Re: Notice of Violation for the Focused Investigation for:
The Town of Lindsay Wastewater Treatment Plant (WWTP), Lindsay (Cooke County), Texas
TCEQ ID No.: WQ0010923-001; EPA ID No.: TX0025097

Dear Mayor Zwinggi,

On March 10, 2008, Ms. Michelle Havelka and Ms. Suzanna Perea of the Texas Commission on Environmental Quality (TCEQ) DFW Region Office conducted an investigation of the above-referenced facility to evaluate compliance with applicable requirements for wastewater treatment facilities. Enclosed is a copy of the Summary of Investigation Findings. In addition, certain outstanding alleged violations were identified for which compliance documentation is required. Please submit to this office by **May 29, 2008**, a written description of corrective action taken and/or a compliance plan and schedule for the outstanding alleged violations.

In the listing of alleged violations, we have cited applicable requirements, including TCEQ rules. If you would like to obtain a copy of the applicable TCEQ rules, you may contact any of the sources listed in the enclosed brochure entitled "Obtaining TCEQ Rules."

The TCEQ appreciates your assistance in this matter. Please note that the Legislature has granted TCEQ enforcement powers which we may exercise to ensure compliance with environmental regulatory requirements.

We anticipate that you will resolve the alleged violations as required in order to protect the State's environment. If you have additional information that we are unaware of, you have the opportunity to contest the violation(s) documented in this notice. Should you choose to do so, you must notify the DFW Region Office within 10 days from the date of this letter. At that time, Mr. Sid Slocum, Water Section Manager will schedule a violation review meeting to be conducted within 21 days from the date of this letter.

REPLY TO: REGION 4-DALLAS/FORT WORTH • 2309 CRAVEL DR. • FORT WORTH, TEXAS 76118-6951 • 817-588-5800 • FAX 817-588-5700

April 29, 2008

However, please be advised that if you decide to participate in the violation review process, the TCEQ may still require you to adhere to the compliance schedule included in the attached summary report until an official decision is made regarding the status of any or all of the contested violations.

If you or members of your staff have any questions, please feel free to contact Ms. Michello Havelka at the DFW Region Office at (817) 588-5800 or directly at (817) 588-5837.

Sincerely,

 Sid Slocum,
Water Section Manager
Dallas/Fort Worth Region Office

Summary of Investigation Findings

TOWN OF LINDSAY WWTP

Investigation # 646388

, COOKE COUNTY,

Investigation Date: 03/10/2008

Additional ID(s): TX0025097
WQ0010923001

OUTSTANDING ALLEGED VIOLATIONS

Track No: 315882 Compliance Due Date: 05/29/2008

2D TWC Chapter 26.121(a)

30 TAC Chapter 305.125(4)

30 TAC Chapter 305.125(5)

Alleged Violation:

Investigation: 646388

Comment Date: 04/28/2008

Failure to prevent an unauthorized discharge at the wastewater treatment plant.

During the investigation, it was noted that an unauthorized discharge occurred at the bar screen and areas around the oxidation pond.

Recommended Corrective Action: Submit compliance documentation for the alleged violation to the TCEQ DFW Regional Office by the compliance due date, including a letter stating what actions the entity has completed to correct the problem as well as what actions the entity plans to initiate to prevent this incident from occurring in the future.

Fort Worth, Texas 76118-6951

Re: Investigation #646388

According to your letter dated April 29, 2008, the alleged violation reported after the March 10, 2008 visit, was "failure to prevent an unauthorized discharge at the wastewater treatment plant". During the visit, the investigator told the plant operator that the discharge problem pertained to the racetrack not the oxidation pond.

The problem occurred because of a heavy rainfall the weekend prior to the visit. The heavy rainwater runoff turned the grease in the lift station and lines loose. When the plant was checked the next day the bar screen was covered with grease so the staff cleaned the screen. The grease turning loose put a heavy flow on the racetrack and may have caused some overflow. The bar screen is checked and cleaned daily to prevent a grease buildup that could cause problems. As no evidence of overflow has been noted by the staff since we instigated these procedures, we feel that this has remedied the situation so that no problem will occur in the future.

If there are any questions, please contact city hall.

Sincerely,

Steven K. Zwinggi
Mayor

Estimates of the Total Populations of Counties and Places in Texas
for July 1, 2006 and January 1, 2007

produced by:

Population Estimates and Projections Program
Texas State Data Center
Office of the State Demographer
Institute for Demographic and Socioeconomic Research
The University of Texas at San Antonio

September 2007

APP0501

The attached are estimates of the total population for counties and places in Texas for July 1, 2006 and January 1, 2007 completed by personnel from the Texas State Data Center offices in the Institute for Demographic and Socioeconomic Research at The University of Texas at San Antonio. In this brief report, the methodology used to prepare the estimates is described. Because of space limitations, only a summary of the methodology is presented. Those wishing to obtain a more complete description of the estimation procedures and of the historical and sensitivity analyses used to select the methods employed in these estimates should contact program personnel in the Texas State Data Center at The University of Texas at San Antonio.

Estimation Methodology

Methodology for County Estimates

The estimates reported for counties are the averages of estimates made using ratio-correlation, component-method II, and housing-unit methods. Ratio-correlation procedures utilize multiple regression techniques with the ratio of variable values for adjacent time periods rather than simply the variable values themselves being used as independent and dependent variables. After an extensive evaluation of the relative accuracy of alternative procedures (including difference-rate, ratio-correlation and rate-correlation methods) and an analysis of alternative variables, a simple ratio-correlation model was employed to complete the final estimates. This model used the variables of births, deaths, elementary school enrollment, vehicle registration, and voter registration.

The component-method II procedure employed utilizes data on births, deaths and elementary school enrollment to estimate population. In this method, migration of the school-age population is assumed to be indicative of migration in the total population (with adjustments being made for the historical differences between the school-age migration rate and the total population's rate of migration). Data on public school enrollment from the Texas Education Agency and data from the Texas State Data Center's survey of private schools in Texas are used to estimate change in the school-age population. Data on institutional populations were obtained from applicable institutions, while data on other special populations, such as the elderly population were obtained from the U.S. Bureau of the Census.

The housing-unit method used is of the standard form with change in the number of housing units in the housing stock of an area, from the base date (in this case, the 2000 Census) to the estimate date (in this case, July 1, 2006), being used to estimate population change. New housing additions and demolitions are taken from the U.S. Bureau of the Census survey of building permits and demolitions and the Texas State Data Center survey of counties and cities issuing permits for residential buildings and demolitions. Both the U.S. Census Bureau's building permit survey and the Texas State Data Center's survey can only collect data from permit issuing county and city jurisdictions (methods for dealing with non-permit issuing places are discussed later). Assumptions about vacancy rates and average household size are then used in conjunction with data on the number of housing units in an estimate area (including those in the area at the base date and the net number of units added to, or subtracted from, the base housing stock for the time period between the base date and the estimate date). Separate estimates are completed by type of structure with the types used being single-family structures, 2-to-4 unit structures, structures with 5 or more units, and mobile homes. For purposes of the 2006 estimates, 2000 vacancy rates and average household sizes for each of the housing structure types were assumed to prevail as of the estimate date of July 1, 2006. For 2006, the estimates of the number of new mobile homes added to an area's housing stock were obtained from the Texas

State Data Center's survey of building permits and demolitions. The sum of mobile homes from the survey was subtracted from the U.S. Bureau of the Census' estimate of the total number of mobile homes shipped to Texas. The difference was allocated to jurisdictions on the basis of the change in units in jurisdictions for other housing types from 2000 to the estimate date of July 1, 2006.

The average of the component-method II, ratio-correlation and housing-unit population estimates is used as the population estimate for July 1, 2006 with the total for all counties being controlled to the July 1, 2006 estimate for the State obtained from the U.S. Bureau of the Census. Prior to the release of these estimates, county estimates were evaluated for consistency and reasonableness by comparing them to those from other State and local agencies.

The January 1, 2007 estimates are obtained by adding births to, and subtracting deaths from July 1, 2006 through December 31, 2006, to the July 1, 2006 estimates and assuming that July 1, 2005 to July 1, 2006 rates of migration continue from July 1, 2006 to January 1, 2007. The State and county estimates are obtained using the same method with the sum of the county estimates controlled to the State estimate.

Methodology for Place Estimates

For places, population estimates were made using the same three methods as used for county estimates. To complete the component-method II estimates for places for 2006, standard component procedures were applied to 2000 Census population counts for places. County-level birth and death data for 2000-06 from the Texas Department of State Health Services and 2000-06 data from the Texas Education Agency on public school enrollment and from the Texas State Data Center survey of private schools on enrollment in private schools were used in this procedure. In addition, data on Medicare enrollment is acquired from the Centers of Medicare and Medicaid Services and data on the net movement of persons from the military to the civilian population were obtained for counties from the U.S. Bureau of the Census. Values for each of these items were allocated from counties to places prior to the completion of the place estimates. Such allocation procedures were necessary because data items that were available for places (such as birth and death data) showed year-to-year fluctuations and reporting errors that made the direct use of place-level data problematic. The general allocation procedures used for these items involved population subgroups closely associated with the item being allocated (i.e., women of child-bearing age for fertility, school-age population for school enrollment, the total population for deaths, persons 65+ years of age for Medicare enrollment, and the population 14-17 years of age for net movement). The number in the appropriate subgroups for each place and the remainder of the county in each county in 2000 were survived (using state-level survival rates for 1999-2001) to July 1, 2006, and the sum of the survived groups in each place and the remainder of the county were controlled to the county total for the item as reported from the appropriate agency to obtain the value for each place. Place estimates were completed for July 1, 2006 and adjusted to account for population changes due to annexations or other boundary changes as obtained from the annual Texas State Data Center Boundary and Annexation Survey.

The housing unit estimates for places were completed using the same general procedures delineated above (for counties) except that it was necessary to use procedures to allocate new housing units and demolitions to places that were not reporting jurisdictions. This was done by taking the difference between the county totals for new building permits and demolitions and the

sum of values for places for which data were reported for a county and proportionally allocating the difference to the nonreporting places. For the 2006 estimates, the allocation was done on the basis of the nonreporting places' proportions of county housing stocks as reported in the 2000 Census.

The third method used is the ratio-correlation method. Ratio correlation estimates were made to allocate county populations to places (and non-place areas) using births, deaths and housing units for places as estimation items.

The estimates for place populations from the three methods were averaged to provide a July 1, 2006 estimate of the total population for each place. The sum of the estimated populations for places in each county (and for that part of each county's population not living in places) were controlled to county totals to ensure consistency with the county estimates.

The January 1, 2007 place estimates are prepared using the same extrapolative procedures as described above for the State and county. Place estimates for each county for January 1, 2007 are controlled to the county estimate for January 1, 2007.

Comparisons to U.S. Census Bureau Estimates

The estimates presented here differ from those from sources such as those periodically produced by the U.S. Census Bureau for several reasons. These estimates have been made using techniques that are different than those used by the Bureau. The Census Bureau uses only the distributive housing unit method to estimate place populations and the administrative records method to estimate county populations. Because the administrative records method uses income tax data that are not available to analysts outside the Census Bureau, this technique can not be used by other agencies. In addition, the estimates reported in the following pages utilize more recent data than those used by the U.S. Bureau of the Census. The Census Bureau's county estimates utilize 2005 birth and death data, whereas 2006 values were employed in the Texas State Data Center estimates reported here. Also, the Census Bureau utilizes birth and death data only in their county level estimates while the Texas State Data Center includes current births and deaths in both county and place level estimates. Finally, the Census Bureau estimates do not include information on annexation and boundary changes for places later than 2004 whereas information through 2006 was included in the estimates completed by the Texas program. Because of these differences, the population estimates presented here and those from the U.S. Bureau of the Census are not directly comparable.
