If multiple-use facility, describe here:

INFORMATION ON UTILITY SERVICE

Tenants are billed for: ☐ Water ☐ Wastewater ☒ Both These bills are: ☐ Submetered ☒ Allocated

Name of utility providing water/wastewater: **City of White Oak**

Date submetered or allocated billing begins (or began): **01/02**

METHOD USED TO OFFSET CHARGES FOR COMMON AREAS (CHECK ONE):

☐ This provision does not apply to this property. (Each unit is submetered, and we bill the tenant accordingly.)

☐ All common areas are metered or submetered. We deduct the actual charges for water and wastewater to these areas. The we allocate the remainder of the utility bill among our tenants.

☐ This property has an installed irrigation system that is not separately metered or submetered. We deduct 25 percent of the retail public utility's total charges for water and wastewater and then allocate the remaining charges among our tenants.

☐ This property has an installed irrigation system that is separately metered or submetered. We deduct 5 percent of the retail public utility's total charges for water and wastewater and then allocate the remaining charges among our tenants.

☒ This property does not have an installed irrigation system. We deduct 5 percent of the retail public utility's total charges for water and wastewater and then allocate the remaining charges among our tenants.

*IF UTILITY SERVICES ARE ALLOCATED, COMPLETE THE FOLLOWING ALSO.

METHOD USED TO ALLOCATE UTILITY CHARGES (CHECK ALL THAT APPLY):

☒ Occupancy and size of rental unit: (Owner or manager: If you check this option, you must also check one of the next three boxes to indicate the occupancy method used.) At least 50 percent of the utility bill for water/wastewater consumption is allocated using the occupancy method checked below. The remainder is allocated according to either:
• the size of the tenant's dwelling unit divided by the total size of all dwelling units, or
• the size of the space rented for the tenant's manufactured home divided by the total of size of all manufactured home spaces.

☐ Occupancy method: The number of occupants in the tenant's dwelling unit is divided by the total number of occupants in all dwelling units at the beginning of the utility's billing period.

<input type="checkbox"/> Ratio occupancy method: The number of occupants in the tenant's dwelling unit is adjusted as shown in the table at right. This adjusted value is divided by the total of these values for all dwelling units at the beginning of the retail public utility's billing period. (The idea behind this method is that increased occupancy does not result in an equal increase in usage.)	Number of Occupants	Number of Occupants for Billing Purposes
	1	1.0
	2	1.6
	3	2.2
	>3	2.2 + 0.4 for each additional occupant

<input checked="" type="checkbox"/> Estimated occupancy method: The estimated occupancy in the tenant's dwelling unit is divided by the total estimated occupancy of all dwelling units. The estimated occupancy for each unit is based on the number of bedrooms and is determined from the table at right.	Number of Bedrooms	Number of Occupants for Billing Purposes
	0 (Efficiency)	1
	1	1.6
	2	2.8
	3	4.0
	>3	4.0 + 1.2 for each additional bedroom

☐ Submetered hot water: The individually submetered hot water used in the tenant's dwelling unit is divided by all submetered hot water used in all dwelling units.

☐ Submetered cold water is used to allocate charges for hot water provided through a central system: The individually submetered cold water used in the tenant's dwelling unit is divided by all submetered cold water used in all dwelling units.
