FEDERAL BUREAU OF INVESTIGATION

TECG INSPECTION

February 1, 2018

THREE Representatives from TECG came to 206 Oak St. (office of "Waterco") for the purpose of checking Waterco operations.

NUBIA ESTRADA/TECG ENVIRONMENTAL INVESTIGATOR appeared to be leading this visit based on the complaint by Timmy Bean (ref LOCKETT 97411) dated July 17, 2017) This group of three took notes, pictures and discussed Waterco Operation for two and one half hours. "Waterco" was discussed, tariff's, cost, etc

The Transmittal from TECG dated 9/27/12 (copy attached) was also discussed and "Waterco" was made aware that Jennelle Crane was currently an employee of TECG. I have not been given the results of this meet.

UTGCD Inspection

February 1, 2018

UTGCD (FIELD TECHNICIAN) JACOB DOLE came to 206 OAK ST. (office of "Waterco") for the purpose of Verify EXEMPT/NON-EXEMPT status, check well water flo-TEST on Well #1517 & Well #1518 (Results Attached) Please read --- I did, as the owner of "Waterco"

In compliance with UTGCD request the transfer of "Waterco" was returned to Springtown.

I must assume the two agencies above have something to do with PUC.

Thank you,
James Nelson
"Waterco"

Mr. Nelson,

February 6, 2018

On Thursday Feb 1, in order to verify exempt/non-exempt status, staff from the Upper Trinity Groundwater Conservation District flow tested the two wells that were discussed in our conversation a few weeks ago (Nocona Lake Estates). The wells in question are ID 1517 (Well #2) and ID 1518 (Well #1). The results from the flow test were as follows:

- ID 1517 – tested at 6.2 gallons per minute
- ID 1518 – tested at 10 gallons per minute

District Rule 2.1 states:

Rule 2.1 Wells Exempt from Fee Payment, Metering, and Reporting Requirements of These Temporary Rules.

- (a) *The requirements of these Temporary Rules relating to the payment of fees under Section 7, the requirement to install and maintain a meter under Section 8, and the requirement to report to the District the amount of water produced from a well under Section 3 do not apply to the following types of wells:*
- 1. All wells, existing or new, of any size or capacity used solely for domestic use, livestock use, poultry use, or agricultural use;*
 - 2. An existing well or new well that does not have the capacity, as equipped, to produce more than 25 gallons per minute and is used in whole or in part for commercial, industrial, municipal, manufacturing, or public water supply use, use for oil or gas or other hydrocarbon exploration or production, or any other purpose of use other than solely for domestic, livestock, poultry, or agricultural use, except as provided by Subsection (b) of this rule; or*
 - 3. Leachate wells and monitoring wells.*

Because the two wells in question are not equipped to produce 25 gallons per minute, according to our current rules, these two wells (1517 and 1518) are not subject to reporting and the payment of water use fees. Please understand that exemption from reporting and the payment of fees with the Upper Trinity does not in any way exempt these wells from requirements of any other local, state or federal agency.

Furthermore, it has come to our attention that ownership of well 1517 (well #2) has been transferred to an acquaintance of yours (Arthur), we have included a transfer form for both of you to complete and sign so that our records are up to date.

Thank you for your time and help with this matter and please do not hesitate to call with any questions.

Jacob Dove
Field Technician
Upper Trinity GCD

9-27-2012

Today I investigated 2 wells that were reported to be used for Public Water System wells. The Owner of these wells is James Nelson. These wells are Reg ID 1517 and 1518. The GPS locations of these wells are as follows;

Reg ID 1517

"Waterco"

33° 50.785'N

97° 40.155'W

Reg ID 1518

"Waterco"

33° 50.893'N

97° 40.101'W

There is a septic tank that is 63 feet from the well head of well #1.

These two wells are used to service people in the neighborhood. TCEQ visited the location on July 16, 2012 and determined that these wells are not Public Water Systems. They do not have enough customers. The wells are not tied together. One system has 11 customers and the other has 9 customers.

A copy of the TCEQ letter was submitted to the UTGCD.
