RECEIVED

PM 4:00

Hi Isaac,

I spoke with the PUC Mapping Staff, and they provided the attached PDF and following message:

I'm sorry but the shapefiles are the digital data that is viewable and usable only with specially licensed GIS software. Essentially they are how GIS professionals communicate and transfer the boundary information that is contained on the paper maps. In this particular case, they show the portion of the tract the petitioner was asking be considered for release from Aqua Texas Inc (CCN No. 13201).

What I've attached in the email here is what someone would see if they look over my shoulder at my desk, which is a screenshot of the shapefile (from Item 9) loaded on our software, overlaying the PUC's existing water CCN layer, using a basemap of aerial imagery.

Please let me know if you have any questions.

Hi Gary,

Can you assist with Isaac's question? I do not know how to use/view shapefiles.

Please let me know. Thanks!

Hi Brady,

<mark>What do I use to review the shapefiles? Is that something I can do from my desk or are there licensing restrictions on software which would require me to go look at it in the office?</mark> Thanks.

Sorry, Isaac.

I spoke too soon. The Native Files in Item 9 include shapefiles.

Hi Isaac,

It appears that the filing party only submitted the PDF that you have access to in the Native Files. We did not receive larger copies of the maps, or individual PDFs (or shapefiles).

To whom it may concern:

I'm looking at the native files for item number one in 51738 and it includes two maps. Were large, paper versions submitted to us for our records? If so, is there any way I can get high resolution versions uploaded or would I need to come into the office to look at it? Thanks for your help.
