

## Filing Receipt

**Received - 2021-12-20 02:21:51 PM**

**Control Number - 51812**

**ItemNumber - 239**

December 20, 2021

I was without power for 37 hours during the 2020 Texas Polar Vortex. When and if there is a need to establish rolling blackouts or other alternatives, there should be a prior shutdown before cutting power to residences. Develop a shutdown of all residential street lights. Leave all high-speed traffic street lights on. People who need to drive can still navigate with vehicle headlights.

In my Pine Trace Village subdivision east of Tomball, the street lights have a separate smart meter whose \$\$ charges are paid for by the HOA. So, there should be a way to create a list of all residential street light smart meters and shut them down before shutting down residential homes.
