

1 submitting the charge is most familiar with the charge, and is responsible
2 for applying the correct PC to the transaction. In addition, the employee's
3 budget coordinator may assist in determining the correct PC for a specific
4 cost.

5 In addition, several allocations, such as payroll and other loaders,
6 will create additional transactions. They will typically follow the PCs used
7 on the source transactions for which they are based.

8

9 Q71. PLEASE DESCRIBE THE TIME ENTRY SYSTEM USED BY THE
10 ENTERGY COMPANIES.

11 A. The Entergy Companies use the PeopleSoft Time & Labor system. This
12 system is an electronic time and attendance system and is an important
13 part of the Entergy Companies' cost and service tracking process.
14 Employees or timekeepers are responsible for populating electronic
15 timesheets each pay period with appropriate accounting codes, including
16 PCs, and actual hours worked, among other things. At the end of each
17 pay period, the employee's supervisor is responsible for reviewing and
18 approving the timesheet data.

1 Q72. PLEASE SUMMARIZE THE CONTROLS THAT ARE IN PLACE TO
2 ENSURE THE ACCURACY OF THE INFORMATION RECORDED ON
3 THE TIMESHEETS IN TIME & LABOR.

4 A. In addition to the individual responsibilities of employees and supervisors
5 described above, the Time & Labor system has been programmed with
6 certain validation functionality (e.g., validity and compatibility edits for the
7 accounting code input data) and notification procedures to alert the
8 employee when accounting code values, including PCs, are invalid,
9 incompatible, or incomplete. Training on the Time & Labor system is
10 conducted within each department. Assistance is also available through
11 the payroll administrator and through the Financial Processes Help Desk,
12 also referred to as the Financial Operations Center ("FOC") Help Desk.

13 Each ESI employee is ultimately responsible for charging the costs
14 that he or she incurs to the appropriate PC, and thus appropriately billing
15 the companies receiving the services. As a guide, ESI Time and Expense
16 Training materials are posted on the Affiliate Accounting and Allocations
17 section of the Entergy Companies' internal web. All ESI employees are
18 required to acknowledge their review of these training materials on an
19 annual basis. This training stresses the importance of choosing the
20 correct PC. It also discusses the role of billing methods in billing the
21 appropriate companies for services rendered, and emphasizes that direct
22 billing is preferred over allocating charges where possible. The training
23 also reviews how to determine which PC should be used for specific

1 services. These ESI Time and Expense Training materials are included
2 as Exhibit SBT-16.

3 As discussed earlier in my testimony, and as discussed in
4 Attachment 8 of Exhibit SBT-15, there are several other controls in place
5 to ensure that billings to affiliates properly reflect the actual cost of an item
6 or service.

7

8 Q73. HOW ARE PROJECT CODES INITIATED AND MADE AVAILABLE FOR
9 USE?

10 A. As I previously mentioned, the Entergy Companies use a project costing
11 application (PowerPlant) that provides a single point of entry for all PCs.
12 When a particular department determines that a new project or service is
13 being initiated, PowerPlant is used by that department to set up the PC.
14 During set-up, the preparer of the PC request enters several elements to
15 establish a PC. The preparer provides a descriptive title for the PC and
16 determines the appropriate billing method, which may directly bill one
17 affiliate or allocate costs to multiple affiliates. The billing method is
18 determined based on cost causation principles for the particular project.
19 The preparer also describes the scope of the PC, including its overall
20 purpose, the primary activities to be performed, the products or
21 deliverables expected, and a justification of the billing method selected.
22 This scope, as well as all of the attributes associated with the PC, are
23 stored in PowerPlant and can be referenced by users as needed.

1 Exhibit SBT-15 includes a more detailed discussion of the project
2 billing process used by ESI. A breakdown of ESI's billings by project code
3 is shown in Exhibit SBT-8.

4

5 Q74. DOES THE AFFILIATE BILLING PROCESS ENSURE THAT THE COSTS
6 CHARGED BY ESI TO ETI ARE NO HIGHER THAN THE COSTS
7 CHARGED TO OTHER AFFILIATES FOR THE SAME OR SIMILAR
8 ACTIVITIES AND SERVICES?

9 A. Yes. The following features of the billing system help ensure that ESI
10 does not charge a higher unit cost to ETI than to other affiliates for the
11 same or similar activities and services:

- 12 1) ESI always bills its services to regulated companies at cost, with no
13 profit added, based on cost causation;
- 14 2) the billing method is selected based on the principle of cost
15 causation to ensure that every affiliate that causes the cost in the
16 PC is appropriately included in the allocation of costs; and
- 17 3) because each PC has only one billing method associated with it, all
18 affiliates that receive the service are charged at the same unit rate
19 for a given PC; therefore, the cost for a given unit of service is
20 equal for all affiliates receiving the service.

21

22 Q75. HOW DOES THE AFFILIATE BILLING PROCESS ENSURE THAT THE
23 PRICE CHARGED BY ESI TO ETI REPRESENTS THE ACTUAL COST
24 OF SERVICES?

25 A. With respect to direct billings, because ESI charges no more than actual
26 costs for services provided to regulated companies, the price charged to

1 ETI represents the actual cost. With respect to allocated costs, because
2 ESI charges the regulated companies at cost and utilizes the principle of
3 cost causation in identifying a billing method, the unit price charged to ETI
4 represents the actual cost.

5

6 Q76. DOES YOUR TESTIMONY INCLUDE A SUMMARY OF CONTROLS TO
7 ENSURE THE ACCURACY OF THE ESI AFFILIATE BILLINGS?

8 A. Yes. Those controls are generally summarized in the Affiliate Billing
9 Process section of my testimony. In addition, these controls are
10 discussed in more detail in Attachment 8 of Exhibit SBT-15.

11

12 Q77. ARE THERE ANY REVIEWS OF THE CONTROLS OVER THE
13 ACTIVITIES AND SERVICES AND THE RELATED COSTS THAT ESI
14 PROVIDES?

15 A. Yes. Internal Audit reviews the controls and performs tests of transactions
16 and balances related to affiliate billings. Specifically in connection with the
17 Sarbanes-Oxley Act, Internal Audit reviews the risks, control activities, and
18 testing of those control activities associated with the affiliate billing
19 process. Their review includes the related funding, allocations, and
20 intercompany account reconciliation processes associated with the overall
21 affiliate billing process.

22 In addition, external reviews and audits of affiliate transactions and
23 processes are conducted routinely. For instance, D&T performs certain

1 agreed-upon procedures annually at the request of the Entergy
2 Companies to satisfy a requirement included in an October 1992
3 Settlement Agreement, as amended, between certain regulators and the
4 Entergy Companies that pertains to billings from Entergy affiliates to EEI.
5 D&T selects several intercompany transactions billed to EEI by Entergy
6 affiliates to ensure that they were billed in accordance with PUHCA 2005
7 affiliate billing requirements. D&T's "Independent Accountants' Report on
8 Applying Agreed-Upon Procedures" for the year ended December 31,
9 2012, is included as Attachment 9 to Exhibit SBT-15.

10 In addition, the annual external audit of Entergy Corporation and its
11 subsidiaries' financial statements performed by D&T helps to detect
12 whether the inter-company accounts and billing processes are producing
13 any material misstatements in the financial statements. The
14 Sarbanes-Oxley Act also requires that an independent auditor attest to the
15 accuracy of the Entergy Companies' disclosure regarding the
16 effectiveness of its internal controls. In this connection, D&T also reviews
17 risks, control activities, and testing of control activities associated with the
18 affiliate billing processes.

19 Further, in its oversight role under PUHCA 2005, the FERC is
20 authorized to conduct audits of Entergy service company transactions. As
21 discussed earlier in my testimony, the most recent FERC audit of
22 Entergy's four service companies, including ESI, covered the period
23 January 2006 through December 2008.

1 Q78. DO YOU HAVE ANY INDEPENDENT VERIFICATION THAT THE
2 CONTROLS ARE FUNCTIONING PROPERLY?

3 A. Yes. PwC performed an independent attestation examination of
4 management's assertion on the presentation of costs billed by ESI and
5 other Entergy affiliates to ETI for the twelve-months ended March 31,
6 2013.¹² PwC's attestation examination included, among other things:
7 1) consideration of controls surrounding the affiliate billing process;
8 2) documentation included in the PC scope statements, including a
9 description of the PC's use and purpose, the activities associated with that
10 particular project, the expected deliverables from activities in the project,
11 and justification for the billing method to be used for billing the costs
12 accumulated in the project; and 3) testing of affiliate service charges billed
13 during the test year for this docket.

14

15 Q79. PLEASE EXPLAIN WHAT YOU MEAN BY "PC SCOPE STATEMENTS."

16 A. A PC scope statement is a narrative description of the work that is to be
17 undertaken to which each PC is assigned. The PC scope statements,
18 included as part of the Project Summaries in my Exhibit SBT-E, provide
19 information regarding the purpose of the project, the primary activities to
20 be undertaken under the project, the primary products or deliverables of
21 the project, the billing method that applies to the project, and the

¹² Workpaper WP/SBT-3 includes ESI's management assertion and PwC's report in connection with this attestation examination.

1 justification for that billing method. I have discussed the contents of these
2 Project Summaries in more detail previously in my testimony.

3

4 Q80. PLEASE SUMMARIZE YOUR UNDERSTANDING OF PWC'S
5 CONCLUSIONS RELATING TO AFFILIATE SERVICE CHARGES.

6 A. PwC's independent attestation examination of management's assertion on
7 the presentation of costs allocated by ESI and other Entergy affiliates to
8 ETI concluded that management's assertion was fairly stated in all
9 material respects. Management asserted that ESI has allocated costs
10 accumulated in identified PCs on a cost causative basis using billing
11 methods that ensure accurate recording and billing of the costs associated
12 with the provision of the related services. Management further asserted
13 that billing methods used to allocate costs by ESI ensure that costs
14 charged to ETI reasonably approximate the actual costs of services
15 provided and are no higher than the costs charged to other affiliates for
16 similar services.

17

18 Q81. PLEASE SUMMARIZE YOUR UNDERSTANDING OF PWC'S
19 CONCLUSIONS RELATING TO PC SCOPE STATEMENTS.

20 A. PwC concluded that management's assertion regarding the PC scope
21 statements was fairly stated in all material respects, *i.e.* the PC scope
22 statements adequately described the project purpose, primary activities,
23 products or deliverables, and rationale for billing method assignment.

1 Q82. DOES THE TOTAL ETI ADJUSTED AMOUNT ON THE G-6
2 SCHEDULES INCLUDE THE RECOMMENDATIONS MADE BY PWC AS
3 A RESULT OF ITS ATTESTATION EXAMINATION OF MANAGEMENT'S
4 ASSERTION ON THE PRESENTATION OF COSTS ALLOCATED BY
5 ESI AND OTHER ENTERGY AFFILIATES TO ETI?

6 A. Yes. The Total ETI Adjusted amount on the G-6 schedules reflects all of
7 the pro forma adjustments on Exhibit SBT-D. This exhibit includes various
8 adjustments due to PC billing method changes (Pro Forma
9 Number AJ21-J). The net effect of these adjustments is an increase in
10 costs billed to ETI of \$627 which is included in the Total ETI Adjusted
11 amount in test year affiliate charges.

12

13 B. Summary of ESI Billings to Affiliated Companies

14 Q83. WHAT WERE TOTAL BILLINGS FROM ESI TO THE AFFILIATED
15 COMPANIES DURING THE TEST YEAR?

16 A. ESI billed approximately \$938 million to its affiliate companies during the
17 test year for services provided. The following exhibits to my testimony
18 contain schedules that present views of ESI billings to affiliates:

- 19 • Exhibit SBT-8 – ESI Test Year Per Book Billings to Affiliates by
20 Project
- 21 • Exhibit SBT-17 – Direct vs. Allocated ESI Test Year Per Book
22 Billings to Affiliates

1 Q84. WHAT HAPPENS TO CHARGES THAT ARE BILLED BY ESI TO THE
2 OTHER SERVICE COMPANIES, SUCH AS EOI AND EEI?

3 A. After ESI bills another service company for services rendered, the billed
4 affiliate in turn bills the costs to its affiliates. For instance, when ESI bills
5 EOI for services rendered, EOI will bill one or more of the regulated
6 nuclear plants that it serves (e.g., EGSL's River Bend facility) for the cost.
7 When ESI bills EEI for services rendered, the costs are billed by EEI to
8 one or more of its affiliates. No costs billed by ESI to EOI and EEI are
9 subsequently billed by those Business Units to ETI.

10

11 Q85. WHAT IS THE LEVEL OF CHARGES FROM ESI TO ETI DURING THE
12 TEST YEAR?

13 A. ESI billed ETI approximately \$89 million during the test year, or
14 approximately 9.5% of ESI's total billings to all affiliates during the test
15 year (as seen on Exhibit SBT-8). This figure is a total per book number,
16 which includes expense and capital amounts billed to ETI. After taking
17 into account exclusions and pro forma adjustments for ESI charges billed
18 to ETI, the Total ETI Adjusted number is approximately \$53 million (the
19 remaining \$12 million of the Total Requested amount relates to charges
20 from other Entergy affiliates).

1 Q86. HAVE THERE BEEN ANY CHANGES TO THE ESI BILLING PROCESS
2 SINCE THE COMMISSION'S LAST REVIEW OF THE AFFILIATE
3 BILLING PROCESS IN DOCKET NO. 39896?

4 A. No. There have been no substantive changes to the ESI billing process
5 since the Commission's last review of ETI's rates in Docket No. 39896.
6

7 C. Billing Methods

8 1. Billing Method Overview

9 Q87. IN SECTION VII.A ABOVE YOU DESCRIBED HOW A BILLING METHOD
10 CHOSEN FOR A PROJECT CODE ENSURES THAT ETI IS BILLED
11 ONLY THOSE COSTS ATTRIBUTABLE TO ETI. DO YOU HAVE AN
12 EXHIBIT THAT PROVIDES MORE INFORMATION REGARDING THE
13 BILLING METHOD ASSIGNMENT PROCESS?

14 A. Yes. As described in the billing process discussion in Exhibit SBT-15,
15 after the preparer of a PC request selects a billing method, it is reviewed
16 for reasonableness by both the intermediate approver of the PC and the
17 Affiliate Accounting and Allocations team that I oversee. If the billing
18 method selected does not appear to reflect cost causation, the approver
19 may contact the preparer for clarification as to why the billing method was
20 chosen, or may reject the request until the billing method is adequately
21 justified or another billing method is selected to ensure that the billing
22 method is appropriate for the services provided under the PC.
23 Attachment 4 to Exhibit SBT-15 contains guidelines for preparing PC

1 scope statements, including the selection and justification of a cost
2 causative billing method.

3

4 Q88. PLEASE EXPLAIN HOW ESI DEFINES "DIRECT" VERSUS
5 "ALLOCATED" BILLINGS.

6 A. ESI defines direct billings as those that are billed 100% to one affiliate.
7 Costs included in direct billings are incurred exclusively for the benefit of
8 one affiliate. ESI defines allocated billings as those that are distributed
9 using a formula that allocates costs to two or more affiliates. Costs
10 included in allocated billings are incurred for the benefit of more than one
11 affiliate.

12

13 Q89. DOES ESI BILL DIRECTLY FOR SERVICES PROVIDED TO THE
14 REGULATED AFFILIATES WHENEVER APPROPRIATE?

15 A. Yes. The former SEC regulations required that service costs be billed
16 directly to an affiliate as long as such costs can be reasonably identified
17 as caused by an affiliate. Under PUHCA 2005, the FERC adopted this
18 "carryover" SEC provision.

19 However, it is important to note that the fundamental purpose of a
20 service company such as ESI is to achieve benefits from consolidation
21 and economies of scale for multiple companies. Therefore, the bulk of
22 ESI's costs may necessarily be incurred to provide common services
23 required by multiple companies, which require an allocation of costs. For

1 example, there are several filings that are required by regulatory agencies
2 that include information for numerous affiliates. Because one filing often
3 serves multiple legal entities, the employees working on that document will
4 charge their time using a PC that employs an allocation factor that
5 represents a cost causative relationship to the work performed.

6 Direct billings from ESI to ETI were 25% of ETI's total charges from
7 ESI during the test year. Exhibit SBT-17 depicts the percentage of direct
8 versus allocated billings from ESI to each of the affiliates to which ESI
9 provides service. As evidenced by this exhibit, ETI's direct billings from
10 ESI are in line with the direct billings received by the other operating
11 companies.

12
13 Q90. DOES ESI DIRECTLY BILL EEI FOR SERVICES PROVIDED TO EEI ON
14 BEHALF OF THE NON-REGULATED AFFILIATES WHENEVER
15 APPROPRIATE?

16 A. Yes. As noted above, the Operating Companies have similar operations,
17 which provide opportunities for consolidation of services provided to them
18 by ESI. Although the provision of similar services by a single provider
19 results in economies of scale, this often requires an allocation of costs
20 instead of direct charging. However, because Entergy's non-regulated
21 subsidiaries require many services that are not similar to those of the
22 regulated utility Operating Companies, the non-regulated companies are
23 not likely to share as many "consolidated" services as the regulated

1 companies. Instead, because of the variation in requested services
2 provided to the non-regulated affiliates, direct billings to the non-regulated
3 affiliates occur more often than direct billings to the Entergy Operating
4 Companies. As shown on Exhibit SBT-17, direct billings to EEI (which
5 receives the majority of non-regulated billings and, in turn, bills the
6 appropriate subsidiary) represent 40% of the total billings by ESI to EEI.
7 As noted above, many services provided by ESI to non-regulated affiliates
8 are billed by ESI to EEI, rather than to the individual non-regulated
9 affiliates that receive those services. This does not mean, however, that
10 ESI is "underbilling" the non-regulated affiliates for the services they
11 receive. The billing methods applied to the project codes applicable to
12 these services ensure that the non-regulated affiliates are paying for their
13 applicable share of these costs (if allocated), or the full cost if the project
14 code direct bills the entire cost to EEI. Exhibit SBT-15 Attachment 6c
15 includes the statistics of each non-regulated company that were included
16 in calculating billing methods.

17
18 Q91. DOES ESI EVER USE MORE THAN ONE BILLING METHOD FOR A
19 GIVEN PC?

20 A. No. Because each PC captures a specific service, each PC has only one
21 billing method assigned to it, and the billing method is selected to ensure
22 that every affiliate receiving the service also receives an appropriate
23 allocation. Therefore, the costs related to all services performed under a

1 PC that is not directly billed are allocated among affiliates using the same
2 criterion (such as number of accounts payable transactions or number of
3 customers). The use of a single billing method ensures that all affiliates
4 causing costs to be incurred and receiving the service pay an appropriate
5 proportion of the costs. This also ensures that the affiliates are, in total,
6 charged no more and no less than 100% of the costs for services provided
7 under the PC. Also, the use of a single billing method, which is assigned
8 based on cost causation principles, ensures that each affiliate is paying
9 the same per unit price for the same service, and that the prices charged
10 to ETI are no higher than the prices charged by ESI to the other affiliates
11 for similar services.

12

13 Q92. AFTER THE COSTS OF ESI'S SERVICES ARE CAPTURED BY A PC,
14 HOW ARE COSTS ALLOCATED AMONG THE APPROPRIATE
15 COMPANIES?

16 A. One billing method is assigned to each PC for each service company.
17 Depending on the assigned billing method, the cost of services rendered
18 will be billed directly to a single affiliate or allocated among several
19 affiliates. Billing methods are based on allocation formulae. Under
20 PUHCA 2005, these allocation formulae must be reviewed and accepted
21 by the FERC. Each allocation formula is based on data relevant to the
22 affiliated companies.

1 There are approximately 50 formulae currently in use by ESI that
2 are used to derive billing methods. The FERC has reviewed and accepted
3 each of these formulae. Examples of these allocation formulae are: total
4 average number of customers, number of personal computers, and
5 transmission line miles.

6 One allocation formula may be the basis of several billing methods
7 used in the project billing process. For example, ESI has several billing
8 methods that use the total number of customers allocation formula,
9 including: Billing Method CUSEOPCO, based on average electric
10 customers for the utility Operating Companies; and Billing Method
11 CUSTEGOP, based on average electric and gas customers for the utility
12 Operating Companies. Billing methods that use a common basis for
13 allocation, such as those mentioned above, are referred to collectively as
14 a "billing method family." Attachment 6b to Exhibit SBT-15 provides the
15 billing methods used during the test year. This exhibit includes each
16 billing method, the title of each billing method, and the percentage of total
17 costs allocated to each affiliate for each billing method.

18

19 Q93. PLEASE SUMMARIZE HOW THE BILLING METHODS WORK.

20 A. Services that are provided by ESI to only one Entergy affiliate are billed
21 using direct billing methods, which by definition bill only one affiliate.
22 Services that are provided to more than one affiliate are allocated in
23 accordance with formulae reviewed and accepted by FERC. As

1 previously discussed, billing methods that distribute costs using these
2 formulae are often termed allocation methods. There were 171 direct and
3 allocated billing methods derived from FERC-accepted formulae in order
4 to bill ESI affiliate costs to the Entergy-affiliated companies during the test
5 year. Of these billing methods, approximately 37% are direct billing
6 methods (one billing method for each business unit ESI serves directly),
7 and the remainder represent variations of the allocation formulae, as
8 discussed above. However, as noted on Attachment 7 of SBT-15, only 79
9 of the 171 ESI billing methods were used to bill costs to ETI during the test
10 year as reflected in the Total ETI Adjusted amount.

11
12 2. Billing Method Calculations

13 Q94. WHAT ARE THE ESI BILLING METHODS THAT WERE USED TO BILL
14 COSTS FOR SERVICES TO ETI DURING THE TEST YEAR?

15 A. Exhibit SBT-18 is a chart that includes each ESI billing method that was
16 used to bill costs to ETI during the test year. The chart provides the billing
17 method number, the billing method family to which each method is
18 associated, the basis on which the method is calculated, and the types of
19 costs that are allocated using each method.

1 Q95. DID ESI USE ANY BILLING METHODS TO ALLOCATE COSTS TO ETI
2 DURING THE TEST YEAR OTHER THAN THOSE INCLUDED IN
3 EXHIBIT SBT-18?

4 A. No.

5

6 Q96. PLEASE DESCRIBE HOW EACH ALLOCATION METHOD EMPLOYED
7 BY ESI DURING THE TEST YEAR IS CALCULATED.

8 A. Each allocation method is calculated by taking each business unit's
9 pro-rata share of the cost driver statistics (such as number of accounts
10 payable transactions or number of employees). For each allocation
11 method, Attachment 6b of Exhibit SBT-15 includes the percentages
12 allocated to each affiliate as well as the statistics used to come up with
13 those percentages. For Attachment 6b, all non-regulated percentages
14 and statistics are included in the "EEI" column. Attachment 6c was
15 prepared to provide the individual non-regulated companies included in
16 the statistics for "EEI."

17 As previously required by the SEC under PUHCA 1935 and now
18 recognized by FERC under PUHCA 2005, all ESI services to ETI are
19 billed at cost. The specific billing method chosen for a particular type of
20 charge is selected to provide an appropriate matching of costs with the
21 cost drivers. Every affiliate that causes the cost and receives the service
22 provided is included in the cost allocation.

1 D. Service Company Recipient Allocation (also referred to as Shared
2 Services Loader)

3 Q97. DOES THE ESI AFFILIATE BILLING PROCESS INCLUDE A
4 MECHANISM THAT CAPTURES AND ALLOCATES THE COSTS
5 ASSOCIATED WITH SERVICES THAT ESI PROVIDES TO ITSELF?

6 A. Yes. In addition to being the provider of services to affiliates, ESI also
7 provides services to itself so that it, in turn, can provide services to its
8 affiliates. Therefore, under cost causation billing, ESI is also a receiver of
9 costs associated with the services it provides. The mechanism that
10 allocates the costs associated with the services ESI receives is currently
11 known as the "Service Company Recipient Allocation." This allocation is
12 actually comprised of several types of costs, including information
13 technology, desktops and telephones (discussed more specifically by
14 Company witness Julie F. Brown), facilities-related costs such as rents
15 and space management (discussed more specifically by Company witness
16 Thomas C. Plauché), Human Resources-related costs (discussed more
17 specifically by Company witness Raeder), and the like.

19 Q98. HOW DOES ESI CAPTURE THE COSTS ASSOCIATED WITH ESI
20 SERVICES RECEIVED?

21 A. ESI captures the costs associated with ESI services received by including
22 ESI as one of the legal entities to which ESI costs may be billed.
23 Examples of cost causative allocation methods of which ESI is a recipient

1 are APTRNALL (Accounts Payable Transactions), GENLEDAL (General
2 Ledger Transactions), and PRCHKALL (Payroll Checks Issued). Because
3 ESI creates Accounts Payable ("AP") invoices, has its own General
4 Ledger ("GL") transactions, and has employees who receive payroll
5 checks, a portion of the costs are caused by ESI. Also, like other
6 affiliates, ESI may directly bill costs to itself for services solely caused by
7 ESI using a direct billing method. Examples of costs that may be directly
8 billed to ESI are office supplies, professional fees, and rent associated
9 with ESI employees only.

10

11 Q99. WHERE DOES ESI RECORD THE COSTS ASSOCIATED WITH ESI
12 SERVICES THAT ARE BILLED TO ESI?

13 A. During the PC billing process, all ESI expenses billed to ESI are deferred
14 on the balance sheet using a clearing account (Account 184SSL). In
15 particular, all of the costs received by ESI in the PC billing process are
16 assigned to Account 184SSL and further separated by the following
17 functions: Information Technology, Support – Operations, Support –
18 Corporate, Supply Power – Nuclear, and President/CEO.

19

20 Q100. HOW ARE THE COSTS ACCUMULATED IN ACCOUNT 184SSL
21 ALLOCATED?

22 A. A second-tier allocation called Service Company Recipient Allocation
23 clears the Account 184SSL balance and distributes the costs to the

1 affiliates that are using the services of ESI employees. This is also
2 consistent with cost causation principles. It is appropriate to bill
3 companies a pro-rata share of ESI costs based on the amount and type of
4 ESI services they receive because the demand for ESI services drives the
5 costs associated with ESI.

6
7 Q101. PLEASE DESCRIBE THE SERVICE COMPANY RECIPIENT
8 ALLOCATION PROCESS.

9 A. During the PC billing process, both the "pool" and "basis" for the Service
10 Company Recipient Allocation are created. The pool is the portion of
11 monthly costs associated with services received by ESI, which occurs
12 when ESI bills itself. Such costs within this pool are identified by function.
13 The basis is the total monthly labor billings to each affiliate to which ESI
14 provides services in a given month. Such billings are also identified by
15 function. Thus, a loader rate for each function can be calculated.

16
17 Q102. HOW IS THE LOADER RATE CALCULATED?

18 A. The loader rate for each function is determined by dividing the total
19 amount of costs in the pool for a function for that month by the total
20 amount of labor billings (the basis) to affiliates for each function for the
21 same month. Though typically stable, the monthly loader rates may vary
22 as the functional pool and basis vary. The loader rate then is applied to
23 labor billing results to distribute the costs in the pool. The Affiliate

1 Accounting and Allocations group reviews the pool and basis amounts
2 monthly to ensure that they are reasonable.

3

4 Q103. PLEASE PROVIDE AN EXAMPLE OF THE SERVICE COMPANY
5 RECIPIENT ALLOCATION PROCESS.

6 A. In the following example, the Human Resources ("HR") department
7 provides staffing services to the Fossil organization. The HR employees
8 assign their time to a PC that bills based on the number of fossil-fueled
9 generation plant ("Fossil") employees within each Entergy subsidiary.
10 Because ESI has Fossil employees, ESI receives a portion of the billing,
11 which is assigned to the 184SSL account. This is classified as an
12 overhead cost for ESI Fossil employees. During the same billing process,
13 ESI Fossil employees bill their labor out to those companies receiving their
14 services via the billing method assigned to each PC used.

15 Once the PC billing process described above is complete, the
16 Service Company Recipient Allocation begins. In this second-tier
17 allocation, the total dollar amount that was billed to ESI for services
18 provided to ESI Fossil employees by Human Resources (contained within
19 the Support-Corporate pool) is distributed to the labor amounts that were
20 billed by the ESI Fossil group (the basis), thereby loading the Fossil
21 organization's labor billings with their share of service company recipient
22 charges.

1 Q104. WHY DOES ESI USE THIS TWO-TIERED APPROACH FOR BILLING?

2 A. The two-tiered approach is used to ensure that all the costs (both
3 overhead and direct) are paid for by the affiliates that cause the costs. It
4 is important that ETI be able to determine the total cost associated with its
5 projects and services. The Service Company Recipient Allocation
6 ensures that overheads associated with managing each ESI function are
7 loaded to the projects to which those functional employees charged their
8 time. This enables each project to be fully-loaded with both the direct
9 costs assigned to the project as well as service company recipient
10 charges.

11

12 E. Payroll Loaders

13 Q105. WHAT ARE PAYROLL LOADERS?

14 A. Payroll loaders allocate payroll-related costs, specifically payroll taxes,
15 employee benefits, post-employment benefits, stock options, certain
16 incentive compensation, and paid time off. Each of these costs has its
17 own loader. These payroll-related costs are loaded to projects so that
18 each project is fully-loaded with both the direct labor costs and the
19 associated payroll loaders.

20

21 Q106. PLEASE SUMMARIZE THE PAYROLL LOADERS PROCESS.

22 A. The Human Resources department provides Affiliate Accounting and
23 Allocations with base standard rates for employee benefits,

1 post-employment benefits, and stock options, while the Compensation and
2 Benefits Design department provides the base standard rates for
3 incentives. These base standard rates are based on total payroll. The
4 base standard rate for payroll taxes is calculated by the Affiliate
5 Accounting and Allocations group based on payroll taxes paid during the
6 prior year as a percentage of the total payroll paid during the prior year.
7 Because payroll allocations load only on productive payroll rather than
8 total payroll, the Affiliate Accounting and Allocations group adjusts these
9 base standard rates by productive factors to generate actual loader rates.
10 The actual loader rate for paid time off is also calculated by the Affiliate
11 Accounting and Allocations group based on the percentage of
12 non-productive payroll to productive payroll.

13 The loader rates for employee benefits, post-employment benefits,
14 stock options, incentives, and paid time off are applied to productive
15 straight-time payroll (excluding overtime). The loader rate for payroll taxes
16 is applied to total productive payroll (including overtime). All loaders are
17 assigned the same PC as the labor, so that they properly follow the same
18 billing distribution as the labor dollars on which they are based. As I
19 explained earlier in my testimony, each PC is assigned one billing method
20 that will most appropriately allocate the charges to the companies
21 receiving the services based on cost causation principles.

1 Q107. HOW OFTEN ARE LOADER RATES REVIEWED AND ADJUSTED, IF
2 NEEDED?

3 A. The loader rates for payroll taxes, employee benefits, post-employment
4 benefits, stock options, incentives, and paid time off, are reviewed for
5 reasonableness by the Affiliate Accounting and Allocations group on a
6 quarterly basis and adjusted, or trued-up, as needed.

7

8 VIII. OTHER AFFILIATE BILLINGS

9 Q108. BESIDES ESI, WHICH ENTERGY COMPANIES BILLED ETI FOR
10 SERVICES RENDERED DURING THE TEST YEAR?

11 A. Each of the Operating Companies billed ETI for services rendered. There
12 are several reasons for the Operating Companies to provide services to
13 one another. For instance, materials from the storeroom of one Operating
14 Company are often transferred to another. Also, one Operating Company
15 may assist another in an emergency situation, such as during a storm and
16 subsequent storm restoration. An Entergy affiliate can also charge a
17 percentage of the operating costs of a shared plant to another Entergy
18 affiliate through the co-owner billing process. As noted previously, during
19 the test year, EGSL charged operating costs to ETI related to the
20 jointly-owned Nelson 6 plant. The following exhibits provide a listing of
21 test year per book billings by project/activity code for each Operating
22 Company to its affiliates and for Entergy's non-regulated affiliates to the
23 regulated affiliates:

- 1 • Exhibit SBT-19 – Entergy Arkansas Billings to Affiliates;
- 2 • Exhibit SBT-20 – Entergy Gulf States Louisiana Billings to Affiliates;
- 3 • Exhibit SBT-21 – Entergy Louisiana Billings to Affiliates;
- 4 • Exhibit SBT-22 – Entergy Mississippi Billings to Affiliates;
- 5 • Exhibit SBT-23 – Entergy New Orleans Billings to Affiliates; and
- 6 • Exhibit SBT-24 – Entergy Non-Regulated Affiliates Billings to
- 7 Regulated Affiliates

8

9 IX. SPONSORED CLASSES OF AFFILIATE COSTS

10 A. Overview

11 Q109. WHAT IS THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY?

12 A. I sponsor the following three classes of affiliate costs:

13 1) Depreciation. The Depreciation Class includes the cost for the
14 depreciation and amortization of ESI assets. These assets are
15 used by ESI in the provision of services to its affiliate companies;

16 2) Service Company Recipient Offsets. The Total ETI Adjusted
17 amount for the Service Company Recipient Offsets Class is zero.
18 This class is set-up for Accounting purposes only; and

19 3) Other Expenses. The Other Expenses Class primarily includes
20 certain employee benefits costs, incentive compensation
21 adjustments, the credit ETI received from the 5% upcharge to the
22 non-regulated affiliates, and other miscellaneous costs not
23 associated with other specific classes.

24 As shown on my Exhibits SBT-5 and SBT-6, these three classes
25 are in the Accounting Entries function, which is included in the Corporate
26 Support family.

1 Q110. WITH REGARD TO THE THREE CLASSES THAT YOU SPONSOR, DO
2 THE BILLINGS PROVIDED TO ETI DURING THE TEST YEAR MEET
3 THE COMMISSION STANDARDS FOR INCLUSION OF SUCH COSTS
4 IN RATES?

5 A. Yes. The billings to ETI during the test year in the three classes of costs
6 that I sponsor meet the Commission standards for inclusion of such costs
7 in rates (noting, again, that there are no costs from the Service Company
8 Recipient Offsets Class included in the Total ETI Adjusted amounts in this
9 case). Specifically:

- 10 1. The charges billed to ETI during the test year were reasonable and
11 necessary for the operation of ETI.
- 12 2. The amount charged to ETI through the PC billing process, the
13 co-owner billing process, and the loaned resource billing process
14 for each cost or class of costs during the test year are no higher
15 than the amount charged to the other affiliates or non-affiliated
16 persons for these classes of costs.
- 17 3. The amounts charged to ETI during the test year represent the
18 actual costs of services provided to ETI.
- 19 4. As with all other classes of affiliate costs, expenses that are not
20 allowed for ratemaking purposes are included in the billed
21 expenses, but are excluded from the Total ETI Adjusted amount as
22 below-the-line expenses in accounts such as Account No. 426,
23 and/or are included in the pro forma adjustments shown on
24 Schedule G-6.2, and, therefore, are not included in cost of service.
- 25 5. The items charged to ETI are not duplicative of items already
26 provided by or for ETI.

1 B. Depreciation Class

2 1. Description of Class

3 Q111. PLEASE BRIEFLY DESCRIBE THE DEPRECIATION CLASS OF
4 AFFILIATE COSTS.

5 A. This class represents the cost of depreciation and amortization of ESI
6 assets. These assets are used by ESI for the provision of services to its
7 affiliate companies.

8

9 Q112. WHAT IS THE TOTAL ETI ADJUSTED AMOUNT FOR THIS CLASS OF
10 SERVICES?

11 A. As shown in Exhibits SBT-A, SBT-B, and SBT-C, the Total ETI Adjusted
12 amount for this class of services is \$2,952,022. Of this amount, ESI
13 directly billed 26% of the amount, and allocated 74% of the amount, to
14 ETI. The following table summarizes this information for the Depreciation
15 Class. The table shows for each class the following information:

Total Billings	Dollar amount of total Test Year billings and charges from ESI to all Entergy Business Units, plus the dollar amount of all other affiliate charges to ETI that originated from any Entergy Business Unit. This is the amount from Column (C) of the cost exhibits SBT-A, SBT-B, and SBT-C.
Total ETI Adjusted Amount	ETI's adjusted amount for electric cost of service after pro forma adjustments and exclusions.
% Direct Billed	The percentage of the ETI adjusted test year amount that was billed 100% to ETI.
% Allocated	The percentage of the ETI adjusted test year amount that was allocated to ETI.

Class	Total Billings	Total ETI Adjusted		
		Amount	% Direct	% Allocated
Depreciation	\$44,969,923	\$2,952,022	26%	74%

1 Q113. PLEASE DESCRIBE THE EXHIBITS THAT SUPPORT THE
2 INFORMATION INCLUDED IN THE TABLE ABOVE.

3 A. Please see Exhibits SBT-A, SBT-B, and SBT-C, which I described above
4 in connection with my affiliate overview presentation. For each of these
5 exhibits, the amounts in the columns represent the following information:

Column (A) – Support	Dollar amount of total Test Year billings and charges from ESI to all Entergy Business Units, plus the dollar amount of all other affiliate charges to ETI that originated from any Entergy Business Unit.
Column (B) – Service Company Recipient	Dollar amount that was included in the service company recipient allocation. Service company recipient charges are the cost of services that ESI provides to itself, which in turn are charged to affiliates that receive those services. The service company recipient allocation process is described earlier in my testimony.
Column (C) – Total	Represents the sum of Columns (A) and (B).
Column (D) – All Other BU's	That portion of Column (C) that was billed and charged to Business Units other than ETI.
Column (E) – ETI Per Books	Represents the difference between Columns (C) and (D).
Column (F) – Exclusions	Represents amounts that are excluded from ETI electric cost of service. The exclusions are described in my testimony.
Column (G) – Pro Forma Amount	Pro Forma Amounts include adjustments for known and measurable changes, and corrections.
Column (H) – Total ETI Adjusted	ETI adjusted amount requested for recovery in this case for this class (Column (E) plus Columns (F) and (G)).

- 1 I have explained the adjustments with respect to Column F
- 2 (Exclusions) and Column G (Pro Forma Amount) earlier in my testimony.

1 Q114. ARE THERE ANY PRO FORMA ADJUSTMENTS TO THIS CLASS?

2 A. Yes. The pro forma adjustments for the Depreciation Class are shown on
3 Exhibit SBT-D, which also indicates the Company witnesses who sponsor
4 those pro forma adjustments, and lists the pro forma adjustments by
5 account. As indicated on Exhibit SBT-D, I sponsor one pro forma
6 adjustment to the Depreciation Class. Exhibit SBT-12 describes the pro
7 forma adjustments to the Depreciation Class in greater detail.

8

9 2. Necessity

10 Q115. WHAT KINDS OF ASSETS ARE OWNED BY ENTERGY SERVICES
11 THAT RESULT IN THE DEPRECIATION THAT IS THEN CHARGED TO
12 THE AFFILIATE COMPANIES?

13 A. In order to provide services to its affiliate companies, ESI must invest in
14 certain depreciable assets to support its operations. These assets consist
15 primarily of computer equipment, computer software systems,
16 communications equipment, furniture, fixtures, leasehold improvements,
17 and aircraft. However, a pro forma adjustment was made to remove
18 Company aircraft costs from the Company's cost of service.

19

20 Q116. PLEASE DESCRIBE HOW THE DEPRECIATION OF ESI'S ASSETS IS
21 CALCULATED.

22 A. The purpose of depreciation is to distribute the cost of an asset over its
23 expected useful life. Total depreciation expense over the life of an asset

1 is equal to the asset's cost (less any proceeds realized upon disposal).
2 ESI uses the straight-line method to calculate the annual depreciation
3 expense for its assets. Use of this depreciation method results in the cost
4 of an asset being distributed evenly over the expected useful life of the
5 asset. For example, an asset costing \$1,000 that has an expected service
6 life of 10 years would result in depreciation expense for this asset of \$100
7 per year for a period of 10 years (\$1,000 divided by 10 years = \$100 per
8 year or 10% a year). This method of calculating depreciation is
9 appropriate under generally accepted accounting principles. The
10 straight-line method is also the most commonly used and accepted
11 depreciation method. According to an American Institute of Certified
12 Public Accountants survey of 539 companies in 2011, 91% use the
13 straight-line method of depreciation versus other methods, which are
14 primarily accelerated methods of depreciation.¹³ Exhibit SBT-25 is a
15 summary of ESI's assets, including plant in service, accumulated
16 depreciation, net plant, and the service life used to calculate depreciation.

17

18 Q117. PLEASE EXPLAIN WHY THE DEPRECIATION COSTS BILLED TO ETI
19 ARE NECESSARY.

20 A. ESI requires certain assets to support the operations that provide services
21 to its affiliates, including ETI. The depreciation cost is the result of

¹³ American Institute of Certified Public Accountants (AICPA); Best Practices in Presentation and Disclosure, formerly Accounting Trends & Techniques, – 2012.

1 distributing the cost of these assets over their expected service lives to the
2 recipients of the services provided by ESI. These assets enable ESI to
3 provide the services required by its affiliates, including ETI, in the most
4 efficient, effective, and reliable manner possible. Without such assets to
5 support its operations, ESI could not provide the services that are required
6 by its affiliates, including ETI. Depreciation of those assets is a necessary
7 and proper component of the cost of owning and using the assets to
8 provide services.

9
10 3. Reasonableness

11 Q118. HAVE YOU REVIEWED THE DEPRECIATION EXPENSE TO
12 DETERMINE WHETHER THE CHARGES WERE REASONABLE?

13 A. Yes. The charges to ETI for the costs I sponsor are reasonable for the
14 operation of ETI because the method of calculating depreciation
15 (straight-line method) is appropriate under generally accepted accounting
16 principles and is the most common method used. In addition, the price
17 charged by ESI to ETI for this item represents the actual cost of this item.

18
19 Q119. WHAT OBJECTIVE SOURCES SUPPORT YOUR OPINION THAT THE
20 DEPRECIATION COSTS BILLED BY ENTERGY SERVICES TO ETI ARE
21 REASONABLE?

22 A. Exhibit SBT-26 is a benchmarking study prepared under my supervision
23 that compares the dollar amount of assets per employee for ESI to the

1 dollar amount of assets per employee for other PUHCA 2005 service
2 companies. This measure, cost of assets per employee, is appropriate
3 because employees drive the need for assets in service companies.
4 Because the number of employees would be the primary determinant of
5 the level of the assets that would be required, assets per employee is a
6 valid measure. Exhibit SBT-26 compares the service company property
7 per employee of ESI to the service company property per employee of
8 seven other PUHCA 2005 service companies with at least \$100 million of
9 service company property as of December 31, 2012. This exhibit supports
10 the conclusion that ESI's cost of assets per employee, while somewhat
11 higher than the average, still fall within a reasonable range compared to
12 that of the other PUHCA 2005 service companies. This comparison is
13 based on service company headcount information contained in the
14 respective corporate Forms 10-K and service company property
15 information contained in each service company's FERC Form 60 Annual
16 Report for the period ending December 31, 2012.

17

18 Q120. DID YOU INCLUDE ANY ADJUSTMENT TO THE DATA IN
19 PERFORMING THE BENCHMARKING COMPARISON?

20 A. Yes. An adjustment was necessary to ensure comparability between
21 ESI's depreciation levels and that of the other service companies. In
22 particular, the service company property included in the benchmarking
23 study excludes the "Transportation Equipment" category. Beginning with

1 the FERC Form 60 Annual Report for the period ending December 31,
2 2008, the service company property category "Aircraft and Airport
3 Equipment" was eliminated and included in "Transportation Equipment." A
4 pro forma adjustment was made (AJ21A) to remove Company aircraft
5 costs from the Company's cost of service. Therefore, to be consistent
6 with the costs included in this case, the Transportation Equipment was
7 removed from the total Service Company Property for all companies
8 before the benchmarking study was completed. Because the
9 benchmarking study supports the reasonableness of the level of assets
10 being depreciated, and the procedures used to depreciate the assets are
11 appropriate and consistent with well accepted accounting practices, the
12 ultimate level of depreciation is likewise reasonable.

13 With the exception of depreciation on aircraft, ESI distributes the
14 costs associated with the depreciation and amortization of ESI assets
15 based on the labor cost billed to each affiliate. Distributing ESI's
16 depreciation and amortization costs in this manner is an appropriate
17 allocation of these costs because ESI employee labor is a reasonable
18 measure of the level of services provided by ESI employees to affiliates,
19 and employees and the services they provide drive the need for the assets
20 utilized by ESI in its operations. Depreciation on aircraft is included as a
21 component of total flight costs of ESI aircraft. Flight costs are charged to
22 specific PCs based on the PC(s) associated with the ridership and
23 purpose of a particular flight. However, as noted above, a pro forma

1 adjustment was made to remove Company aircraft costs from the
2 Company's cost of service.

3

4 4. How Costs are Charged

5 Q121. DO THE DEPRECIATION COSTS CHARGED BY ENTERGY SERVICES
6 TO ETI UNDER THIS CLASS REASONABLY APPROXIMATE THE
7 COSTS OF THOSE ITEMS?

8 A. Yes. The depreciation costs charged are based on the actual costs of the
9 assets supporting ESI's operations and do not include any profit or
10 markup.

11

12 Q122. IS THE PRICE CHARGED TO ETI FOR DEPRECIATION NO HIGHER
13 THAN THE PRICE CHARGED TO OTHER AFFILIATES?

14 A. Yes. The price charged to ETI is no higher than the price charged by ESI
15 to the other affiliates for depreciation on a per unit basis. With the
16 exception of depreciation on aircraft, ESI depreciation expense is loaded
17 onto each ESI labor dollar, and then billed out to affiliates. The
18 depreciation loader is assigned the same PC as labor, so that it properly
19 follows the same billing distribution as the labor dollars on which it is
20 based. As explained in my testimony, each PC is assigned one billing
21 method that will most appropriately allocate the charges to the companies
22 receiving the services based on cost causation principles. Thus,
23 depreciation cost is billed to each affiliate at the same rate for each dollar

1 of labor charged, ensuring that costs are equitably distributed to each
2 affiliate.

3

4 Q123. HOW ARE THE COSTS OF THIS CLASS CAPTURED AND BILLED TO
5 ETI?

6 A. With the exception of depreciation on aircraft, the cost associated with this
7 class is initially captured in Project Code F5PCZUDEPX, Depreciation and
8 Amortization, and then these costs are distributed directly to ESI PCs
9 based on the labor charged to the project codes. The receiving PCs then
10 bill the depreciation costs (along with all other costs charged to the PC) to
11 ESI's affiliates based on the assigned billing method for each project.
12 During the test year, projects receiving depreciation costs billed
13 \$2,952,022 Total ETI Adjusted, which includes pro forma adjustments, to
14 ETI. Exhibit SBT-B shows the costs included in this class by project code.

15

16 Q124. WHAT BILLING METHOD IS USED TO ALLOCATE THIS EXPENSE
17 ITEM TO THE VARIOUS ENTITIES THAT RECEIVE SERVICES FROM
18 ENTERGY SERVICES?

19 A. As noted, with the exception of depreciation on aircraft, ESI assigned
20 depreciation costs to projects based on labor charged to projects and then
21 billed these costs to affiliates based on the billing method assigned to
22 each project. The use of assets required to support ESI employee service
23 functions results in the depreciation and amortization cost. Labor charged

1 to projects is an appropriate allocation for this cost because ESI employee
2 labor is a reasonable measure of the level of services provided by ESI
3 employees to affiliates. This process distributes the depreciation and
4 amortization of assets necessary for the ESI employees to provide
5 services to its affiliates in a manner consistent with the distribution of ESI
6 labor to the affiliates that receive services.

7
8 C. Service Company Recipient Offsets (also referred to as Shared Services
9 Loader Offsets)

10 1. Description of Class

11 Q125. PLEASE BRIEFLY DESCRIBE THIS CLASS OF AFFILIATE COSTS.

12 A. This class represents the corresponding credit to Service Company
13 Recipient Allocation transactions. As discussed earlier in my testimony,
14 the Service Company Recipient Allocation is the mechanism by which the
15 costs of services provided by ESI employees to operate ESI that are
16 initially billed to ESI through the PC billing process are distributed to ESI's
17 affiliates in a second-tier allocation. ESI records the costs associated with
18 ESI services received in a "clearing account" on its balance sheet. These
19 costs reside temporarily in this clearing account until they are distributed
20 to affiliates that are using the services of ESI employees. There are two
21 components of the Service Company Recipient Allocation process: the
22 recording of costs in the clearing account during the PC billing process;
23 and removal from or credit to the clearing account during the second-tier

1 allocation process. Because the costs are distributed to all affiliates based
2 on the labor billings of ESI employees, the allocated costs are reflected in
3 the other affiliate classes. The loader offset, which is charged to a
4 balance sheet clearing account, is reflected in the Service Company
5 Recipient Offsets Class. Because the loader offset is charged to a
6 balance sheet account at ESI, loader offset amounts are not included in
7 the Total ETI Adjusted amount, as shown on my Exhibits SBT-A, SBT-B,
8 and SBT-C.

9
10 D. Other Expenses Class

11 1. Description of Class

12 Q126. PLEASE DESCRIBE THIS CLASS OF AFFILIATE COSTS.

13 A. This class reflects \$(1,058,055) of costs resulting from certain accounting
14 adjustments. It primarily includes costs related to certain employee
15 benefits, incentive compensation adjustments, the credit from the 5%
16 upcharge to the non-regulated affiliates, and other miscellaneous costs
17 that are not associated with any other specific affiliate class.

18
19 Q127. PLEASE DESCRIBE THE ADJUSTMENTS THAT RESULTED IN THE
20 PAYROLL-RELATED COSTS INCLUDED IN THIS CLASS.

21 A. Certain payroll-related adjustments, which resulted in the payroll-related
22 costs in this class, are primarily the result of the use of standard estimated
23 rates throughout the year, which differ from actual recorded charges at the

1 end of the year. The costs resulting from the incentive compensation
2 adjustments and employee benefits account for a credit of approximately
3 \$290,000. Company witness Raeder discusses the reasonableness of
4 various types of payroll-related costs, including employee benefits,
5 teamsharing, and other incentive compensation and payroll taxes. I
6 address the residual amount of these payroll-related costs that have not
7 been included in other affiliate classes.

8
9 Q128. BESIDES THESE PAYROLL-RELATED COSTS, WHAT OTHER COSTS
10 ARE INCLUDED IN THE OTHER EXPENSES CLASS?

11 A. Also included in the Other Expenses Class is a credit of approximately
12 \$763,000 related to the 5% upcharge to the non-regulated companies.

13
14 Q129. WHAT PERCENTAGES OF THE TOTAL ETI ADJUSTED FOR THIS
15 CLASS WERE DIRECT BILLED AND ALLOCATED TO ETI?

16 A. As shown on Exhibit SBT-A, SBT-B, and SBT-C, the Total ETI Adjusted
17 amount for this class of services is \$(1,058,055). Of this amount, ESI
18 directly billed the \$763,000 credit described above and allocated the
19 payroll-related costs to ETI. The following table summarizes this
20 information for the Other Expenses Class. I described the column names
21 previously in the Depreciation Class section of my testimony.

		Total ETI Adjusted		
Class	Total Billings	Amount	% Direct	% Allocated
Other Expenses	\$108,399,283	\$(1,058,055)	96%	4%

1 Q130. PLEASE DESCRIBE THE EXHIBITS THAT SUPPORT THE
2 INFORMATION INCLUDED IN THE TABLE ABOVE.

3 A. Exhibits SBT-A through SBT-C support the information for this class in the
4 same manner as I discussed earlier in my testimony. For each exhibit, the
5 amounts in the columns represent the same information as described
6 above with regard to my Depreciation Class.

7

8 Q131. ARE THERE ANY PRO FORMA ADJUSTMENTS TO THIS CLASS?

9 A. Yes. The pro forma adjustments for the Other Expenses Class are shown
10 on Exhibit SBT-D, which also indicates the Company witnesses who
11 sponsor those pro forma adjustments. As indicated on Exhibit SBT-D,
12 there were eighteen pro forma adjustments made to the Other Expenses
13 Class. Exhibit SBT-12 describes the pro forma adjustments to this Class
14 in greater detail.

15

16 Q132. WHAT ARE THE MAJOR COST COMPONENTS OF THE CHARGES
17 FOR THIS CLASS?

18 A. The major cost components for charges from ESI to ETI are as follows:

<u>Cost Component</u>	<u>Dollars</u>	<u>% of Total</u>
Payroll and Employee Costs	\$(316,331)	30%
Outside Services	\$14,409	-1%
Office and Employee Expenses	\$(3,493)	0%
Other	\$(752,639)	71%
TOTAL	\$(1,058,055)	100%

1 Q133. WHAT IS THE IMPORTANCE OF THESE COST CATEGORIES?

2 A. The foregoing table is common to most affiliate witnesses in this case. I
3 directly sponsor the costs shown in this table because they comprise the
4 Total ETI Adjusted amount for the Other Expenses Class. This breakout
5 of costs provides an additional view of the components of the costs in this
6 class. For example, the table demonstrates that 30% of the costs are for
7 compensation, employee benefits, and other labor-related expenses
8 ("Payroll and Employee Costs"). These costs are the result of certain
9 adjustments, which I discussed earlier in this section. Company witness
10 Raeder discusses overall payroll and benefits-related structure and
11 practices.

2. Necessity

Q134. PLEASE EXPLAIN WHY THE ADJUSTMENTS THAT RESULTED IN THE COSTS BILLED TO ETI UNDER THE OTHER EXPENSES CLASS ARE NECESSARY.

A. As explained above, the adjustments resulting in the payroll-related costs included in the Other Expenses Class are necessary to reflect costs associated with reasonable and necessary compensation and benefit programs that Company witness Raeder discusses in her direct testimony. The remaining costs in this class were necessary to properly reflect accounting entries in the Company's books in accordance with generally accepted accounting standards.

3. Reasonableness

Q135. HAVE YOU REVIEWED THE COSTS IN THE OTHER EXPENSES CLASS TO DETERMINE WHETHER THE ADJUSTMENTS WERE REASONABLE?

A. Yes. The adjustments that result in the payroll-related costs in the Other Expenses Class are reasonable because they were made in accordance with generally accepted accounting standards to reflect timing differences associated with book entries. There is no duplication or over-recovery of actual costs. The reasonableness of the compensation and benefit programs associated with these payroll-related costs are discussed by Company witness Raeder. As stated, the remaining adjustments are

1 reasonable (and necessary) to reflect proper and accepted accounting
2 practices with regard to the Company's books.

4. How Costs are Charged

5 Q136. DO THE COSTS CHARGED BY ESI TO ETI UNDER THE OTHER
6 EXPENSES CLASS REASONABLY APPROXIMATE THE COSTS OF
7 THOSE ITEMS?

8 A. Yes, they do. The costs charged under the Other Expenses Class, which
9 are the result of certain adjustments, are based on actual costs and do not
10 include any profit or markup.

11

15 A. Yes. The adjustments that resulted in the costs in this class ensure that
16 the total costs charged to ETI are no higher than the price charged by ESI
17 to the other affiliates for the costs charged under the Other Expenses
18 Class. The adjustments that resulted in the payroll-related costs in this
19 class are part of a true-up process to adjust payroll-related account
20 balances for the use of standard estimated rates during the year. The
21 account balance true-ups follow the same billing distribution as the original
22 payroll loaders with the same PCs used for labor costs. As I explained
23 earlier in my testimony, each PC is assigned one billing method that will

1 most appropriately allocate the charges to the companies receiving the
2 services based on cost causation principles. This basis of cost allocation
3 ensures that the price charged to ETI is no higher than the price charged
4 to other Entergy affiliates.

5

6 X. SPONSORED AFFILIATE PRO FORMA ADJUSTMENTS

7 Q138. DO YOU SPONSOR ANY OF THE PRO FORMA ADJUSTMENTS TO
8 THE TEST YEAR INCLUDED IN EXHIBIT SBT-12?

9 A. Yes. Exhibit SBT-12 identifies the pro forma adjustments that I sponsor.

10

11 Q139. PLEASE DISCUSS THE PRO FORMA ADJUSTMENTS TO THE TEST
12 YEAR COSTS THAT YOU SPONSOR.

13 A. The adjustments to the test year affiliate costs that I sponsor are listed
14 below.

- 15 • AJ21G – Correct Capital Project Codes
- 16 • AJ21J – PwC Changes in Billing Methods

17 These test year pro forma adjustments are described in greater
18 detail in Exhibit SBT-12 and Exhibit SBT-D, which includes details of the
19 pro forma adjustments by account.

1 Q140. ARE THERE ANY ADDITIONAL AFFILIATE PRO FORMA
2 ADJUSTMENTS TO THE TEST YEAR THAT ARE SPONSORED BY
3 SOMEONE OTHER THAN YOU?

4 A. Yes. Please refer to Exhibit SBT-12 for a listing and description of the
5 affiliate pro forma adjustments to the test year sponsored by other
6 Company witnesses.

7

8 XI. BENCHMARKING OF ESI COSTS

9 Q141. ARE ESI'S COSTS OF PROVIDING ITS SUPPORT SERVICES
10 COMPARABLE TO OTHER SERVICE COMPANIES?

11 A. ESI's costs are generally in line with those of peer service companies.

12

13 Q142. HAVE YOU DONE ANY TYPE OF ANALYSIS TO REACH THE
14 CONCLUSION THAT ESI'S COSTS ARE GENERALLY IN LINE WITH
15 THOSE OF PEER SERVICE COMPANIES?

16 A. Yes, I conducted a benchmarking analysis comparing ESI's costs with the
17 costs of peer service companies using publicly available information in the
18 December 31, 2012 FERC Form 60 for a peer group of service companies
19 and the December 31, 2012 Form 10-K for the related holding companies.

1 Q143. PLEASE DESCRIBE HOW YOU DEVELOPED YOUR LIST OF PEER
2 GROUP SERVICE COMPANIES.

3 A. I identified the list of service companies that submitted a December 31,
4 2012 Form 60 to the FERC. The FERC Form 60 is required to be filed by
5 all utility service companies serving multiple jurisdictions. For 2012, 34
6 service companies, including ESI, submitted the FERC Form 60. Several
7 of these companies have multiple service companies that provide specific
8 services that are not comparable to ESI, including those that provide
9 nuclear generation operations. My analysis excluded those service
10 companies that provide specific services that are not comparable to ESI.
11 In order to ensure comparability, my analysis also excluded service
12 companies with a non-U.S. based parent company and companies with
13 fewer than 1 million customers. I also excluded those companies whose
14 service company headcount information is not publicly available in the
15 Form 10-K or whose FERC Form 60 does not include service company
16 property in excess of \$100,000,000. Lastly, I excluded Exelon because its
17 service company O&M expense, a significant metric in the benchmarking
18 analysis, does not include an entire year of results for the Constellation
19 shared service entity following Exelon's March 2012 merger with
20 Constellation. The resulting 2012 ESI peer group used in my
21 benchmarking analysis includes AEP, Ameren, FirstEnergy, PEPCO, PPL,
22 and Southern Company. A high level overview of the peer group selection
23 process is included in Exhibit SBT-27A.

1 Q144. PLEASE DESCRIBE THE FERC FORM 60 DATA AND THE FORM 10-K
2 DATA THAT WAS USED IN YOUR BENCHMARKING ANALYSIS.

3 A. My benchmarking analysis captured service company O&M expense as a
4 percentage of total company O&M, service company O&M expense as a
5 percentage of total company revenue, service company O&M expense as
6 a percentage of total company assets, and service company O&M
7 expense per service company employee. The service company O&M
8 expense is publicly available in the FERC Form 60. The total company
9 O&M, total company revenue, total company assets, and service company
10 headcount are publicly available in the Form 10-K. Cost comparisons
11 were calculated on a per unit basis rather than a total cost basis due to
12 differing levels of granularity and aggregation in the total costs.

13

14 Q145. WHAT WERE THE RESULTS OF YOUR BENCHMARKING ANALYSIS
15 FOR EACH OF THE COST COMPARISONS LISTED ABOVE?

16 A. As shown in Exhibit SBT-27B, ESI O&M expense represents 21.20% of
17 total company O&M expense, which is comparable to the peer group
18 average of 20.89%. As shown in Exhibit SBT-27C, ESI O&M expense
19 represents 8.70% of total company revenue, which is comparable to the
20 peer group average of 8.30%. As shown in Exhibit SBT-27D, ESI O&M
21 expense represents 1.61% of total company assets, which is only slightly
22 above the peer group average of 1.45%. Lastly, as shown in
23 Exhibit SBT-27E, ESI O&M expense is \$229,231 per ESI employee, which

1 is marginally higher than the peer group average of \$206,750 per service
2 company employee.

3

4 Q146. HOW SHOULD COMPARATIVE PERFORMANCE RELATIVE TO A
5 PEER GROUP, AS CALCULATED THROUGH BENCHMARKING, BE
6 VIEWED?

7 A. In general, service company costs that align with a peer group average
8 provide an indication that a company is providing services in a cost
9 effective manner.

10

11 Q147. WHAT DO YOU CONCLUDE FROM THE BENCHMARKING ANALYSIS
12 THAT YOU PERFORMED?

13 A. As a result of my benchmarking analysis, I have concluded that ESI's
14 costs are generally in line with those of peer service companies, which
15 supports the conclusion that ESI costs charged to ETI are reasonable.

16

17 XII. CONCLUSION

18 Q148. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

19 A. Yes, at this time.
