result in SWEPCO's failure to qualify for PTCs.²³ If SWEPCO experiences any delays related to such issues as regulatory approvals, construction difficulties, environmental impacts or adverse weather, the necessary deadline could be missed.

Q. CAN SWEPCO MITIGATE SOME OF THESE RISKS?

²⁰ Direct Testimony of Michael Bright, Exhibit MLB-1.

²¹ $\$2,694 / 2,000 \text{ MW} = \$1,347/\text{MW}$; $\$2,902 / 2,000 \text{ MW} = \$1,451/\text{MW}$.

²² Direct Testimony of Michael Bright at 5.

²³ Direct Testimony of Jay Godfrey at 4-5.

1 A. SWEPCO reports it has certain mitigation strategies in place, such as delay liquidated
2 damages in the contract with GE for scheduled delivery of the wind turbine generators,
3 multiple turbine erection crews, use of multiple commissioning crews, ready contracts for
4 when the notice to proceed is received, and liquidated damages associated with
5 completion of the Wind Facility by Invenenergy.²⁴

6 Despite these measures, the Company has not yet received its requested
7 regulatory approvals, its construction and site studies are still ongoing, and weather is not
8 controllable, so these risks remain.

9 **Q. IS THERE AN ADDITIONAL RISK RELATED TO PTCS?**

10 A. Yes. ~~Most significantly, the U.S. House of Representatives recently proposed tax law~~
11 ~~changes that would repeal the current PTC inflation adjustment so that the credit amount~~
12 ~~would revert to 1.5 cents per kWh for the remaining portion of the 10 year eligibility~~
13 ~~period.²⁵ Because the current inflation adjusted credit is 2.4 cents per kWh, this proposal~~
14 ~~would reduce the value of PTCs by at least 38% over the life of the Project. This equates~~
15 ~~to a possible reduction in net benefits of at least \$712 million.²⁶ The change in the FIT~~
16 rate under the Tax Act has reduced AEP's tax liability that the PTCs offset. SWEPCO
17 states that AEP will still have a need for 100% of the Wind Catcher PTCs, but the timing
18 as to the year in which AEP can use the tax credits has changed. SWEPCO's latest

²⁴ Direct Testimony of Michael Bright at 11.

²⁵ ~~https://waysandmeansforms.house.gov/uploadedfiles/tax_cuts_and_jobs_act_section_by_section_hr1.pdf~~

²⁶ ~~From Exhibit KDP 1, the NPV of PTCs is \$1,874 million. 38% x \$1,874 million = \$712 million.~~

1 assessment indicates that there likely will be a delay in when AEP will have sufficient
2 taxable income against which to deduct the PTCs earned.

3 The effect of this change is that while SWEPCO plans to flow the PTCs' value
4 through to customers in the year they are earned, AEP will not fully utilize the PTCs in
5 that year. Therefore, SWEPCO proposes to create a deferred tax asset on the Company's
6 books for the un-utilized PTCs, and the return on the deferred tax asset would reduce the
7 customer benefits of the Project. Under the Company's assumptions, this deferral would
8 reduce customer benefits by \$300 million from the Company's original projections.²⁷

9 **Q. IS SWEPCO CERTAIN OF THE IMPACT OF THE DEFERRED TAX ASSET?**

10 A. No. SWEPCO admits that its updated long-term financial forecast incorporating the
11 changes in the Tax Act will not be completed until later this year. And in addition, its
12 forecast will only cover the period from 2018 to 2028, rather than the PTC period.²⁸
13 Therefore, the Company's projected impact is only an estimate.

14 **B. Generation Risk**

15 **Q. HOW DID THE COMPANY DEVELOP ITS ESTIMATE OF WIND FACILITY**
16 **GENERATION OUTPUT?**

17 A. Invenergy, the developer of the Wind Facility, retained DNV-GL to complete an
18 independent assessment of the wind resource and forecasted energy production for the
19 facility. SWEPCO explained that DNV-GL is the world's largest technical consultant for

²⁷ Revised Rebuttal Testimony of Paul Chodak at 8-9 and Exhibit KDP-2R.

²⁸ Ibid.

1 the renewable energy industry.²⁹ DNV assessed a number of variables related to
2 performance of the wind turbines and developed two estimates of the expected average
3 production from the facility over 25 years – Scenario A of 8,963.9 GWh/year and
4 Scenario B of 8,951.1 GWh/year. The estimates vary only in the degree of wake effects
5 present, and are within 0.1% of each other. The net capacity factor (NCF) of the Wind
6 Facility under both scenarios is 51.1%³⁰ and represents a P50 estimate.³¹ A P50 estimate
7 means that there is a 50% likelihood that the actual value will be equal to or greater than
8 the estimated value. Likewise, there is also a 50% likelihood that the actual value will be
9 less than estimated.

10 In addition, SWEPCO hired Simon Wind, an experienced wind consulting firm, to
11 independently review DNV's expected wind resource and forecasted annual net
12 generation.³² Simon Wind's analysis resulted in an estimated P50 NCF of 50.74% over
13 one year and 50.63% over ten years,³³ slightly lower than the DNV estimate. SWEPCO
14 concluded that the Simon Wind analysis confirms that the DNV production forecast is
15 acceptable and in line with methodologies used in the wind generation industry.³⁴

16 **Q. WHY IS THE NCF RELEVANT TO SWEPCO'S PROPOSAL?**

17 A. An NCF is the ratio of the actual output of a generating unit over a period of time to its
18 potential output if it were able to operate at full nameplate capacity. This factor is

²⁹ Direct Testimony of Jay Godfrey at 13.

³⁰ Direct Testimony of Jay Godfrey, Exhibit JFG-4 at 7.

³¹ *Ibid.* at 34.

³² Direct Testimony of Jay Godfrey at 14.

³³ Direct Testimony of Jay Godfrey, Exhibit JFG-6 at 3.

³⁴ Direct Testimony of Jay Godfrey at 14.

1 important because it relates to the amount of energy that can be delivered from the Wind
2 Facility. A higher NCF means more energy is delivered from the facility to the grid,
3 while a lower NCF means less energy is delivered.

4 **Q. WHAT IS YOUR CONCERN REGARDING GENERATION RISK?**

5 A. The economic analysis SWEPCO developed to support its application utilized the
6 Scenario B result developed by DNV,³⁵ but the Company did not prepare a sensitivity on
7 any other level of plant output.³⁶ Yet, the Company's consultants indicated a range of
8 variables and probabilities that contributed to their generation estimates. It is important
9 to note that there are no operating wind farms utilizing the proposed turbine
10 configuration, so this production risk is real.³⁷ If the plant output is less than forecast, the
11 value of the wind resource will be reduced, both in the amount of energy it can deliver
12 and the PTCs it can capture. For example, DNV's P90 estimate of generation is 8,161.7
13 GWh per year, which is equivalent to a 46.6% NCF. This is 9% less than the estimate
14 used in SWEPCO's models and equates to a reduction in net benefits of \$547 million.³⁸
15 SWEPCO provided an estimate of the reduction in net benefits for generation at a 44.7%
16 NCF of \$431 million under its revised rebuttal model.³⁹

17 **C. Cost and Completion Risk of the Gen-Tie**

18 **Q. WHY DOES SWEPCO ASSERT THAT THE GEN-TIE IS NECESSARY?**

³⁵ *Ibid.*

³⁶ Response to TIEC RFI 1-17.

³⁷ Response to TIEC RFI 1-16.

³⁸ Response to TIEC RFI 4-1.

³⁹ Response to TIEC RFI 4-1. Exhibit KDP-1R.

1 A. SWEPCO explains that the Oklahoma Panhandle has some of the best wind resources in
2 the country, but lacks sufficient transmission facilities to deliver that wind energy to
3 major load centers. The Gen-Tie will allow SWEPCO and PSO to fully realize the
4 benefits of those wind energy resources without incurring curtailments.⁴⁰

5 **Q. CAN THE WIND PROJECT BE CONNECTED DIRECTLY TO THE SPP**
6 **SYSTEM?**

7 A. SWEPCO claims that the Wind Facility cannot be interconnected directly to the SPP
8 system in the Oklahoma Panhandle without a significant investment in upgrades or
9 additions to the local transmission infrastructure. In addition, the Company expects
10 significant grid congestion with a direct interconnection even with these investments.⁴¹

11 **Q. WHAT IS YOUR CONCERN REGARDING THE COST AND COMPLETION**
12 **RISK OF THE GEN-TIE?**

13 A. There are several issues related to cost and completion risk. First, like the Wind Facility
14 itself, a delay in completion of the Gen-Tie might limit the number of PTCs that can be
15 earned because of the limited capacity of the alternative transmission options. Similar to
16 concerns regarding the Wind Facility, if there are any delays related to such issues as
17 regulatory approvals, construction difficulties, land acquisition, environmental impacts or
18 adverse weather, the deadline could be missed.

19 **Q. WHAT HAS SWEPCO DONE TO MITIGATE SOME OF THESE RISKS?**

⁴⁰ Direct Testimony of Robert Bradish at 6.

⁴¹ *Ibid.* at 5.

1 A. To manage its cost, the Gen-Tie will be constructed via a fixed-price Engineer, Procure,
2 Construct (EPC) contract with Quanta, a transmission construction contractor
3 specializing in designing, building and maintaining transmission systems,⁴² so price risk
4 should be minimized. Furthermore, the EPC contract requires delay liquidated damages
5 payments if the substantial completion date of the Gen-Tie exceeds the guaranteed
6 completion date of December 15, 2020. Liquidated damages, in aggregate, are capped at
7 the contract price.⁴³ The liquidated damages clause, however, will not completely
8 recover any lost production-based PTC value.⁴⁴

9 Despite these measures, the Company has not yet received its requested
10 regulatory approvals, its construction and land acquisition activities are still ongoing, and
11 weather is not controllable, so these risks to complete the Project still remain.

12 **Q. DOES SWEPCO HAVE A CONTINGENCY PLAN TO QUALIFY FOR 100% OF**
13 **PTCS SHOULD THE GEN-TIE NOT BE COMPLETED ON TIME?**

14 A. Yes. SWEPCO contracted with Invenergy to execute an alternative interconnection with
15 Gridliance, a regional transmission service provider, that will allow for commissioning,
16 completion and interconnection of completed wind facilities, and consequently,
17 qualification for the PTCs. But the Gridliance Interconnection Agreement (GIA)
18 provides for only 50 MW of interconnection service, so while it can be used for

⁴² Direct Testimony of Brian Weber at 7.

⁴³ *Ibid.* at 13.

⁴⁴ Response to OPUC RFI 2-2.

1 commissioning of the wind facilities, it cannot provide the full benefit of the wind energy
2 production or PTCs.⁴⁵

3 **Q. DO YOU HAVE OTHER CONCERNS REGARDING THE COST AND**
4 **COMPLETION RISK OF THE GEN-TIE?**

5 A. Yes. A second concern is the mismatch of service lives between the Wind Facility and
6 the Gen-Tie. The Wind Facility is expected to have a 25-year life, yet the Gen-Tie is
7 expected to remain in service for 50 years.⁴⁶ SWEPCO suggests that one potential use of
8 the Gen-Tie after the Wind Facility reaches the end of its service life would be to
9 interconnect other existing, re-powered or new wind facilities located in that same wind
10 resource rich region of SPP. Alternatively, network integration of the Gen-Tie into the
11 then-existing SPP system would be possible.⁴⁷ While these alternatives might generate
12 transmission revenues that SWEPCO can credit to customers to offset the capital cost of
13 the Gen-Tie, SWEPCO has not estimated the amount of any such potential revenues.⁴⁸

14 **Q. WHAT IS THE IMPACT IF THE SERVICE LIFE OF THE GEN-TIE IS**
15 **SHORTENED TO 25 YEARS TO MATCH THE LIFE OF THE WIND**
16 **PROJECT?**

17 A. SWEPCO calculated that if the Gen-Tie is depreciated at the same 25-year rate as the
18 Wind Facility, the total costs of the Gen-Tie would increase by approximately \$117
19 million on an NPV basis and the total net benefit of the wind project would be reduced

⁴⁵ Response to OPUC RFI 1-2.

⁴⁶ Direct Testimony of Robert Bradish at 15.

⁴⁷ *Ibid.*

⁴⁸ Response to OPUC RFI 2-1.

1 from approximately \$1.94 billion to \$1.82 billion.⁴⁹ SWEPCO estimates that if the Gen-
2 Tie were depreciated at the same 25-year rate as the Wind Facility under the lower FIT
3 rate, total costs of the Gen-Tie would increase by approximately \$102 million on an NPV
4 basis.⁵⁰

5 **Q. WHAT IS THE IMPACT IF THE TOTAL PROJECT COSTS (WIND FACILITY**
6 **AND GEN-TIE) EXCEED SWEPCO'S ESTIMATED COST?**

7 A. SWEPCO estimates the total Project cost to be \$4.53 billion.⁵¹ If actual Project costs are
8 10% higher than estimated, then the net benefit to customers is reduced from
9 approximately \$1.94 billion to \$1.63 billion, or \$310 million.⁵² Under the lower FIT rate,
10 SWEPCO estimates the net benefit to customers is reduced by \$296 million.⁵³

11 **D. Natural Gas Price Risk**

12 **Q. WHY ARE NATURAL GAS PRICE FORECASTS RELEVANT TO SWEPCO'S**
13 **PROPOSAL?**

14 A. Natural gas price forecasts are relevant because gas prices set the marginal price for
15 electricity in the market. The price for natural gas essentially caps the price for wind
16 resources. The higher the gas price, the higher wind prices can go, and this improves the
17 Project's value. Conversely, if gas prices remain low, this results in lower wind energy
18 prices and thus reduces the Project's value to customers.

⁴⁹ Direct Testimony of Kelly Pearce at 13.

⁵⁰ Response to OPUC RFI 5-5.

⁵¹ \$2.90 billion (Wind Facility) + \$1.63 billion (Gen-Tie) = \$4.53 billion.

⁵² Response to TIEC RFI 4-1.

⁵³ Exhibit KDP-1R.

1 **Q. HOW WERE THE NATURAL GAS FORECASTS USED IN SWEPCO'S**
2 **MODELS DEVELOPED?**

3 A. The natural gas price forecasts were developed as part of AEP's fundamentals forecast,
4 which is a long-term, weather-normalized commodity market forecast. Along with a
5 Base Case forecast, AEP provided lower and upper band forecasts to reflect lower and
6 higher North American demand for electric generation and fuels.⁵⁴

7 **Q. HOW DOES A MARKET-BASED FORECAST DIFFER FROM A**
8 **FUNDAMENTALS FORECAST?**

9 A. A market-based forecast reflects market participants' expectations for future prices.
10 These prices are gathered and reported daily by various outlets. The New York
11 Mercantile Exchange (NYMEX) provides a report of natural gas prices that are not
12 strictly a forecast, but rather a set of future prices at which market participants are willing
13 to enter into natural gas transactions. These prices will move up and down over time as
14 market participants' expectations change. On the other hand, a fundamentals forecast
15 relies on a model that considers the relationship between fundamental components of the
16 economy. For example, model inputs might include natural gas supply and demand
17 forecasts, forecasts of competing energy resources, inflation rates, etc. The model will
18 generate a set of gas prices based on the relationship between these inputs.

19 **Q. HOW DO THESE FORECASTS COMPARE?**

20 A. The fundamentals forecast is derived from forecasts of other components of the economy,
21 so it is only as good as the forecast of these variables. The quality of these input

⁵⁴ Direct Testimony of Karl Bletzacker at 3-4.

1 forecasts will drive the quality of the resulting natural gas price forecasts. And once
2 developed, the natural gas price forecasts are fixed until the model is run again with
3 updated inputs. For example, AEP's forecast was prepared in October 2016, and has not
4 been updated.⁵⁵ Conversely, a market-based forecast is constantly updated as market
5 participants consider changes that impact the market. Buyers and sellers of futures
6 contracts set the price for natural gas, and market-based indices are typically used in
7 natural gas supply agreements to set the price at which natural gas is purchased.

8 **Q. HOW DO THE GAS PRICE FORECASTS PROVIDED BY AEP COMPARE?**

9 A. As I mentioned, AEP provided to SWEPCO a Base Case natural gas price forecast, along
10 with lower and upper band forecasts to reflect lower and higher North American demand
11 for electric generation and fuels. The prices are for the Henry Hub, which is located in
12 South Louisiana and is a significant natural gas market hub as well as the pricing point
13 for NYMEX futures prices.

14 Figure 1 is a graphical presentation of AEP's three gas price forecasts:

15 Figure 1

⁵⁵ Response to OPUC RFI 2-12.

Q. WHAT IS THE IMPACT OF THESE SENSITIVITIES ON THE COMPANY'S NET ENERGY SAVINGS CALCULATIONS?

A. Table 3 shows the impact of the three gas price forecast cases on SWEPCO's claimed project savings:⁵⁶

Table 3

AEP Gas Price Forecast	NPV Savings (\$ million)	
	As Filed	Revised
High	\$2,353	\$1,932
Base	\$1,942	\$1,495
Low	\$1,593	\$1,114

As can be seen, as the gas price forecast declines, so does the value of the Project.

Q. SHOULD OTHER GAS PRICE FORECASTS BE CONSIDERED?

A. Yes. Because the natural gas price forecast is such a significant driver of the Project's economics, other forecasts should be considered. Since future natural gas prices are

⁵⁶ Direct Testimony of Kelly Pearce, Exhibit KDP-2 and Exhibit KDP-2R.

1 unknown, it is critical for the Commission to know how the economics of the Project are
2 impacted by prices other than those presented by SWEPCO.

3 **Q. HOW DO NYMEX FUTURES PRICES COMPARE TO THE COMPANY'S GAS**
4 **PRICE FORECASTS?**

5 A. I prepared a more recent NYMEX futures price forecast, using closing prices from
6 November 28, 2017. Figure 2 compares AEP's gas price forecasts against the NYMEX
7 | prices:

Figure 2

It can be seen that the NYMEX gas prices are much lower than all three of AEP's projected prices throughout the forecast period. Current natural gas prices are in the range of \$3/MMBtu, and the NYMEX suggests that natural gas prices will remain in that range for several years. AEP's forecasts predict that average natural gas prices will rise more than 50% next year, which SWEPCO attributes to changes in the weather.⁵⁷

Q. WHAT IS THE IMPACT OF USING A LOWER GAS PRICE FORECAST ON PROJECT ECONOMICS?

A. In response to discovery, SWEPCO prepared an analysis of the impact on project economics of an "Ultra-Low" gas price forecast, which reflected a 50% reduction to AEP's Low Case forecast.⁵⁸ The result of this analysis is an NPV benefit of \$454.

⁵⁷ Response to OPUC RFI 2-14.

⁵⁸ Response to CARD RFI 2-58.

1 million, which is \$1,488 million, or 77%, lower than SWEPCO's claimed benefit of
2 \$1,942 million. Notably, under SWEPCO's revised rebuttal model, the "Ultra-Low" gas
3 price forecast yields a net cost to customers of \$74 million.⁵⁹ SWEPCO calls its "Ultra-
4 Low" forecast "implausible,"⁶⁰ but while SWEPCO's "Ultra-Low" gas prices are 27%
5 lower than current market prices, its Base gas prices are 53% higher than current market
6 prices. This is no less implausible.

7 **Q. PLEASE SUMMARIZE THE REDUCTIONS TO NET BENEFITS FOR EACH**
8 **OF THE RISKS YOU DISCUSSED.**

9 A. To the extent that they could be quantified, Table 4 summarizes the reductions to net
10 benefits of the risks I discussed in my testimony:

⁵⁹ Response to ETEC-NTEC RFI 3-1, Attachment I.

⁶⁰ Revised Rebuttal Testimony of Kelly Pearce at 5.

Table 4

Risk Issue	NPV Impact (\$ million) As Filed	NPV Impact (\$ million) Revised
The value of PTCs is reduced due to changes <u>reduction</u> in tax law credit <u>amount</u>	(\$712)	\$0
Net benefits reduced due to lower tax rate (1)	\$0	(\$245)
Return on PTC deferred tax asset (1)	\$0	(\$300)
Energy savings are reduced due to a lower NCF of the Wind Facility	(\$547)	(\$431)
Gen-Tie is depreciated over same time period as the Wind Facility	(\$117)	(\$102)
Revenue requirement is increased due to higher Project costs	(\$310)	(\$296)
Energy savings are reduced due to lower natural gas prices	(\$1,488)	(\$1,569)
Total Impact	(\$3,174)	(\$2,398)

(1) Not included in Total Impact as it is already included in SWEPCO's Project net benefits.

As can be seen, the total negative impact of these risks more than offsets the proposed Project net benefits of \$1,942 million or \$1,495 million under the revised rebuttal model.

Q. WHAT DO YOU RECOMMEND IN LIGHT OF THESE RISKS?

A. SWEPCO's estimate of benefits is very uncertain, while placing all risk on ratepayers if the claimed benefits do not materialize. Therefore, for the Company's application to be in the public interest, the Commission should require that the following conditions be met:

1. The Wind Facility capital costs must be capped at \$1,451 per kW, which is inclusive of the purchase price and all associated costs.
2. The Gen-Tie capital costs must be capped at the contracted fixed price amount of \$1.62 billion.
3. Customers must receive the benefit in reduced fuel expense and PTCs based on a minimum Wind Facility NCF of 51.1%, regardless of whether the actual NCF is lower.

1 4. Customers must be credited at the 100% level of PTCs, regardless of whether
2 SWEPCO qualifies for the PTCs or not.

3 5. SWEPCO must guarantee energy savings to customers based on its Base Case
4 forecasted natural gas prices, regardless of actual market prices.

5 **Q. DO THE COMPANY'S PROPOSED GUARANTEES IN ITS REVISED**
6 **REBUTTAL TESTIMONY SATISFY THE RISKS YOU IDENTIFIED?**

7 **A. No, they do not.**

8 **Q. PLEASE EXPLAIN WHY NOT.**

9 **A. First, SWEPCO guarantees a cost cap of 109% of the estimated cost of the Project. But**
10 **this cap excludes AFUDC of approximately \$2 million.⁶¹ More importantly, the**
11 **guarantee excludes force majeure and changes in law, so customers still bear the entire**
12 **risk of any additional costs incurred from these outside events.**

13 **Second, SWEPCO guarantees it will qualify for 100% of the value of PTCs. But**
14 **without the value of the PTCs, the Project provides no economic value to customers,⁶² so**
15 **the Project would not be viable at all. Furthermore, even with the guarantee, the**
16 **Company has provided no method by which customers would be "made whole" by the**
17 **loss of PTCs.**

18 **Third, SWEPCO guarantees minimum annual production from the Project**
19 **equivalent to a 44.7% NCF. This level of production corresponds to SWEPCO's P95**
20 **estimate, meaning that there is only a 5% probability the actual production will be less**
21 **than the guaranteed level so is not a meaningful guarantee at this level.**

⁶¹ Direct Testimony of Michael Bright at 16 and Direct Testimony of Brian Weber at 5.

⁶² See Exhibit KDP-2R. Total benefit according to SWEPCO is \$1,495 million, but the value of the PTCs is \$1,541 million. Thus, the Project results in a net cost of \$46 million without the PTCs.

1 Fourth, SWEPCO guarantees to flow through 100% of incremental off-system
2 energy sales margins and net proceeds from the sale of renewable energy credits to
3 customers. Since these off-system sales and renewable energy credits would be
4 generated by facilities paid for entirely by customers, it would be unreasonable for these
5 revenues not to be fully credited to customers.

6 **VII. SWEPCO'S REQUESTED COST RECOVERY**

7 **Q. WHAT RATE RELIEF IS SWEPCO REQUESTING IN ITS APPLICATION?**

8 A. SWEPCO is requesting that the Commission:

- 9 1. Find that a good cause exception to 16 TAC § 25.236 is warranted to allow it to
10 pass the Project revenue requirement and PTCs to customers through fuel expense
11 until the Project is included in its base rates;
- 12 2. Approve its request to include any PTCs deferred for ratemaking purposes in a
13 regulatory liability that is included in rate base and earns interest at the
14 Company's pre-tax WACC from the commercial operation date of the Project;
- 15 3. Approve its request to include any unrealized PTCs in a deferred tax asset
16 included in rate base in the event the PTCs cannot be fully utilized in a given
17 year;
- 18 4. Approve the requested depreciation rates for the Wind Facility and associated
19 Gen-Tie; and
- 20 5. Approve its request to defer certain PTCs for credit beyond 10 years of
21 production.

22 **Q. WHAT RATE RELIEF ARE YOU ADDRESSING?**

23 A. I am addressing: a) SWEPCO's request for a good cause exception to 16 TAC § 25.236
24 to allow it to pass the Project revenue requirement and PTCs to customers through fuel
25 expense until the Project is included in its base rates, and b) the Company's request to
26 defer certain PTCs for credit beyond 10 years of production.

1 **Q. PLEASE EXPLAIN SWEPCO'S REQUEST FOR A GOOD CAUSE EXCEPTION**
2 **TO THE FUEL RULE.**

3 A. SWEPCO believes that since fuel costs will be immediately impacted by low cost wind
4 energy once the wind project is operating, it should also be able to credit the Project
5 revenue requirement and PTCs against fuel expense until such time as the Project is
6 included in SWEPCO's base rates. Absent this approval, the Company will retain any
7 PTCs obtained until such time as the Project revenue requirement is included in rates.
8 SWEPCO anticipates that the PTCs will also be credited to base rates at that time.⁶³
9 SWEPCO estimates the net effect of lower energy costs and added revenue requirement
10 due to the wind project is a decrease of approximately 1% to an average customer's bill
11 in the first year of operations.⁶⁴

12 **Q. DO YOU AGREE WITH SWEPCO'S REQUEST FOR AN EXCEPTION TO THE**
13 **FUEL RULE?**

14 A. No, I do not. Section 25.236(a) of the Commission's rules defines eligible fuel expenses
15 as those properly recorded in the Federal Energy Regulatory Commission (FERC) fuel-
16 related accounts. The wind project's revenue requirement does not fall into any of these
17 accounts. SWEPCO claims that it qualifies for a special circumstances exception
18 because its proposal lowers fuel expenses from what would otherwise be the case. And
19 while Section 25.236(a)(7) provides that an electric utility may recover as eligible fuel
20 expenses fuel or fuel-related expenses otherwise excluded if it can demonstrate that such

⁶³ Direct Testimony of John Aaron at 8.

⁶⁴ Direct Testimony of Venita McCellon-Allen at 21-22.

1 treatment is justified by special circumstances, the Commission is not obligated to allow
2 it.

3 SWEPCO's proposal is simply a mechanism to eliminate the normal effects of
4 regulatory lag. But the Company has other mechanisms available to it to minimize any
5 lag in recovery of its project revenue requirement. For example, it can file a base rate
6 case as soon as the wind project is in service. SWEPCO can also request interim rates
7 that will further reduce the time lag. The fuel factor was designed to allow a utility the
8 opportunity to collect fuel costs on an interim basis because fuel costs are often subject to
9 volatility-driven market forces outside the control of the utility. It was not designed to
10 avoid regulatory lag.

11 **Q. DO YOU HAVE ANOTHER RECOMMENDATION?**

12 A. Yes. SWEPCO seems to expect that PTCs will be reflected in base rates once the Project
13 revenue requirement is included in base rates. But this treatment will not necessarily
14 allow customers to receive the full benefit of the value of the PTCs, since PTCs are
15 proportional to generation output and in base rates the level of PTCs will only be adjusted
16 in a subsequent base rate case. In order to avoid this situation, I recommend that the
17 PTCs be credited to fuel expense so that customers receive the full benefit of the PTCs in
18 a timely manner.

19 **Q. PLEASE EXPLAIN SWEPCO'S PROPOSAL TO DEFER CERTAIN PTCs.**

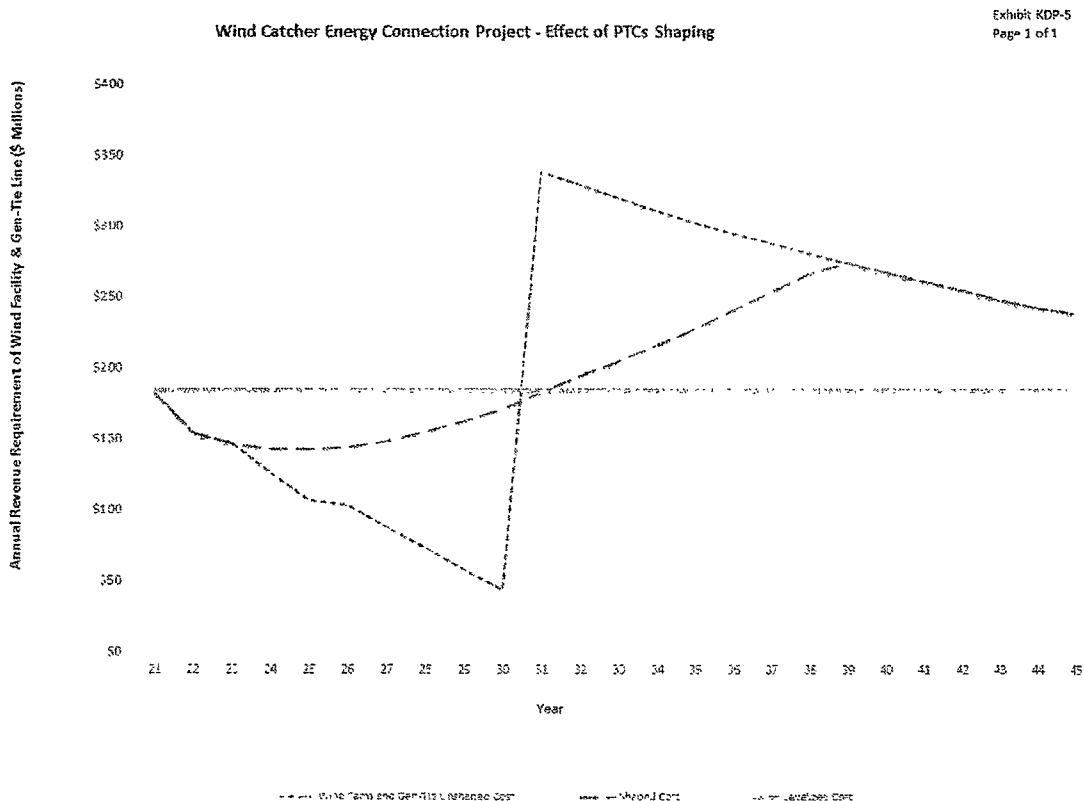

20 A. The value of the PTCs grows over time until their expiration after 10 years of production,
21 or 2030. The Company is proposing to defer, for rate-making purposes, some of the
22 value of the PTCs beginning in 2024 through 2030. This would be accomplished by

establishing a regulatory liability, and then returning this value to customers beginning in 2031 until the entire liability has all been returned in the form of credits to customers. The result of this “shaping” of PTCs is that the revenue requirement does not result in a decrease from 2021 to 2030 followed by an increase in 2031.⁶⁵

Q. WHAT DOES SWEPCO MEAN BY “SHAPING” THE PTCs?

A. Figure 3 reproduces SWEPCO Exhibit KDP-5 which compares the annual revenue requirement impact before and after “shaping” the PTCs.⁶⁶

Figure 3

⁶⁵ Direct Testimony of Kelly Pearce at 18.

⁶⁶ Direct Testimony of Kelly Pearce, Exhibit KDP-5.

1 As can be seen, “shaping” the PTCs reduces customer credits during the first 10 years of
2 production, but returns those credits after 10 years to dampen the increase in revenue
3 requirement that would otherwise occur. SWEPCO’s proposal is modeled so that the
4 NPV is the same under both the original and “shaped” cases.⁶⁷

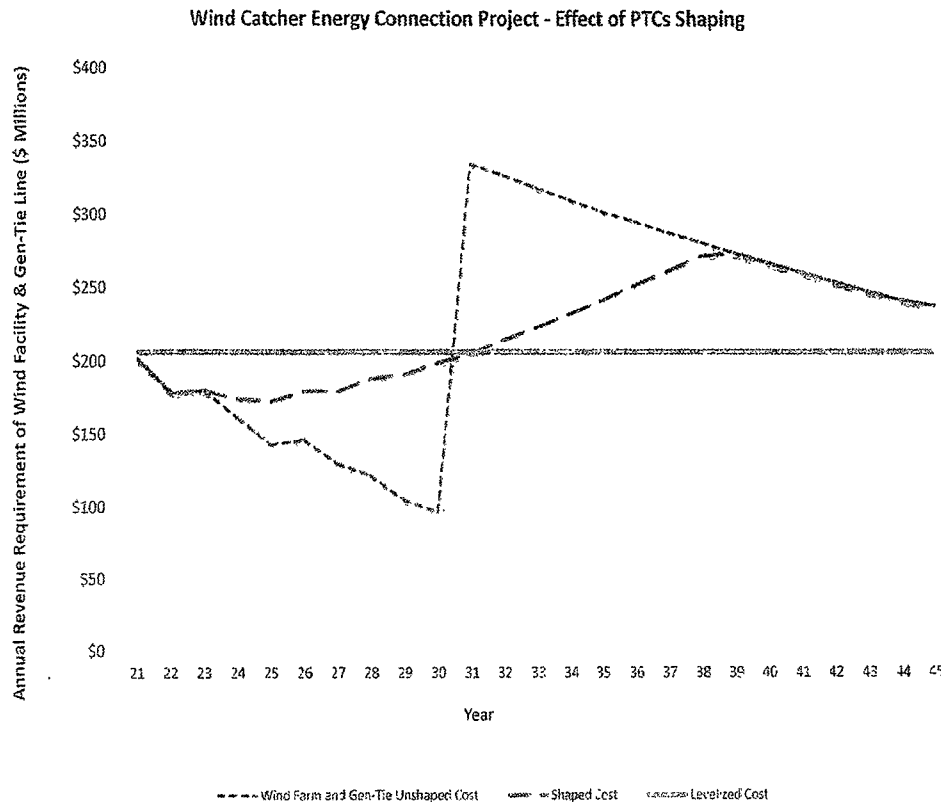

5 **Q. HOW DOES THIS CURVE CHANGE UNDER THE COMPANY’S REVISED**
6 **REBUTTAL MODEL?**

7 **A. Figure 4 shows this curve under the revised rebuttal model:**⁶⁸

8 Figure 4

⁶⁷ Direct Testimony of Kelly Pearce, Exhibit KDP-6.

⁶⁸ Response to OPUC RFI 5-3, Attachment 1.

SOAH Docket No. 473-17-5481
PUC Docket No. 47461
OPUC's 5th Q. # 5-3
Attachment 1

As can be seen, the general shape of the curve is the same, but both the annual revenue requirement and levelized cost are higher.

Q. DO YOU AGREE WITH SWEPCO'S PROPOSAL TO DEFER THESE PTCs?

A. No, I do not. First, the Project revenue requirement, although significant, is only 16% of SWEPCO's total current revenue requirement.⁶⁹ Furthermore, SWEPCO proposes to defer \$375.8 million of PTCs, which corresponds to 14% of the total PTCs earned.⁷⁰

This indicates that the amount of revenue requirement at stake is only about 2% (16% x

⁶⁹ $\frac{\$1,823 \text{ million}}{25} = \73 million ; $\frac{\$73 \text{ million}}{(\$370 \text{ million} + \$73 \text{ million})} = 16\%$.

⁷⁰ From Exhibit KDP-1, the nominal value of PTCs is \$2,775 million. $\frac{\$375.8 \text{ million}}{\$2,775 \text{ million}} = 14\%$.

1 14%). In addition, SWEPCO's calculations of the value of the deferred PTCs are based
2 on assumptions regarding ratemaking treatments, interest rates, inflation, and the value of
3 PTCs in the future which are all likely to change. And it is uncertain what other relief
4 SWEPCO might be requesting 10 years from now, so any impact of the proposed PTC
5 deferral might well be offset by other ratemaking changes at that time. Finally, it is not
6 likely that SWEPCO will file for annual rate changes, so even if PTCs are included in
7 fuel expense much of the revenue requirement volatility noted by SWEPCO will not be
8 experienced in rates. I agree with SWEPCO that there is no one "right" way to perform
9 this shaping,⁷¹ and in fact there is no "right" way at all, so would recommend that PTCs
10 not be deferred but instead be credited to customers as soon as they are available.

11 **Q. DOES THIS CONCLUDE YOUR TESTIMONY?**

12 A. Yes, it does.
