Re: Blumenthal Substation
PUC Docket 43599

Dear Sir;

As an intervener per the above docket, it is my statement that the current prescribed route would provide the least amount of economic loss, environmental depreciation and reduction for all citizens of Texas to enjoy a beautiful drive down a Hill Country road without the ugly power poles standing out above all other things. The loss to tourist traveling along Ranch Road 1376 would have a negative effect on the small businesses and reroute traffic to other roads. As I leave my property every day and viewing the poles, would be a constant reminder of the reduction in property value I will experience. The current route is the best overall route for the project.

Sincerely;

Albert Dwarshus
