Statement of Position.

PUC Doc 45624

473-16-2751

per order #2

I am a land owner and have filed an intervention request. My only communication is by postal service and telephone. I do not have access to electronic means and at the present not able to afford an attorney.

To the best of my understanding, Garland proposes to construct a double circuit 345-KV transmission line across Rusk and Panola County crossing our land. I understand that this is a wind powered endeavor that will be of no benefit to Rusk and Panola County. These two counties are rich sources of natural gas and oil energy, therefore, why would we want to risk the effects of this 345-KV transmission line on our environment?

My reason for intervention is that the electro effects of such a high voltage would be a major threat to our home environment. In my case, I have a very serious pulmonary disease and my husband has a pacemaker implant to regulate his heart beats. The risks of the electro effects would be life threatening.

We have two homes on our land. We live on what is left of a larger land grant to my husband's ancestors. I have documentation dating as far back as 1887 and I am researching it as far back as 1845. The family has continuously occupied this land which we now own and this makes it of greater historical value to us. My husband's great grand fathers fought in the civil war.

I am not opposed to progress but I do have a strong position that the ones who reap the benefits of a project should be the ones who pay for it and take the personal risks and responsibility upon themselves without imposing any burden upon others. My home is near segment 10.

For all of the above reasons, I respectfully submit this Statement of Position.
