To whom it may concern,

I live in Vista Oaks a neighborhood directed impacted by the current preferred route for the Round Rock-Leander 148-KV Transmission Line in Williamson County. I oppose the current preferred route for the following reasons:

The proposed electric transmission line route proposed by LCRA does not take into consideration the proximity of many neighborhoods, schools and parks. I am concerned of the effects - on humans and animals, of long-term exposure to EMF emitted by these transmission power lines. Additionally, building a substation within a close proximity to elementary and middle schools is unacceptable. The value of human health should outweigh an alternative longer route.
