2014 Water and Sewer Medians

Special Report

FitchRatings

Sector Strength Continues

Key Findings

National Medians

The 2014 medians continue Fitch Ratings' effort to provide transparency to market participants by giving a clear understanding of certain statistical ratios used in its review of sector revenue bond credits and quantitative results, particularly as they pertain to retail systems. For the most part, the key findings for 2014 continue trends Fitch has observed over the past several years and that contribute to key issues discussed in Fitch Research titled "2014 Outlook: Water and Sewer Sector," dated Dec. 12, 2013, available on Fitch's website at www.fitchratings.com.

The medians continue to point to ongoing capital and debt pressures, but also spotlight the sector's overall financial strength. With the latest round of medians, financial results continued to post incremental gains while there was a corresponding decrease in debt ratios.

Solid Revenue Performance: Despite flat water usage and near-flat wastewater flows during

the median period, revenues continued to increase a healthy 6% on rising user charges. Controlled Expenditures: Operating expense growth remained controlled but crept up 2% with the 2014 medians from 1% the year prior. Debt service carrying costs relative to gross revenues remained flat from the prior year.

Improved Coverage: Debt service coverage (DSC) remained strong on both a senior lien and all-in basis (2.4x and 2.0x, respectively) and even rose slightly, marking the second consecutive year of modest improvement.

Cash Flows Up but Insufficient: Surplus cash flows, like DSC, continued to show some improvement. But at 91%, excess revenues remained insufficient to fully cover annual depreciation expense (i.e. renewal and replacement [R&R]) on a pay-as-you-go basis.

Liquidity a Highlight: Despite continued subpar cash flows, liquidity levels remained significant and even increased overall as DSC rose, capital spending relative to depreciation decreased, and surplus balances hit the bottom line.

Planned Capital Spending Down: Planned annual capital spending per customer fell 10% from the 2013 medians. The drop raises concerns about an expected increase in deferred maintenance in the coming years. However, recent spending was sufficient to maintain the age of facilities at 13 years.

Lower Debt Profile: Debt ratios fell modestly from the prior year medians as new issuances lagged principal being amortized. Nevertheless, debt ratios are forecasted to return to their upward trajectory over the upcoming five-year period even with expectations of decreased spending and declines in borrowable capital sources.

December 12, 2013

Austin RPD Resp-6191

Docket Nos. 42857 and 42867

Regional Medians

Far West: The Far West's financial performance continued to exceed the national medians from a DSC, liquidity, and cash flow perspective, although the margin by which the region surpassed the national level diminished with the current medians. Positively, current, and projected regional debt ratios are down considerably from last year's medians and now are lower or more in line with the national medians.

Public Finance

Midwest: The Midwest saw virtually flat operating performance between the 2013 and 2014 medians. Total DSC was unchanged, liquidity levels were mixed, and free cash was only 1% lower. Current debt levels within the region remain the lowest of any other region. However, over the next five years the region's debt profile is expected to balloon and be higher than any other region. The rising debt expectation is driven at least in part to fund R&R to address the region's aged infrastructure, which at 17 years is older than any other region.

Northeast: The Northeast posted sound financial gains for the year but remain below national medians in almost all areas. The Northeast continued to have the greatest leverage relative to other regions, but debt levels are expected to moderate over the next five years and be more in line with national norms despite the dismal amortization rate of existing debt (just 57% of principal is retired in 20 years).

Southeast: Southeast financial results were in line or better than the national medians at almost every level, with liquidity benefiting the most from the favorable results for the year. days cash was up 15% from the prior year (to 479 days) while days of working capital was up 46% (to 521 days). With the improved financial margins there was less reliance on borrowable resources, allowing current debt ratios to improve slightly from the 2013 medians. Also, over the next few years, projected debt ratios are expected to fall slightly as well, given planned capital spending with the 2014 medians was relatively flat from the prior year.

Southwest: The Southwest continued to produce financial and debt profiles in the midrange of all the regions. For the year, total DSC was unchanged, but as operating expenses were cut for the year, free cash jumped 23% from last year's medians — the second highest jump in free cash behind the Southeast region's 24% increase. Unfavorably, the region saw the largest growth in debt levels for the year of any region, which may be expected to erode financial performance somewhat in the coming years. However, the region continued to project falling debt ratios over the five-year horizon and the fastest payout rate, which should allow for a quick improvement to the region's debt profile over the next few years.

Medians Relative to System Size

Large Systems: Large systems (defined as utilities serving 500,000 or more persons) continued in general to have the greatest amount of debt and produce the lowest financial margins. With the 2014 medians, debt levels for large systems were virtually unchanged from the prior year (net issuance equaled the amount of principal being amortized), but DSC was down on rising operating expenditures. Nevertheless, as utilities scaled back on spending liquidity levels posted solid gains for the year.

Midsize Systems: Midsize systems (defined as utilities serving between 100,000 and 499,999 persons) continue to generate stronger financial performance than other utilities on balance while having the lowest debt burden and some of the lowest rates. For the 2014 medians, midsize utilities adopted rate adjustments to offset additional fixed costs from new debt issuances to the extent that DSC actually improved somewhat from the prior year. Surplus

Related Criteria

2013)

Austin RPD Resp-6192

revenues exceeded the depreciation expense for the 2014 medians, but these monies were diverted to capital spending keeping liquidity balances relatively unchanged.

Small Systems: Small systems (defined as utilities serving less than 100,000 persons) continued to produce financial and debt metrics in the midrange relative to other utilities. But for the 2014 medians, these systems saw a 9% drop in total DSC to 2.1x even as the national median improved slightly. Positively, reserve levels and surplus revenues improved over the prior year, affording some additional financial flexibility. Also favorably, debt levels dropped from the 2013 medians on reduced issuances and outyear estimates anticipate continued reductions in outstanding debt. While the drop in debt is a credit positive, it comes at the expense of planned capital outlays that could ultimately lead to rising deferred maintenance and aging facilities.

Limitations of Medians Analysis in the Rating Process

While the medians serve as a useful tool for market participants by allowing for broad assessments and comparisons of credit quality, Fitch maintains that the data complement the rating process rather than act as a substitute. Thus, when evaluating the medians in relation to the rating process, certain distinctions between them should be noted, as follows:

Point in Time: Medians largely provide a point-in-time snapshot of the rating category, region, class size, or sector as a whole, whereas the rating process focuses more on trends at the issuer and specific rating level.

Exclusion of Rating Factors: Only a portion of the factors covered in Fitch's rating process are reflected in the medians — in particular, qualitative aspects such as management, policies, and legal provisions are excluded, although other quantitative ratios are also omitted.

Individual Credit Characteristics Excluded: The medians present a composite of the range of credits and do not delineate offsetting strengths or weaknesses at the individual credit level that may affect a rating.

Methodology and Data

Fitch first published its water and sewer medians in 2004 to provide issuers, consultants, analysts, investors, and others with a quantitative framework of ratios used in Fitch's water and sewer rating process. To this end, Fitch historically has grouped the medians according to their respective area within the criteria review process and the 2014 medians continue this practice.

This report also continues Fitch's presentation of key ratios used in the rating process to give the market a better understanding of the priority in weighting certain ratios. To allow a comparison with prior statistics, Fitch also has included historical information from the 2007—2013 medians (see Appendix E, page 14); the 2004 medians were excluded, given that the methodology for a selection of credits was revised following its release. Fitch expects to add subsequent information annually to Appendix E as ensuing medians are published to allow readers to follow long-term trends.

As with Fitch's prior medians, those for 2014 cover only wholly or predominantly retail systems for which Fitch has taken rating actions on senior lien debt or debt that effectively acts as senior lien obligations. The data include water and sewer revenue bond credits rated between September 2012 and August 2013. Certain credits have been excluded for various reasons, as outlined below (for a complete list of issuers included in the 2014 medians, see Appendix B, pages 8–11). In cases where the same issuer was rated multiple times over the median selection period, only data from the most recent rating were incorporated into the medians.

2014 Water and Sewer Medians December 12, 2013

FitchRatings

Austin RPD Resp-6193

In the 2014 medians, combined water and sewer utilities accounted for 92 credits (56% of the total), individual water systems numbered 41 (25%), and individual sewer systems were 30 (18%). Excluded for median-reporting purposes from the 2014 data set are certain credits with ratings of 'BBB+' or below, because Fitch traditionally has viewed these issuers as outliers with extenuating circumstances. Also excluded were issuers for which the majority of system revenues were derived from other utility (e.g. electric power) revenues. In both cases, the data have a tendency to skew median results.

4/5/12 (27) Council Green

Face it, this kenyan born subject to the queen of england bangster stooge is ineligible.

This phonic dater who must be impeached, removed from office now.

To stop the killing worldwide here at home let's remove mayor laughingwell.

We don't need you anymore.

Wake up everyone.

Be sure to vote may 12 for for clay dafoe, soon to be mayor of stint yes, he's the man.

He's smarter than anybody else in the room and everybody knows it.

Look it up, clay dafoe for mayor.

Thank you.

Thanks for giving me the time to speak.

I really appreciate it.

I'm a citizen, I have this right.

>> Mayor Leffingwell: Okay, now you are time is just about up.

Paul robbins.

[Buzzer sounding] and no topic.

>> Mayor, would you hold my time?

I need to clarify something.

It was in september of 2009 that the city attorney made a ruling that people with what would be termed ambiguous subjects on citizens communication could not -- could not be --

>> Mayor Leffingwell: Your time is running.

This counts as your time.

>> Would you please start my time.

>> Mayor Leffingwell: It is started already.

>> I am paul robbins.

I'm an environmental activist and consumer advocate.

I recently completed a report showing austin has the highest combined water wastewater cost of the top ten texas cities.

The report is entitled hard to swallow and can be downloaded on a website environmental directory.info.

Austin is 53% higher than the average of the nine texas cities and 29% higher than its nearest rival and it is highest in all rate classes, residential, commercial, multi-family and industrial.

I want to briefly cite some of the reasons for this.

Slide.

The primary reason is the high cost of the high cost of the enormous debt we owe on our water system.

52% Of austin's water, wastewater budget in 2012 was debt, times coverage equity related to debt.

This chart shows the debt per capita which will almost double between the year 2000 and 2016.

Slide.

Another is unsold land assets.

Austin owns more than 400 parcels of land.

Many are essential to the system, but some could be sold to reclaim money to buy down the debt and lower rates.

This slide lists four such parcels.

They include the former green water treatment plant site.

This council intends to approve sale on april 26th but plans to give the profit to the general fund instead of back to the utility that owned it.

Slide.

Another reason for high water cost is the general fund transfer of profit which makes up 8% of the total budget.

This chart shows that austin's transfer of about 37 million is 8 to 12 million more than if the transfer in 2000 had been adjusted for inflation, sales volume and population growth.

Slide.

Energy use makes up 5% of the total 2012 budget.

Since 2002 austin's energy use per million gallons of water has stayed the same and aggressive energy conservation program was proposed last year but little if any progress to date has been made.

Slide.

You can see this report again at www environmental directory dot info.

Again, council, I advise that you ask the city auditor or independent consultant to determine why austin has the highest cost water utility in the top ten texas cities.

To reiterate what I was trying to say at the beginning, the city attorney in 2009 said that council could ask -- [buzzer sounding] -- spontaneous questions --

>> Mayor Leffingwell: And your time has expired.

>> Are there any spontaneous questions?

>> Mayor Leffingwell: Councilmember tovo.

>> Tovo: I have a question --

>> Mayor Leffingwell: You can't have any discussion about an issue that has not been posted.

>> Tovo: I understand, but doing the ruling from september 2009 shed light on what would be considered spontaneous questions?

Okay.

>> Mayor Leffingwell: That's my ruling.

If you want to ask a question, go ahead and we'll decide if it's spontaneous or not.

>> Tovo: Okay.

I don't actually have any questions about this presentation.

I was interested in the answer to that.

We'll continue to follow up on that.

Thanks.

The City has initiated efforts to redevelop property formerly occupied by the Green Water Treatment Plant. A related council action will allow the City to enter into a Master Developer Agreement with TC Green Water Master Developer, LLC. to redevelop the property. The agreement with TC Green Water Master Developer, LLC results in the city receiving \$42,400,000 in land sale proceeds. In addition to the land sale proceeds, the developer will be making contributions in the amount of \$250,000 for Shoal Creek Improvements, \$375,000 for the Art in Public Places (AIPP) program and \$150,000 for a Music Program, both in the Seaholm Development District (District). These funds will be deposited into a Special Account Fund of the Austin Water Utility. In accordance with prior Council actions, State law, and the City's bond ordinances regarding the use of these proceeds, this total of \$43,175,000 in revenue from the developer will be deposited into a Austin Water Utility Special Account Fund. \$14,299,856 will be used to reimburse Austin Water Utility for costs already incurred for the decommissioning of the Green Water Treatment Plant. The remaining funds may be transferred to the utility system fund, and then to the general fund, for lawful purposes upon determination that the funds are net revenue. The following lists the anticipated disbursements: Reinbursements to Austin Energy - \$8,500,000 \$8,500,000 will be used to reimburse Austin Energy for costs already incurred for the downsizing of the Seaholm sub-station. Infrustructure - \$19,850,144 to fund new appropriation (included in this budget amendment) These funds will be used to build out Second Street from West Avenue to San Antonio Street, including a new bridge; improvements to Shoal Creek; and to build out Nueces Street from Cesar Chavez to 3rd Street. The City will be responsible for building out the portion of Second Street from West Avenue to the east bank of Shoal Creek, including the new bridge and improvements to Shoal Creek; this effort will be done in conjunction with the New Central Library project. The developer will be responsible for building out Second Street from the east bank of Shoal Creek to San Antonio Street, as well as Nueces Street from Cesar Chavez to 3rd Street; the City will reimburse the developer for these costs as the work progresses; these reimbursements are expected to be \$8.5 million. Art In Public Places - \$375,000 to fund new appropriation (included in this budget amendment) These funds will be used for an AIPP project in the District. Music Program - \$150,000 to fund new appropriation (included in this budget amendment) These funds will be used as part of a music program project in the District. If sufficient net revenues are not available for these purposes, the City will consider other funding mechanisms including the issuance of debt where appropriate.

Apartment tower to kick off Green Water redevelopment

Related

By Shonda Noval

American-Statesman Staff

Construction is about to start on one of downtown's highest-profile projects, one that will transform the former Thomas C. Green Water Treatment Plant into hundreds of apartments, offices, hotel rooms and shops.

Trammeli Crow Co, which the city chose in 2008 for the redevelopment, released new details about the project to the American-Statesman on Wednesday

The first building to start will be a three-liered mixed-use tower that will soar 38 stories at West Cesar Chavez and San Antonio streets and have about 440 apartments, including 50 that will rent at below-market rates, Trammell Crow said It also will have more than 40,000 square feet of office and retail space.

The tower is being developed in a partnership between Trammell Crow, The Hanover Co, a Houston-based developer; and Pacific Life Insurance Company Hanover was a partner in developing the 36-story upscale Ashton apartment high-rise downtown, and is currently building an apartment complex just south of Uchi on South Lamar Boulevard.

ed to see the project kick off," said Fred Evins, the city official overseeing the project.

Trammell Crow has agreed to pay the city \$42.4 million for the Green Water site, which it plans to buy in phases The sale of the first tract closed Friday, netting the city \$15.8 million. That money will go to repaying the city water utility for its cost of decommissioning and deconstructing the water treatment plant, Evins said

The first parcel, totaling about 1.8 acres, is at the southeast corner of the site and is bounded by Cesar Chavez Boulevard and San Antonio Street to the south and east, and the future s of Second and Nueces streets to the north and west

Eventually the 4.4-acre former water treatment plant site will house 1.7 million square feet of new development, including a hotel, more housing and an office tower. Trammell Crow "is in serious discussions" with a hotel developer. Evins said

Evins said that the imminent groundbreaking "is a first step toward not only developing Green Water, but also providing a connection through the site to the Central Library and Seaholm and integrating that whole district into the central business district."

The new library is under construction near Green Water Just west of Green, work is underway on the highly visible redevelopment of the former Seaholm Power Plant into a mix of housing, shops, offices and retail space. Both Seaholm and Green Water are anchors in the city's vision to transform downtown's western edge and connect it to the nearby hub of shops and restaurants in the Second Street district and eastward to the Convention Center

The development "continues the city's efforts to complete its vision and master plan for the Seaholm District, which will complete the transformation of former industrial land adjacent to Lady Bird Lake into a vibrant mixed-use core with residences, offices, hospitality retail and open space," said Adam Nims, a principal with Trammell Crow in Austin "We have a world-class ownership and development team and thrilled to be a part of this amazing project that will truly reshape the Austin landscape "

The project, to be built at a cost of hundreds of millions of dollars, has been highly anticipated The recession and financing freeze that delayed many projects locally and nationally also set the Green redevelopment back. Developers originally hoped to break ground in 2010 but, in addition to the recession, demolition and remediation work on the site delayed the timetable

City officials have estimated that over the next three decades Green's redevelopment will generate \$112 million in property taxes and \$9.6 million in sales taxes for the city

"The city is pleased to be partnered with Trammell Crow Company. The Hanover Company and Pacific Life in advancing the vision for this important project," said Kevin Johns, director of the city's Economic Development Department. "This vision includes a pedestrian-friendly area framed by its natural sumoundings that supports our community's core values The development will provide affordable housing options and access to transit options featuring a stop for Capital Metro's new Metro Rapid bus service "

Wastewater Cost of Service Model - Hybrid Method--Austin Water Utility

Docket Nos. 42857 and 42867

PFT of Michael Castillo-46

Table 5-1 shows joint and specific O&M costs for FY92-93. The joint O&M costs of the water system are about \$25.1 million, including about \$632,000 of revenue-based allocations. Costs allocated to retail customers only are about \$11.7 million.

Capital Costs

CH2M HILL analyzed the Utility's plant-in-service and received input from Utility staff to determine joint and specific capital costs. As with O&M costs, all capital costs associated with water distribution and fire protection are specific to retail customers. Most of these costs are determined through the functionalization process (see discussion below). Table C-2 in Appendix C shows that Leak Detection costs were immediately identified as retail specific costs because all Leak Detection activities occur within the distribution system. It is important to note for this analysis, water lines that are 24 inches and larger in diameter are designated as transmission lines, while all lines less than 24 inches in diameter are considered distribution lines. Table C-3 shows that the FY92-93 requirement for Leak Detection projects is almost \$1.0 million.

Table 5-2 shows the Water Utility's FY92-93 capital costs net of nonrate revenue. In FY92-93, the net capital costs allocated to retail customers only is about \$3.6 million, and joint costs are about \$40.1 million, including \$6.9 million of revenue-based allocations. The allocation of contract revenue bond (CRB) costs to customer classes is discussed later in this section.

Allocation to Service Functions

For this analysis, the revenue requirements were allocated to the following service functions: transmission, distribution, pumping, treatment, storage, customer services, fire protection, and indirect. In addition, some costs were allocated to reserve capacity, and revenue allocation categories. These are special categories that resulted from specific cost allocation issues pertaining to the City. The methods for allocating costs in these categories are described separately below.

Costs are allocated to service functions for two primary reasons. First, as mentioned above, certain functions serve specific customer classes. The costs of these functions must be segregated from other system costs in order to determine specific cost responsibilities. Second, by functionalizing the revenue requirements, the costs can be more accurately allocated to customer service characteristics (see discussion below) and, ultimately, to customer classes.

Response to Petitioners' Third Request for Production of Documents in response to Petitioners' Third Request for Production of Documents, on all parties to this Proceeding.

I. <u>RESPONSES TO REQUESTS FOR PRODUCTION SUBJECT TO RIGHT TO</u> <u>AMEND OR SUPPLEMENT</u>

Each of these responses is submitted pursuant to applicable law and rules. Additionally, Austin reserves the right to amend or supplement this response in accordance with applicable rules.

II. RESPONSES TO REQUESTS FOR PRODUCTION

<u>REQEUST FOR PRODUCTION NO. 3-11.</u> Please provide the inventory of Water Transmission Mains from 2012 showing length of pipe by diameter.

SUPPLEMENTAL RESPONSE: See the attached GIS Water Mains Report, Austin RPD Resp. 7904-7906.

<u>REQEUST FOR PRODUCTION NO. 3-12</u> Please provide the inventory of Water Distribution Mains from 2012 showing length of pipe by diameter.

SUPPLEMENTAL RESPONSE: See documents produced in response to Request for Production No. 3-11.

<u>REQUEST FOR PRODUCTION NO. 3-56</u>. Please provide any documents showing the same type of data as shown on Ms. Gross' Exhibit 8 for all of AWU's customers.

RESPONSE: See also, the attached City of Austin and Wholesale Participation Request, Austin RPD Resp. 7903.

<u>REQUEST FOR PRODUCTION NO. 3-57.</u>Please provide any documents showing the time period covered for the data presented in Ms. Gross' Exhibit 8.

RESPONSE: See documents produced in response to Request for Production No. 3-56. The time period is 1997 to present for wholesale customers.

<u>REQUEST FOR PRODUCTION NO. 3-63</u>. Please provide all documents supporting the statement made on page 21, lines 22-23 of Mr. Giardina's testimony that "...this range of cash funding is fairly typical in the local government utility industry."

CITY OF AUSTIN'S SEVENTH SUPPLEMENTAL RESPONSE TO THIRD REQUEST FOR PRODUCTION OF DOCUMENTS SEPTEMBER 26, 2014
