ENTERGY TEXAS INC.
Demand, Consumption, and Customer Data by Strata
For The Twelve Months Ending March 31, 2013

Method of Determining Strata Contributions to Schedule Q-5.2
Peak Demands from Sample Load Research Data

The Residential and Small General Service class loads shown on Schedule Q-5.2 pages 1 through 24 were developed by a stratified separate ratio analysis program that utilized load research sample interval data, sample and total class billing kWh and sample strata weighting factors. It produced average demands by strata for all hours in each month and analyzed and determined the respective monthly rate class peak demands by strata. The times of the monthly system peak demands were also input into the analysis program and it developed monthly system peak demands by strata as well.

The General Service and Large General Service class loads shown on Schedule Q-5.2 pages 25 through 48 were developed as described above for the Residential and Small General Service classes for all strata except for their respective "Billing" strata. The "Billing" strata were analyzed by a 100% Sample Analysis program, which produced "Billing" strata contributions to monthly rate class and system peak demands.
