Exhibit THB-S-1	Cash Flow Analysis
-----------------	--------------------

1                   I.     INTRODUCTION AND PURPOSE OF TESTIMONY

2     Q.     PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

3     A.     My name is Theodore H. Bunting. My business address is 639 Loyola  
4            Avenue, New Orleans, Louisiana 70113.

5

6     Q.     DID YOU PREVIOUSLY FILE DIRECT AND REBUTTAL TESTIMONY  
7            ON BEHALF OF ENTERGY GULF STATES, INC. ("EGSI" OR "THE  
8            COMPANY") IN THIS PROCEEDING?

9     A.     Yes, I did.

10

11    Q.     WHAT IS THE PURPOSE OF THIS NEW TESTIMONY?

12    A.     The purpose of this testimony is to discuss the overall financial results of  
13            the Non-Unanimous Settlement ("NUS") reached by the Company and  
14            certain other intervening parties. To provide relevant context for my  
15            discussion, I first summarize the Company's current financial condition  
16            and discuss its recent financial results. I then discuss the overall financial  
17            impacts that result from the NUS.

18

19    Q.     DO YOU SPONSOR ANY EXHIBITS OR SCHEDULES IN THIS FILING?

20    A.     Yes. I sponsor the Exhibit listed in my Table of Contents.

1                                   II.     EGSI'S CURRENT FINANCIAL CONDITION

2     Q.     CAN YOU PLEASE RECAP THE COMPANY'S CURRENT FINANCIAL  
3             CONDITION VIEWED FROM THE INVESTOR PERSPECTIVE?

4     A.     Yes. My direct testimony emphasized the need for improvement in the  
5             Company's financial condition to address ongoing challenges including:  
6             1) continuing preparation for the potential transition to competition in the  
7             Company's service area; 2) a substantial capital improvements program  
8             involving \$415 million in additional capital expenditures in 2007-2009; 3)  
9             the Company's exposure to event risk from catastrophic storms and the  
10            impact of that exposure on its access to capital; and 4) the ability to  
11            refinance \$1 billion of long term debt on reasonable terms. These  
12            financial challenges provide important perspective when considering the  
13            Company's financial condition from the perspectives of both equity  
14            investors and debtholders.

15            My direct and rebuttal testimony, as well as the direct testimony of  
16            Company witness Jay Lewis and the rebuttal testimony of Company  
17            witness Steven Fetter, address both the credit and equity perspectives. In  
18            brief, from the equity investor perspective, as reported in Table 1 to the  
19            direct testimony of the Company's Vice President and Chief Financial  
20            Officer, Utility Operations Group, Jay Lewis, the Company has not earned  
21            its authorized return in any year since 1999. While its current authorized  
22            return on equity is 10.95%, its earned average return for the period  
23            1999-2006 was only 7.83% and its earned average return on equity for the

1           period 2004-2006 was only 7.07%. Clearly, the Company's current rates  
2           have not resulted in a reasonable return for equity investors.

3           In addition, as supported by the rebuttal testimony of Mr. Fetter,  
4           1) the credit profile for the Company's Texas operations is relatively weak  
5           for an integrated utility, 2) that weak profile remains the status quo after  
6           completion of the Company's jurisdictional separation, and 3) without a  
7           rate increase, the Company's financial integrity would be harmed. The  
8           Company's secured and corporate issuer bond ratings straddle the divide  
9           between investment and non-investment grade while rating agencies such  
10          as Moody's have emphasized that a "key driver" of the Company's credit  
11          rating will be the outcome of this proceeding.<sup>1</sup>

12          Finally, the cash flow analysis (on a Texas Retail basis) I provided  
13          in my rebuttal testimony provides evidence that, without a rate increase in  
14          this case, the Company faces a very large (\$82 million) deficit in the  
15          amount of cash flow available to finance the ongoing infrastructure  
16          improvements needed to continue to support reliable service.

17

18   Q.   WHAT IS THE CONCLUSION YOU DRAW FROM THIS FINANCIAL  
19          PICTURE?

20          It is fair to say that this rate case represents a financial turning point for  
21          the Company. The result in the case will determine whether the

---

<sup>1</sup>       Moody's Credit Opinion: Entergy Gulf States, Inc. (8-May-2007).

1           Company, after a long period of sub-standard equity returns and  
2           prolonged weakness in its overall financial condition, can begin the  
3           process of improving that condition.

4

5                           III.     OVERALL FINANCIAL IMPACT OF THE NUS

6     Q.     PLEASE COMPARE THE OVERALL RESULT OF THE NUS TO THE  
7           COMPANY'S FILED CASE.

8     A.     The Company's filed case called for a \$64.3 million base rate increase. In  
9           combination with the riders requested by the Company, the revenues from  
10          Miscellaneous Electric Services, and offsetting the elimination of the  
11          Company's Incremental Purchased Capacity Rider ("IPCR"), the total  
12          revenue increase was approximately \$112.5 million. This increase  
13          reflected an 11% return on equity, as supported by the direct and rebuttal  
14          testimony of Company witness Samuel C. Hadaway.

15                 The NUS provides for a two step rate increase. The first step is  
16          \$42.5 million, and is effective the first billing cycle of October 2008. The  
17          second step is \$17 million, and is effective the first billing cycle of October  
18          2009. As shown in the testimony of Company witness J. David Wright in  
19          support of the NUS (reflecting base rates, riders, and the elimination of the  
20          IPCR), the cumulative revenue requirement increase after the second step  
21          rate increase is approximately \$54.2 million. This is approximately 48% of  
22          the Company's total filed request.

1 Q. WHAT RETURN ON EQUITY RESULTS FROM THE NUS RATE  
2 INCREASE?

3 A. As discussed in the testimony of Company witness J. David Wright, strictly  
4 within the context of the overall set of compromises and benefits that  
5 result from the NUS, the Company is assuming a return on equity of  
6 9.95%. This ROE is comparable to the recommendations of TIEC witness  
7 Gorman (9.96%) and Staff witness Cutter (10.07%). The ROE resulting  
8 from the NUS falls short of a market-competitive return on equity, as  
9 discussed in the testimony of Dr. Hadaway. However, as I next explain,  
10 the cash flows from the NUS rate increase do provide for material  
11 improvement in the Company's financial condition and increased liquidity  
12 and financing capability, and thus the NUS is an important step in  
13 improving the Company's financial condition.

14

15 Q. WHAT ARE THE CASH FLOW IMPACTS ASSOCIATED WITH THE NUS  
16 RATE INCREASE?

17 A. The \$59.5 million rate increase should provide additional cash flow of  
18 approximately \$36 million on an after-tax basis. The cash flow scenarios  
19 that I included in my rebuttal testimony provide a reasonable point of  
20 comparison for purposes of assessing the NUS cash flow outcome, and I  
21 have attached those scenarios again as Exhibit THB-S-1 to my testimony.

22 Consideration of the NUS increase in conjunction with the "without  
23 rate increase" cash flow scenario in Exhibit THB-S-1 indicates that the

1 additional cash flow of approximately \$36 million from the NUS rate  
2 increase would reduce the cash flow deficit in relation to the "without rate  
3 increase" cash flow scenario. The NUS result, however, still results in a  
4 deficit cash flow position. Accordingly, despite the NUS rate increase, the  
5 Company will likely need to access the capital markets in order to finance  
6 infrastructure improvements.

7

8 Q. WHAT IS THE LIKELY EFFECT OF THE NUS RATE INCREASE ON  
9 THE COMPANY'S CREDIT RATING?

10 A. In all likelihood, the NUS increase should be viewed as an encouraging  
11 development by rating agencies and the credit markets, although it falls  
12 short of the Company's requested level of rate relief. As I mentioned  
13 above, developments in this case are monitored by rating agencies such  
14 as Moody's, which has identified the outcome of the case as a key  
15 element of its credit rating analysis. The NUS provides a settled result  
16 acceptable to the Company and the other NUS Signatories, and it  
17 contributes materially to improvement in cash flow, which is one of the  
18 most important elements of the credit rating process. In sum, it is  
19 reasonable to expect that the NUS rate increase will help to solidify the  
20 Company's current credit ratings, whereas the absence of a rate increase,  
21 or a rate decrease, would threaten those ratings. In short, the NUS rate  
22 increase represents a solid step for the Company on the road to financial  
23 health.

1 Q. DO YOU HAVE ANY ADDITIONAL COMMENTS ON THE MANNER AND  
2 TIMING OF THE REVENUE INCREASES RESULTING FROM THE  
3 NUS?

4 A. Yes. Company witness Bruce M. Louiselle addresses how Rough  
5 Production Cost Equalization ("RPCE") payments are implemented in  
6 connection with the NUS. However, from an overall financial perspective,  
7 it is important to understand that the NUS allows the Company to retain an  
8 additional amount of RPCE payments of \$17 million effective with the first  
9 billing cycle of January 2009. This situation continues, however, only until  
10 the second step rate increase in October 2009, at which time base rates  
11 are increased by \$17 million, and the additional \$17 million retention of  
12 RPCE payments ceases. The retention of additional RPCE payments  
13 from January – September 2009 allows the Company to bridge the  
14 financial gap between the first and second steps of the rate increase. It  
15 provides the Company with the opportunity to improve its financial  
16 condition in the manner I just discussed at the outset of 2009, instead of  
17 delaying that improvement to the time of the second step rate increase in  
18 October of 2009.

19

20 Q. WHAT IS YOUR ASSESSMENT OF THE OVERALL RESULTS OF THE  
21 NUS RATE INCREASE?

1     A.     The NUS represents an overall compromise and settlement of many  
2           competing interests and concerns of its Signatories. As Company witness  
3           Louiselle discusses, its reasonableness should be judged in light of its  
4           overall impacts. The NUS provides material improvement to the  
5           Company's financial condition, should allow it to strengthen its financial  
6           integrity, and provides overall rate levels acceptable to the NUS  
7           Signatories and the customer interests they represent. At the same time,  
8           as the Company moves forward, its still faces significant financial  
9           challenges and a cash flow deficit that will require continued ability to  
10          access the capital markets on reasonable terms. Though the NUS rate  
11          increase by no means eliminates these challenges, it should position the  
12          Company to maintain that reasonable access.

13

14    Q.     DOES THIS CONCLUDE YOUR TESTIMONY?

15    A.     Yes.

**Entergy Gulf States, Inc.**
