Sergio, thanks for the invitation. I'd love to hear what he has to say, but I don't want to make it uncomfortable if he's coming over to talk to you and/or Stuart. If he brings Lori I'll be glad to come over. If he doesn't I think it would be better if you guys met with him and we could talk later.

Stuart/Ferdie

Warren Lasher is coming over this Thursday afternoon to discuss their latest findings on the Gillespie Newton TL.

He is scheduled to be at the BTC at 1:30 PM. I have booked BTC-127 for this meeting.

Let me know if you would like to be part of this meeting.

Subject: All Five Scenarios

Sergio,

Attached is a summary of all five scenarios that we have been studying.

Please note that the alternative 5 can be further optimized by adding series compensation to one of the HHGT line sections. It provides more switching flexibility when compared with Alternative 4. If the NewStn switchyard is designed properly, it can always be converted to Alternative 4.

We would like to know your availability to discuss these results with you over a phone call today.

Thanks.

Subject: FW: Comparison of Alternatives
Attachments: Case Comparisons_r2.xls

Hi Stuart,

Since Sergio is not in his office today, here are the enhancements to our study comparison tables that you and Sergio had suggested. Please review and suggest improvements.

One more thing. We figured out that our gentie is passing over (or is close by to) LCRA's 138 kV substations Wolf Cr (Bus #7134) and Kerrst (#7138). These seem to be the load centers near Gillespie and I believe you and Sergio had pointed out one of those names in our phone meeting. We are hopeful that we may be able to partially or completely eliminate the need for the Kendall - Gillespie 345 kV line also, by tapping the gentie with a 345/138 kV autotransformer. We have just started that analysis and will let you know as soon as we are done.

Thanks.

From: Christman, Rob
Sent: Tuesday, June 22, 2010 4:12 PM
To: Gaudi, Madan
Cc: Busch, Dean; Cartwright, J F
Subject: Horse Hollow Gen Tie Transmission Line Rating

Madan,

Here are the criteria used to calculate the Horse Hollow Gen Tie line rating of 1737 MVA:

Emissivity = 0.7

Absorptivity = 0.8

Conductor bearing = 270 degrees

Sun day = June 21st

Sun time = 12 noon

Atmosphere = Clear

Conductor latitude = 31.09 degrees

Legal Hold - All E-Mails.txt
Conductor Elevation = 2425 feet above sea level
wind speed = 2.0 feet/second (1.36 mph)
Angle between wind and conductor = 90 degrees
Maximum conductor temperature = 100 degrees C
Ambient temperature = 40 degrees C

The previous rating used the same criteria except for wind speed and ambient temperature. A wind speed of 0 feet per second was used and the assumed ambient temperature was 42.2 degrees C. The line rating was 1271 MVA (2127 A) with these criteria.

The series capacitor at Horse Hollow has a rating of 1548 amps.

Thanks,

Rob

Subject: RE: letter to ERCOT

Sensitivity: Confidential

The letter looks good. The first sentence in option 1) is a little confusing. It discusses conversion of existing 138 kv and 69 kv lines. Did you mean re-build/upgrade 138 kv lines and convert 69kv lines? Also, would you connect the private line at Rockwood or would you do Bluff Creek or are both options explored?

Subject: letter to ERCOT

Legal Hold - All E-Mails.txt

Please see attached.

The 5 suggestions are still under development and I might have different language before this is finalized/sent. We are conducting a brief study/validation at this time.

Ross, with your approval, I suggest we send this letter or something similar to Dan by Friday of this week.

Sergio

Subject: CREZ
Location: LCRA Offices - 6800 Burleson Road

Start: Tue 6/22/2010 10:00 AM
End: Tue 6/22/2010 11:00 AM
Show Time As: Tentative

Recurrence: (none)

Meeting Status: Not yet responded

Organizer: Hayden, Jolly

CONFIDENTIAL ATTORNEY- CLIENT PRIVILEGED COMMUNICATION

Marcus,
would you please prepare a map depicting the "Rockwood Proposal." The map should depict the routing alternatives of which you are aware and should be provided to Ross, Stuart, John, and me. For the time being the map should not be distributed beyond persons on this list. Thanks and call me if you have any questions.

Marcus-

ERCOT wants a copy of a map with the NextEra TL that connect to Kendall. Stuart had a copy and I thought maybe you have the original. Can you send me an e-copy?

Or if one of you kind people (Sara / Stuart) can send me an e-copy if this came from you, that would be appreciated.

Sergio

Subject: RE: Smitherman questions on Gillespie to Newton at ERCOT Board

I watched the video from the link Bob forwarded and I thought Smitherman's questions were disturbing in many ways. As for the NextEra line, if it's been a positive

Legal Hold - All E-Mails.txt

factor I wonder if it's because it's moving wind energy that Horse Hollow would otherwise inject into the system in Abilene? While that's to the good, is that an incentive for other companies to build variations on a private line that, while not as long as NextEra's, would still bastardize the notion of certificating common carrier transmission lines that serve a public function? As for Clear Spring-Hutto, he asked Dan Woodfin that question during our open meeting and Dan told him -- correctly -- that CREZ had been modeled on the assumption that the Clear Springs-Salado line had already been built. We also received a letter from ERCOT last week stating that the GN line was still necessary. In other words, GN and Clear Springs-Salado are not connected. The fact that he keeps asking the question when he already knows the answer is troubling.

Subject: Smitherman questions on Gillespie to Newton at ERCOT Board

Here's the summary of Smitherman's attempt at transmission planning at the ERCOT Board yesterday...

Should you desire to watch it on TexasAdmin, go to "part 1" of the Board meeting then move the little ball at the bottom of the screen to 51 minutes and 14 seconds.

Give me a shout if you have any questions.

Sandy

There was general discussion on the CREZ line and Chairman Smitherman asked about the west to north congestion we continue to see in the double digit numbers. What if any transmission improvements are in the queue to relieve this situation either CREZ or non-CREZ. Saathoff said that is the main purpose of the CREZ projects. Smitherman said that in months with a lot of wind in the west, the wind is trying to make its way to other zones and pathways we have now are west to north and that causes congestion. Saathoff said yes, and the private line helped. Smitherman said that with all the CREZ they can move west to south without going through north. Arguably when we get to build out of the CREZ we will see more price convergence.

Smitherman continues to hear that with NG low, no one is building wind, but has he looks at the generation activity by fuel he sees a lot of wind activity. Saathoff said there are 40,000 MW of wind in the interconnection process (of about 70,000 MW). Finally, there is a description at what the regional planning group is looking at for improvements. He wants to follow up with Saathoff as to whether or not the Gillespie to Newton line is still necessary. With Clear Springs to Salado coming in, and the northern terminus in Salado is not too far from the proposed Newton substation, he wants to look at that. He also wants to look at the Twin Buttes to Brown reconfiguration to double circuit, then look at any of the other projects that fall in the \$ 678 million to see if there is some possibility to go some distance to relieving the transfer capability of the Gillespie to Newton line.

Ferdie-

In his letter, Mr. Weatherford raises three points that he associates with the Gillespie-Newton CREZ project that I believe need to be clarified. These are:

- 1) discussion at April 23 Open Meeting regarding need for the Gillespie station/and Gillespie to Newton TL;
- 2) the effect on CREZ of a new power plant at the existing TC Ferguson site; and,
- 3) the effect on CREZ of the recently constructed NextEra TL.

Regarding item 1, although this discussion came up at the Open Meeting, I believe that ERCOT staff was clear on the need for both the Gillespie station as a needed load integration point for CREZ as well as an end point the Gillespie to Newton 345 kV TL. In discussing this with ERCOT staff more recently, I understand that they plan to respond to this question in writing.

Regarding item 2, since this is a potential replacement of an existing 400 MW power plant, a potential different power plant at the existing TC Ferguson site does not change the need for the any of the CREZ projects identified in the ERCOT CTO Study. In its CTO study, ERCOT correctly included generation at the TC Ferguson site. Therefore, the possibility of LCRA replacing the existing TC Ferguson power plant with another power plant has no net effect on the need for CREZ projects as approved by the PUC. In fact, a larger, more efficient plant in the area has the potential to make the CREZ even more cost-effective due to the possibility of increased reactive capability.

Regarding item 3, in addition to being a private TL with restricted generation connectivity and having the flexibility to connect to another site (i.e., not to the Hill Country), the NextEra TL does not provide the same level of transmission capacity as the CREZ projects.

Please let me know if we need to discuss further.

Thanks
Sergio

Subject: FW: Dkt 37448 - Save Our Scenic Hill Country Environment Letter to the PUC Commissioners

Please see the attached letter from Robert Weatherford. He is the leader of Save Our Scenic Hill Country Environment (SOSHCE). He is raising fundamental questions about the existence of the Gillespie-Newton CREZ line and is tying those questions to the story that LCRA might replace the Ferguson Power Plant. I think I even saw a story in the clips this morning.

What can you tell me about the Ferguson issue and what it is exactly that LCRA is proposing to do there? Weatherford's notion that Ferguson could address local issues related to reliability, voltage stability, and increased demand are interesting but I don't think they address the existence of Gillespie-Newton as CREZ priority project.

Still, I'd like to know about Ferguson and what you think about Weatherford's thesis. Thanks.

**LCRA TRANSMISSION SERVICES CORPORATION'S RESPONSE TO
SEGREST ET AL'S FIRST REQUEST FOR INFORMATION**

Question No. 1-2:

Describe any oral communications between LCRA-TSC and Horse Hollow Generation Tie, LLC, NextEra Energy Resources, LLC, Florida Power & Light Company or any related entity regarding the possibility of including the privately-owned transmission line referred to as the "NextEra" line or "Gen-Tie" in the CREZ plan either to supplement or replace the McCamey D to Kendall to Gillespie lines and/or the Gillespie to Newton line. Your description should include, but not be limited to: date and time, approximate length of conversation, participants, location(s), subjects discussed, any documents or tangible things reviewed or discussed, and your best recollection of what each participant said.

Response No. 1-2:

To address several factors important to LCRA TSC, LCRA staff agreed to meetings, phone conferences and e-mail correspondence with Nextera, US Transmission Holdings and Lone Star employees concerning use of the generation tie, and these events are summarized below. These factors important to LCRA TSC were: 1) significant amount of landowner comments on the use of the generation tie, 2) public official comments on the use of the generation tie; and, 3) Nextera's proposal to use the generation tie. Specific documents or tangible things reviewed or discussed are included in Attachment 1 in the response to Question 1-1.

May 24, 2010 – David Turner, Project Director with Lone Star had a lunch meeting with Stuart Nelson (LCRA) which lasted approximately an hour. At the meeting, Mr. Turner provided a proposal for using the generation tie as an alternative to the McCamey D to Kendall to Gillespie and Gillespie to Newton transmission line projects. The proposal is attached as Segrest et al_1st_Q1-2_Attachment 1. The purpose of the meeting was to determine if LCRA TSC would consider submitting the proposal to ERCOT.
