

gap left by removing PVGS Unit 3.” a course that is not supported by EPE and that could have negative consequences for customers. EPE urges the Commission to “reject the problematic approach advocated in the RD, and either approve a fair and reasonable proxy price for PVGS Unit 3 or allow EPE to recover its costs from other Commission-approved resources through the unopposed Alternative Cost of Service.”

17. EPE also takes issue with the RD’s characterization of EPE’s position on this issue. EPE states that “the RD incorrectly argues that EPE is voluntarily deciding to cease using PVGS. No party disputed these benefits, but the RD disregards them without discussion. proposed one of two alternatives: (1) continue to supply energy and capacity from PVGS Unit 3 pursuant to a fair and reasonable proxy price, or (2) use existing and previously approved resources (supplemented, as necessary, with market purchases) to make up the shortfall left by denying PVGS Unit 3.

18. EPE states that its “proposed and preferred alternative is for approval of a fair and reasonable price for PVGS Unit 3 capacity and energy.” EPE further states that PVGS Unit 3 has been used as a system resource for both Texas and New Mexico customers for both planning and operations purposes. EPE states that “the Commission has repeatedly approved of Loads and Resources tables including PVGS Unit 3 for a period spanning over 15 years.” EPE contends that no party disputed the benefits of this resource, which include a high degree of reliability and very low and stable fuel costs. EPE further contends that as a carbon-free resource, PVGS Unit 3 will enable long-term compliance with New Mexico’s carbon-free electricity goals. EPE claims that the RD disregards these benefits without discussion.

19. EPE argues that it proposed a reasonable proxy price that would have covered costs whereas, EPE claims, “no party disputes that the current proxy price typically requires EPE to operate at a loss.” EPE objects to the RD’s conclusion that the proposed proxy price should be

rejected because EPE was not entitled to cost recovery for PVGS Unit 3. EPE argues that “[t]his conclusion is contrary to basic rate making principles, and the RD offers no supporting authority for that conclusion.”

20. EPE contends that, if the Commission decides that EPE should no longer use PVGS Unit 3 and denies adopting a fair proxy price, then the Commission must accept the “Alternative Cost of Service.” EPE argues that “it is black letter law that the Commission must set rates that allow EPE to recover its cost of service.” EPE cites the testimony of James Schacht, explained that the Alternative Cost of Service presented by EPE “accurately reflects how EPE will serve New Mexico load if continued use of PVGS Unit 3 is not approved.” EPE also cites the testimony of Mr. Novela, who testified that “[i]f PVGS-3 is not going to be used to provide service to New Mexico customers, then the allocation in EPE’s primary cost of service is just wrong because it assumes the existence of PVGS-3 providing service to New Mexico customers.”

21. EPE argues that the RD based its denial of the Alternative Cost of Service is the “unsupported premise that ‘EPE will rely on market purchases for any shortfall.’” EPE further argues that, “by declining to recommend a proxy price *and* denying EPE cost recovery for using existing sources to serve New Mexico, the RD, if adopted, would leave EPE no option but to rely on market purchases.” EPE contends that there are two problems with this recommendation.

22. The first “problem” to which EPE points is the language of the RD suggesting that if “EPE elects to stop using energy and capacity from PVNGS Unit 3 to serve New Mexico customers, it must consider alternatives and demonstrate that the proposed replacement resources is the most effective choice.” EPE argues that it is not abandoning a resource or electing to stop using PVGS Unit 3. Rather, EPE argues, “it is requesting rates to recover its cost of service from existing and authorized resources.”

23. The second problem, EPE argues, is that “market prices can be volatile and market purchases are not always available.” Therefore, EPE does not consider this approach to be advisable. Obviously, if the Commission adopts the RD and thereby orders EPE to engage in market purchases, EPE will do so. However, EPE warns, “the Commission should be fully cognizant of the risks and cost associated with EPE’s reliance on those market purchases, which could be significant.”

24. CLC, in its response to this exception, responds “[f]rom a regulatory policy standpoint, the Recommended Decision wisely calls EPE’s bluff and refuses to make a deal with the Company for continued ‘voluntary’ use of PVNGS Unit 3 on EPE’s terms.” CLC argues that EPE mischaracterizes both the RD and the Recommended Decision correctly finds that EPE’s proposed new PVNGS Unit 3 proxy price should be denied because it represents full cost recovery as if that unit were allowed in rate base, contrary to past Commission orders decertifying that plant and excluding it from rate base. *See* Recommended Decision at 24, 136-37; *see also id.* at 129-37. However, in light of the terms of the NMPRC Case No. 2722 stipulation and Final Order that accomplished decertification, the Recommended Decision errs in “tak[ing] EPE at its word” that it will cease using PVNGS Unit 3 to serve New Mexico customers going forward. *See id.* at 24, 137. A more comprehensive survey of the regulatory treatment of PVNGS Unit 3 in New Mexico reveals that, unless and until the Commission explicitly overrules or modifies the Final Order that approved the Case No. 2722 stipulation, EPE will continue to have the option to “voluntarily” use PVNGS Unit 3 to serve New Mexico customers, so the pricing for Unit 3 going forward should be considered in this case. testimony of EPE’s own witness, Stephen T. Buraczyk, on this subject. CLC states that “[n]owhere does the Recommended Decision indicate that market purchases will be the only source of energy or capacity to replace PVNGS Unit 3 at times other than the

Company's projected annual peak hour." CLC notes that the RD repeatedly refers to the "power" provided by PVGS Unit 3, not the "energy," making it clear that the RD is referring to the unit's contribution to capacity needed at peak periods.

25. In its response to this exception, CLC counters that EPE repeatedly took the position that it would cease using PVGS Unit 3 to serve New Mexico customers unless its proposed proxy price was approved, and only now takes the position that it will continue to use Unit 3 if the Commission approves a reasonable proxy price.

26. CLC states that it "does not take issue with the concept of a reasonable proxy price," but concurs in the RD's rejection of the proxy price proposed by EPE. CLC has filed its own exception to the RD on this issue. In EPE's Exception No. 2, CLC argues that the Commission should depart from the RD and "approve a market-based proxy price, in light of the long series of orders that give EPE discretion to use PVNGS Unit 3 to serve New Mexico customers."

27. CLC argues that the price proposed by EPE "reflects rate base treatment for PVNGS Units 1 and 2 and essentially would provide rate base recovery for a generating unit that the Company twice has stipulated will never be included in rate base." CLC further argues that the Commission has reaffirmed the second stipulation "in numerous EPE rate proceedings since then, including Case Nos. 3606, 03-00302-UT, 06-00258-UT, and 09-00171-UT, and no party—including EPE—has asked the Commission to alter its precedents in this case."

28. In its own exception on this subject, CLC states that "[t]he Recommended Decision correctly finds that EPE's proposed new PVNGS Unit 3 proxy price should be denied because it represents full cost recovery as if that unit were allowed in rate base, contrary to past Commission orders decertifying that plant and excluding it from rate base." However, CLC goes on to argue that "in light of the terms of the NMPRC Case No. 2722 stipulation and Final Order that

accomplished decertification, the Recommended Decision errs in ‘tak[ing] EPE at its word’ that it will cease using PVNGS Unit 3 to serve New Mexico customers going forward.” CLC contends that “[a] more comprehensive survey of the regulatory treatment of PVNGS Unit 3 in New Mexico reveals that, unless and until the Commission explicitly overrules or modifies the Final Order that approved the Case No. 2722 stipulation, EPE will continue to have the option to ‘voluntarily’ use PVNGS Unit 3 to serve New Mexico customers, so the pricing for Unit 3 going forward should be considered in this case.”

29. CLC notes that the RD concludes that it is unnecessary to approve a new proxy price because “EPE has made clear that it will cease using PVNGS Unit 3 to serve New Mexico customers if its proposed proxy price is rejected.” However, CLC goes on to say that, “notwithstanding any representations that EPE has made in this case about its intention to no longer ‘voluntarily’ use PVNGS Unit 3 to serve New Mexico customers, the Case No. 2722 Final Order and stipulation give the Company ongoing ‘discretion’ to use PVNGS Unit 3 to provide capacity or energy needed to serve EPE’s New Mexico customers.”

30. After reviewing the relevant cases, CLC concludes that “the Recommended Decision simply is wrong in concluding that the proxy price approved in Case No. 09-00171-UT is ‘the existing approved proxy price’ because the ‘Commission has never disapproved nor changed the proxy price approved in Case No. 09-00171-UT.’” CLC goes on to argue that because “EPE has continued to ‘voluntarily’ use PVNGS Unit 3 to provide energy and capacity to New Mexico customers after its most recent commitment in Case No. 09-00171-UT expired by its terms indicates that the Commission should view with more skepticism than the Hearing Examiner EPE’s representations that it will cease to do so if the proxy price it is proposing in this case is rejected.”

31. CLC urges the Commission to modify or qualify the RD “to express the Commission’s understanding that while EPE in fact has continued to use the Credit Suisse proxy price, its right to recover such amounts has not been determined by the Commission and is not being determined in this case.”

32. EPE, in its response to CLC’s exception, argues that the City “asks the Commission to ignore its prior decisions and overrule the well supported finding of the Hearing Examiner that the Commission had authorized a proxy price for [PVGS Unit 3].” Moreover, EPE states that it finds CLC’s concern that EPE will continue to use PVGS Unit 3 to serve New Mexico customers even if the Commission adopts the RD baffling. EPE states that, if the Commission rejects the proposed proxy price, then EPE understands that the Commission is directing it to utilize other resources to serve New Mexico customers.

33. The Commission rejects both EPE’s exception and CLC’s exception. The Commission agrees with the Hearing Examiner that EPE’s proposal to use a proxy price that reflects the average cost of PVGS Units 1 and 2 must be rejected. The Commission concurs with the finding of the RD that adoption of the proposal would compensate EPE for PVGS Unit 3 power as if PVGS Unit 3 is in rate base, which is at odds with the Commission’s exclusion of PVGS Unit 3 from EPE’s rate base.

34. The arrangement for PVGS Unit 3 was a negotiated result and a reasonable compromise at the time. That EPE now seeks fully to recover its costs is inconsistent with the bargain reached by the parties and approved by the Commission. The parties have not reached a new agreement, and EPE is unwilling to go forward under the old agreement. As noted by the Hearing Examiner, it is EPE’s decision going forward whether to seek the issuance of a CCN or

Commission approval of some other appropriate arrangement for this resource so that cost recovery might be possible under the Public Utility Act.

35. With regard to CLC's exception, EPE's statement that it will regard the Commission's adoption of the RD in this area as an order not to use PVGS Unit 3 resolves that issue.

EPE Exception No. 3, CLC Exception No. 5, and YBS Exceptions No. 1-5 (Time-of-Day Rates)

36. EPE takes exception to the residential Time-of-Day ("TOD") rates recommended in the RD, arguing that are not cost-based. EPE states that "[t]he RD openly admits to rejecting revenue neutrality for the class and instead proposes a design intended to attract participation by high use customers rather than recover cost." EPE notes that "[t]o remedy the departure from cost-based rates, the RD recommends EPE be allowed to create a regulatory asset for the limited purpose of 'preserving its ability' to recover the shortfall in revenues in a later proceeding." EPE contends that "there are serious policy problems with this approach which EPE opposes." EPE urges the Commission to adopt the TOD rate design proposed by EPE instead.

37. EPE states the RD's proposed TOD rates were not proposed by any party. EPE complains that "they were assembled post-hearing considering various components of TOD ratemaking discussed among several different testimonies, as well as some theories that were not well fleshed out during the hearing." EPE argues that "despite the RD's yeoman's effort to take on the challenge to design TOD rates post-hearing, the recommended rates were not properly vetted during a hearing, are unsupported and should be rejected."

38. EPE contends that "[t]he most objectionable aspect of the proposed rates is that the rates were designed based on non-cost considerations, such as having the on-peak price be at least

four times the off-peak price, based on the untested premise that such a differential would encourage shifting load. EPE argues that it designed its TOD rates with the on-peak rates set to account for on-peak generation costs, “which sends a more accurate cost-based price signal of EPE’s on-peak cost.”

39. EPE identifies “[t]wo major problems” with the RD’s proposal to use a regulatory asset to cure the lack of cost basis of the recommended rates. The first problem identified by EPE is the fact that the TOD rates are below cost and will be subsidized by other customers when EPE collects the lesser revenues accrued in the regulatory asset from other customers. The second problem identified by EPE is that when EPE requests recovery of the regulatory asset, the request may be contested and lead to further litigation. EPE argues that these problems can be avoided by setting cost-based rates in this proceeding.

40. EPE argues that the RD, without any basis, rejects EPE’s proposal to limit the bill protection provision to the first 250 customers. Under the bill protection provision, a customer can try TOD rates risk-free for a year, and if the customer does not achieve savings, the customer may opt out of the rate and be refunded the additional cost incurred under the TOD rates. EPE argues that, “without explanation or justification, the RD declares that ‘... the bill protection provision should be available to an unlimited number of customers who enroll in the TOD options’.”

41. CLC, in its response to EPE’s exception, argues that EPE’s arguments overlook the considerable flexibility that the Commission enjoys in the design of rate structures. CLC adds that if EPE’s extremely strict interpretation of cost-causation principles in rate design were correct, then “the Company’s own proposals to allocate the change in revenue requirement in a manner that does not compel each rate class to return its fully allocated cost of service and that sets the

fixed monthly customer charges, demand charges, and energy charges for each class in a manner that reflects gradualism rather than pure cost recovery would be fatally flawed, as would the Hearing Examiner's recommendations for virtually every component of every EPE rate schedules arguments also ignore the weaknesses in its own TOD rate design proposal that led to the Hearing Examiner's rejection of its approach."

42. YBS, in its exceptions, states that its focus in this case is the TOD rate design. Even though YBS has filed five exceptions to the RD, all regarding this issue, YBS "also commends the Hearing Examiner for her thoughtful approach." YBS states that "[t]he Hearing Examiner properly found that when the Company's target was, at best, 1 MW in peak demand savings, and when its proposals were rife with inconsistencies and unsupported by the expected analyses that 'EPE has put little effort into proposing effective TOD charges'." YBS goes on to say that the RD "properly finds that EPE's proposed six-hour on-peak periods for TOD rates are an unjustified barrier to customers choosing a TOD option, and therefore should be rejected in favor of a four-hour on-peak duration." YBS also praises the RD for finding "that effective TOD rates must offer a meaningful opportunity for customers to save with an off-peak rate that is lower than the standard summer energy rate; present a large differential between on-peak and off-peak rates to motivate behavior by subscribers; and that customers should not start out "in the hole" if they elect a TOD option, rather a typical TOD customer's summer bill should start out the same under either rate option, prior to the customer achieving savings by shifting usage off-peak."

43. Nevertheless, YBS has filed five exceptions to the RD's TOD rate design. The first area of disagreement is with the specific hours for on-peak. YBS asks the Commission to revisit this requirement, and give customers a choice between a 3:00-7:00 p.m. on-peak period (the one selected in the RD) and a 2:00 – 6:00 p.m. peak period. YBS argues that rates with a 2:00 – 6:00

p.m. peak period will have the greatest effect on coincident peak and attract customers to TOD now, versus optimizing potential demand savings in later years when larger numbers of customers will be participating.

44. YBS's second exception arises from the rate specifications themselves. YBS contends that “[t]he specifications for the TOD rates in Attachments A and F to the RD are flawed in ways that undercut the objectives sought by the Hearing Examiner.” YBS notes the disclosure in the RD that “EPE’s rate design witness on the Technical Committee informed the Hearing Examiner that it was not possible to design TOD charges that result in both a 4:1 price ratio and the TOD off-peak energy charge being lower than the non-TOD summer energy charge.” YBS claims that the rate schedules that it has generated and attached to its exceptions “show[] that more effective TOD rates (i.e., rates with better savings opportunities), which tie to the RD’s class revenue requirements, are indeed possible.” YBS argues that the Hearing Examiner made an error of law “in allowing members of the Expert Committee to present information in an ex-parte setting that went beyond the standard, ministerial calculations attendant to the production of a recommended decision that influenced the final rate specifications, and/or in specifying rate parameters that were not tied to record evidence.”

45. YBS describes its third exception as follows: Hearing Examiner erred in over-emphasizing the ratio between on-peak and off-peak energy rates, instead of the absolute differences between rates, which translates to the TOD savings potential, and was arbitrary in specifying very large ratios for TOD rates in some classes (e.g., 32:1 and 87:1 for Rate 10), while constraining TOD rates in other classes such as Residential to a 4:1 ratio. As a result, TOD customers in classes with the high ratios get access to off-peak energy rates of less than \$0.01/kwh

(in most cases, less than \$0.005), while the savings potentials for the classes with ratios at or near 4:1 are much more modest.

46. YBS describes its fourth exception as follows: the Hearing Examiner erred in adopting EPE's proposal that demand charges for TOD rates be set at 95% of the non-TOD demand charge. Record evidence indicates that demand charges which can be incurred at any time of the day are unnecessary and counter-productive to the objective of TOD rates. An optional rate with a higher summer On Peak rate and no demand charge should also be made available and let actual customer choices inform the commission as to the best way to reduce peak demands.

47. YBS describes its fifth exception as follows: the Hearing Examiner erred in setting a review of TOD rates in 14 months, which may not allow a full summer to be evaluated. The review should be scheduled no earlier than December of 2022, so that the full summer of 2022 can be evaluated.

48. CLC's single exception in this area is similar to YBS's fifth exception. CLC supports the Hearing Examiner's recommendation that EPE's new TOD rates be reviewed in a future docket, but recommends that the date of that filing be extended from 14 months after new rates take effect to a date late in 2022. CLC states that "the TOD peak period is June through September, and with the new rates likely to take effect in June, EPE will have limited opportunity to enlist voluntary participants in optional TOD rates for the whole period." Such a delay would allow consideration of data for a full year of new rates as well as a complete summer peak season.

49. The Commission rejects all of the exceptions in this area. The Hearing Examiner has done an excellent job of crafting a TOD rate design aimed at being as effective as possible at achieving substantial reductions in peak load. The Commission agrees with CLC's comments with regard to the wide latitude enjoyed by the Commission in designing rates. The Commission

also agrees with CLC that EPE's characterization of cost-causation principles is not accurate insofar as that characterization is so strict as to rule out any other considerations in rate design. In the area of TOD rates, in particular, cost causation principles should be relaxed to the extent needed to achieve the overarching goal of decreasing peak load. A successful TOD rate design will result in changes in behavior that will, in turn, change the cost causation profile of the rate class as well as the load profile of the utility. The Hearing Examiner is correct in saying that the many moving parts and feedback effects involved in TOD rates mean that designing them necessarily involves trial and error and frequently revisiting them based their results. Thus, though the Commission understands the concern on the part of CLC and YBS that the RD's recommended period for reviewing the performance of the TOD rates does not include the summer peak period, the Commission adopts the shorter period recommended in the RD. Though this initial review will not answer all questions about the rate design, it will allow for a quicker response and more timely adjustments, if needed. After an initial review, the Commission may decide to establish periods for subsequent reviews that will include the summer peak.

50. With regard to YBS's second exception, the Commission first finds that there are no valid concerns regarding ex parte communications raised here. The Technical Committee is not a party to the case. It is made up of expert witnesses retained by various parties in the matter who, as members of the committee, are bound by agreement to keep confidential their communications with the Hearing Examiner. Thus, the members of the committee are entirely separated from the parties that have retained them when acting as members of the committee. Moreover, the Commission rejects YBS's characterization of the Hearing Examiner's conduct as "allowing members of the Expert Committee to present information in an ex-partie setting that went beyond the standard, ministerial calculations attendant to the production of a recommended

decision . . .” The Hearing Examiner asked for a rate design with certain specifications and received a response that the combination of specifications was not possible. There is nothing remotely improper in this exchange.

51. Insofar as YBS may claim that it was able to produce the rate design that the committee could not, the Commission cannot consider such new evidence after the closure of the record. Moreover, the description of what YBS claims its attachments show does not precisely match the Hearing Examiner’s instructions as described in the RD. Thus, YBS’s exception does not actually call into question the reliability of the committee’s analysis.

52. Finally, in EPE’s next rate case application, EPE must provide a study of the impacts of seasonal charges upon both TOD rate structures and standard rate structures. The study must include an analysis as to whether raising the Winter seasonal charge to the level of the Summer seasonal charge could fund a more effective TOD rate structure, possibly including lower on-peak rates.

EPE Exception No. 4 (Payroll Costs)

53. EPE argues that” the RD invites the Commission to disallow a significant portion of EPE’s payroll expenses on the mistaken basis that EPE’s request recovers merger transaction costs in violation of a stipulated regulatory commitment.” EPE states that the RD finds that the three-year average expense ratio applied to the annualized payroll costs overstates the annualized payroll expense by mischaracterizing EPE’s requested test year adjustment to its expense ratio as an improper request for transaction cost recovery.

54. EPE argues that there are two reasons why the recommended payroll disallowance misinterprets the stipulated regulatory commitment in question. EPE states that its merger commitment was to “not seek recovery of Transaction costs in EPE’s rates.” EPE further states

that “Transaction costs,” in turn, were defined as “those incremental costs paid to advance or consummate the Transaction.” EPE argues that, for the RD’s conclusion to make sense, it “must establish that there are incremental (or additional) costs associated with the Transaction (e.g., third-party contractor or expert costs) within the payroll costs that are in addition to the regular and on-going payroll costs sought by EPE.” EPE contends that the evidence establishes the opposite. EPE argues that payroll costs “cannot be both incremental transaction costs and required on-going costs, and there are no incremental labor costs of any kind in the Company’s requested payroll amount.” Nor are there outside expert costs or third-party contractor cost of any sort included in EPE’s request. As a result, despite the RD’s erroneous conclusion, there are no transaction costs, as defined by the subject regulatory commitment, included in the EPE’s request.

55. Second, EPE argues, the ratemaking process is prospective in nature. EPE contends that, by excluding its known and measurable adjustment to the payroll expense ratio - to reflect payroll costs during the test year period - the RD ensures that the rates will not reflect the conditions during the period when the rates will be in effect. EPE states that this is true because the uncontested testimony shows that the employees covered by the payroll expense will continue to work on projects relating to the provision of service.

56. CLC, in its response to this exception, states that EPE’s proposed “known and measurable change” to base period expenses was contested by CLC witness Mark Garrett, who testified that “the Company’s payroll expense calculations indirectly include recovery of the Sun Jupiter costs.”

57. The Commission rejects this exception. The Commission finds that the Hearing Examiner’s conclusion and recommendation are correct.

EPE Exception No . 5 (Test Year Plant Adjustments)

58. EPE argues that the RD incorrectly recommends rate base exclusion of plant additions placed in service between January 1, 2020, and March 31, 2020. EPE states that the RD explains that “EPE did not synchronize all plant-related balances to March 31, 2020 in its cost of service.” EPE complains that the RD cites a 2017 SPS case to which EPE was not a party, deviates from the 2015 Rate Case Final Order, and other Commission cases allowing for used and useful test year plant additions placed in service within five to six months of a historic Base Period. EPE argues that “the RD’s abrupt shift in policy without evidentiary support should be corrected by the Commission.”

59. CLC, in its response to the exception, states that the RD “merely denies EPE rate base recovery for these post-base period plant additions until its next general rate case.”

60. The Commission rejects this exception. The Hearing Examiner has correctly applied Commission precedent. EPE’s exception mischaracterizes the Hearing Examiner’s recommendation.

EPE Exception No. 6 (Effluent Agreement and Newman Ground Lease)

61. EPE argues that the RD’s exclusion from rate base of unamortized amounts for PVGS Water or Effluent Agreement and the Newman Buffer Zone Land Lease is not based on evidence. EPE contends that the RD adopts adjustments that were presented by CLC post-hearing without any supporting evidence in a revised reconciliation form filed after the Commission’s deadline for submitting post-hearing briefs.

62. CLC, in its response to this exception, notes that EPE again argues that the Commission cannot apply one of its precedents because EPE was not a party to case. CLC also argues that EPE misstates the Commission’s holding in a manner that minimizes EPE’s burden of

proof. CLC states that, in Case No. 10-00086-UT, the Commission held that a utility must demonstrate through a cost-benefit analysis or otherwise that its decision to prepay expenses was in the public interest before such amounts would be included in rate base. CLC contends that this standard requires more than a showing that the purpose of the contract was beneficial to customers; the utility must show that prepaying costs was in the interests of customers.

63. The Commission rejects this exception. The Hearing Examiner has correctly applied Commission precedent.

EPE Exception No. 7 (Unamortized Rate Case Expense Exclusion Rate Base)

64. EPE states that it requested to include in rate base a regulatory asset to recover one-half of its estimated costs to litigate this case. EPE contends that, “[a]s recognized by the RD, EPE’s proposal is consistent with the Commission treatment of this expense in EPE’s 2015 Rate Case and supported by record evidence.” Nevertheless, the RD recommends rate base exclusion of the entire balance of Commission-approved unamortized rate case expenses.

65. CLC, in its response to the exception, notes that EPE claims that “notice and reasonable justification” for the Commission’s denial of rate base treatment for EPE’s rate case expenses “are entirely absent from the record in this case.” However, CLC states, in the next paragraph, EPE acknowledges that CLC witness Mark Garrett proposed this treatment in his pre-filed direct testimony. CLC states that EPE chose not to rebut Mr. Garrett’s testimony. CLC argues that EPE had notice of the sort contemplated by *Mountain States Tel. & Tel. Co. v. New Mexico State Corp. Comm’n*, 1986-NMSC-018, ¶ 26, 104 N.M. 36, 715 P.2d 1332. CLC argues that the Commission has reasonable justification in the record from Mr. Garrett to reinforce the policy decision that it made in SPS’s Case No. 17-00255-UT and to apply that policy to EPE in this case.

66. The Commission rejects this exception. As CLC describes, there was sufficient notice to EPE of and there is a reasonable justification for the denial.

EPE Exception No. 8 (Rate Case Expense Disallowance)

67. EPE states that the RD proposes to disallow rate case expenses totaling \$772,241 for the following: DGC Consulting (\$150,000); Duggins, Wren, Mann & Romero, LLP and Montgomery & Andrews (\$350,000); Randall Childress (\$16,676); Management Applications Consulting, Inc. (\$75,000); Wilson Consulting Group (\$50,000); mailing, meals, and travel after December 11, 2020 (\$130,565). EPE states that these disallowances represent just over 32% of EPE's total requested rate case expense. EPE argues that the disallowance of rate case costs is inappropriate because it is not cost-based and because the proposed disallowances are wholly unsupported by record testimony.

68. CLC, in its response to this exception, citing *PNM Gas Services*, states that the New Mexico Supreme Court agreed with the Commission that the utility's "budget-based estimate [of rate case expenses] with no itemization of costs or evidence of reasonableness" failed to meet the heightened burden of proof set forth in NMSA 1978, Section 62-13-3(B). CLC argues that EPE's exception "turns the *PNM Gas Services* opinion on its head by contending that disallowances of the utility's requested estimated rate case expenses must be cost-based." CLC argues that the RD takes up the Court's invitation to examine EPE's requested rate case expenses individually and to determine what amounts are prudent and reasonable.

69. The Commission rejects this exception. The Commission finds that the Hearing Examiner conducted a careful analysis of the reasonableness of the rate case expenses and removed only unreasonable expenses from consideration.

/ / /

EPE Exception No. 9 (Litigation Expenses)

70. EPE contends that the RD proposes to disallow regulatory and outside litigation expenses based solely on a post-hearing argument made by the City. EPE contends that the RD cites no facts or evidence in the record to support its conclusion that these costs be excluded. EPE argues that the only witnesses to testify on this issue supported recovery of the litigation expenses.

71. CLC, in its response to this exception, contends that EPE incorrectly argues that it was “deprived of a fair hearing” because the CLC was “obligated to present evidence in the hearing challenging EPE’s litigation expenses, not merely to raise the issue in post-hearing briefs.” CLC argues that, under Section 62-13-3(B), the utility has the burden of justifying its litigation expenses without such a challenge. CLC adds that it did, in fact, present evidence at hearing challenging EPE’s claimed litigation expenses.

72. The Commission rejects this exception. The Hearing Examiner correctly recommended disallowing certain litigation expenses.

EPE Exception No. 10 (Accelerated Depreciation for Gas Plants)

73. EPE argues that the RD’s recommendation to deny EPE’s request to shorten the depreciable lives of certain gas plants is contrary to record evidence, inconsistent with the plain language of the REA, and shifts costs to future customers who would not be receiving service from the plants. EPE argues that the RD erred in concluding that the Commission has set a “precedent” of requiring a utility to “present the Commission a firm plan for the disposition or use of the plants” before the utility can seek Commission approval to shorten their service lives to reflect and comply with the REA.

74. CLC, in its response to this exception, states that the “record evidence” to which EPE refers when EPE says that the RD is “contrary to record evidence,” is only that of its own

witnesses. CLC states that “Staff and most of the intervenors filed extensive, thoughtful testimony evaluating all of the options for future disposition or use of EPE’s existing gas-fired generation when the REA’s 80% renewable energy and zero carbon renewable portfolio standards take effect in 2040 and 2045, respectively”. CLC argues that the “plain language” of the REA to which EPE alludes is neither identified nor discussed in its exceptions. CLC states that its witness Mark Garrett presented five points in opposition to accelerated depreciation, one of which included five alternative means of disposing of gas-fired generation dedicated to New Mexico within the time frame set by the REA.

75. The Commission rejects this exception. The Commission finds that Hearing Examiner’s recommendation in this area is supported by the record and within the Commission’s authority.

EPE Exception No. 11 (FPPCAC Reconciliation Proposal Rejection)

76. EPE takes exception to the RD’s recommendation to deny approval of EPE’s reconciliation request, arguing that the recommendation is arbitrary and contrary to prior Commission Orders and record evidence. EPE notes that the RD agrees that the Commission has previously approved requests similar to EPE’s request in this case to reconcile its fuel and purchased power costs collected through the fuel and purchased power cost adjustment clause (“FPPCAC”) from January 1, 2017 through December 31, 2019 in EPE’s last rate case (Case No. 15-00109-UT) and last fuel continuation case (Case No. 18-00006-UT). The RD nevertheless concludes that EPE’s reconciliation request in this case should not be approved based on the finding that no pre-filed Staff or Intervenor testimony addressed and supported EPE’s request. EPE argues that there are at least two significant errors in this recommendation. First, EPE argues

that there is no support or justification for the RD's unreasonable conclusion that such testimony in support is required for approval.

77. EPE goes on to argue that the RD's conclusion that EPE's request should be rejected is not evidence based. EPE argues that the RD makes no findings with respect to the sufficiency of uncontested evidence from Mr. Buraczyk demonstrating the reasonableness of EPE's fuel and purchased power costs¹ and Ms. Borden presenting the FPPCAC reconciliation for 2017 through 2019.

78. CLC, in its response to this exception, states that EPE "in effect argues that the Commission must approve its request for reconciliation of its FPPCAC for the years 2017 through 2019 based on past practice in EPE's rate cases and FPPCAC continuation cases." CLC contends that, "[o]nce again, EPE in effect claims that it is entitled to the same Commission ruling as in past cases based on similarly skimpy evidence." CLC argues that EPE does not respond in any manner to the Recommended Decision's finding that neither the Public Utility Act nor the FPPCAC Rule, 17.9.550 NMAC, refers to a reconciliation of fuel and purchased power costs and revenues. .

79. The Commission rejects this exception. The Commission agrees with the Hearing Examiner that "[a]bsent testimony from a Staff or intervenor witness that he or she reviewed EPE's reports and recommended approval of EPE's reconciliations, EPE's request should be denied."

CLC Exception No. 2 (Capital Structure)

80. CLC notes that the RD approves EPE's request for a capital structure for ratemaking purposes of 51% equity and 49% debt, on the theory that it is a "known and measurable change" to the Company's actual capital structure of 49.21% common equity and 50.79% debt on

¹ EPE Ex. 30 (Buraczyk Dir.) 86:1 to 95:7.

December 31, 2019, the base period end. CLC excepts to this finding because in relying on an equity infusion of \$125 million made by EPE's new parent, Sun Jupiter Holdings LLC ("Sun Jupiter") in September 2020, CLC argues that the RD disregards precedent and fails to consider policy reasons for using an imputed capital structure.

81. CLC states that its witness, David J. Garrett, testified about the importance of setting a regulatory capital structure that is optimal for the purposes of minimizing the company's overall cost of capital, not one that is optimal for shareholders because it maximizes their return on investment. CLC argues that this is especially true for a utility that is not publicly traded and can alter its actual capital structure dramatically, as, according to CLC, EPE did in September 2020, without prior Commission approval to issue securities. CLC further argues that EPE's proposal to increase the equity component of its capital structure through a one-time equity infusion from Sun Jupiter should be rejected for reasons identified by the Hearing Examiner in the context of EPE's authorized return on equity, which is always a hypothetical or imputed figure. CLC argues that EPE tied its return on equity and its capital structure requests to its ability to maintain its current credit rating as capital is required to finance its construction program. CLC cites the statement that granting the Company's requested return on equity "arguably would result in New Mexico customers subsidizing the cost of Newman 6 to serve only Texas customers" after this Commission denied EPE a certificate of public convenience and necessity ("CCN") in Case No. 19-00349-UT. CLC argues that the same is true for its capital structure. CLC states that Mr. Garrett quantified the difference at over \$800,000 annually.

82. CLC notes that the RD approves EPE's request for a capital structure for ratemaking purposes of 51% equity and 49% debt, on the theory that it is a "known and measurable change" to the Company's actual capital structure of 49.21% common equity and 50.79% debt on

December 31, 2019, the base period end. CLC excepts to this finding because, in relying on an equity infusion of \$125 million made by EPE's new parent, Sun Jupiter Holdings LLC ("Sun Jupiter") in September 2020, the RD "disregards precedent and fails to consider policy reasons for using an imputed capital structure."

83. CLC states that its witness, David J. Garrett, testified about the importance of setting a regulatory capital structure that is optimal for the purposes of minimizing the company's overall of capital, not one that is optimal for shareholders because it maximizes their return on investment. This is especially true for a utility that is not publicly traded and can alter its actual capital structure dramatically, as EPE did in September 2020, without prior Commission approval to issue securities. Moreover, CLC argues, EPE's proposal to increase the equity component of its capital structure through a one-time equity infusion from Sun Jupiter should be rejected for reasons identified by the Hearing Examiner in the context of EPE's authorized return on equity, which is always a hypothetical or imputed figure. CLC states that EPE tied its return on equity and its capital structure requests to its ability to maintain its current credit rating as capital is required to finance its construction program. CLC states that the RD notes that granting EPE's requested return on equity "arguably would result in New Mexico customers subsidizing the cost of Newman 6 to serve only Texas customers" after this Commission denied EPE a certificate of public convenience and necessity ("CCN") in Case No. 19-00349-UT. CLC contends that the same is true for capital structure, and states that Mr. Garrett quantified the difference at over \$800,000 annually.

84. EPE, in its response to this exception, argues that this case is not materially distinguishable from cases in which the Commission has established utility capital structures in a manner consistent with that used in the RD. EPE goes on to argue that, CLC, being fully aware

of that fact, crafts a misguided policy justification for using an “optimal” capital structure rather than considering the actual economic situation that exists for EPE and its customers at this moment in time. EPE argues that CLC’s argument “ignores the well-established rule that the ratemaking process must balance the investor’s interest against the ratepayer’s interest, and that neither interest is paramount. EPE argues that this standard does not support an “optimal” capital structure for customers that is calculated independent of the needs of investors. Nor, according to EPE, does it require a capital structure that creates risk for customers—i.e.—with respect to negative impacts on credit ratings and costs associated with those negative impacts. EPE further argues that, contrary to the argument put forward by CLC, an appropriate capital structure is the result of careful consideration of a number of factors, only one of which is the incremental cost to customers resulting from increasing the percentage of equity in the capital structure.

85. The Commission partially accepts this exception. The Commission finds that EPE’s capital structure at the end of the test-year period should not include the \$125 million equity infusion by Sun Jupiter on September 24, 2020. The Commission finds that, at nearly nine months after the end of the base period, the infusion is too remote from the base period to be included in the test-year period. As the RD notes, in the “2010 PNM Rate Case,” the Commission included in the test-year period known and measurable changes to capital structure up to six months after the end of the base period. The Commission finds that six months after the base period end is a reasonable cut-off point for including known and measurable changes to capital structure to maintain a reasonable relationship between the base period and the test-year period. Accordingly, the Commission finds that the capital structure at the end of the base period is the capital structure at the end of the test-year period for this matter.

86. This capital structure is also a better result for ratepayers as it leads to a lower revenue requirement and lower rates. Thus, this is also a better policy choice as an imputed capital structure. As shown in Mr. Garrett's testimony, EPE's unusually low debt ratio results in an unreasonably high weighted-average cost of capital to the detriment of ratepayers.

CLC Exception No. 3 (Regulatory Expense for Docket Nos. 19-00348-UT and 19-00349-UT)

87. CLC notes that the RD denies the CLC's objections to EPE's inclusion in rates as part of FERC Account 928 "Regulatory Commission Expense" amounts associated with three NMPRC proceedings. CLC accepts the Hearing Examiner's determination that EPE's claimed expenses for Case No. 18-00109-UT may be representative of costs for annual Renewable Energy Act ("REA") portfolio plan filings, but takes exception to including in rates, on an annual basis, \$185,296 incurred during the 2019 base period and part of 2020 for NMPRC Case No. 19-00348-UT, EPE's application for approval of 20-year purchased power agreements, and \$135,777 incurred during the base period and part of 2020 for Case No. 19-00349-UT, the Newman 6 CCN case. For those two cases EPE incurred \$105,226 during the base period and \$215,847 in 2020.

88. CLC argues that, "[a]lthough EPE characterizes its attempt to recover costs regulatory case expenses incurred over a multi-year period as "known and measurable changes," in effect it is seeking regulatory asset treatment of specific, non-recurring costs incurred over a span of more than one year on an annual basis." CLC contends that, if EPE does not file another rate case for five years, as the RD assumes, EPE will recover a total of more than \$1.6 million for those two unique, non-recurring cases. CLC goes on to argue that, over five years, EPE would recover \$678,885 to prosecute Case No. 19-00349-UT, despite the Commission finding in that case that it was "troubling" that EPE "manifest[ed] an intent not to comply with the recent

legislation" amending the REA and that it was "beyond troubling" that EPE would argue that the Texas commission's approval of a CCN for a gas fired-plant made it "prudent" for this Commission to do the same.

89. EPE, in its response to this exception, states that, "[c]onsistent with longstanding Commission precedent, the Hearing Examiner recommends EPE be allowed to recover regulatory commission expenses in FERC Account 928 'Regulatory Commission Expense'." EPE argues that the Hearing Examiner correctly recommended allowing recovery of costs associated with these two cases based on the finding that it is probable that EPE will file an application for approval of a PPA and/or CCN prior to filing its next rate case, in light of the outcome of the Commission's recent denial of the Newman 6 CCN, supported by uncontested testimony of Mr. Schichtl. EPE further argues that the Hearing Examiner recommends recovery of the proposed regulatory commission costs because expenses for Case Nos. 19-00348-UT and 19-00349-UT are representative of the costs that EPE will incur during the period rates are in effect, including costs anticipated in seeking resource approval before the next rate case is filed.

90. The Commission rejects this exception. The Commission finds that the Hearing Examiner's recommendation is reasonable and consistent with applicable precedent.

CLC Exception No. 4 (Rate Base Inclusion of Projects Not Reported under Rule 440)

91. CLC states that Rule 17.5.440.9(A) NMAC requires utilities to report to the Commission on the nature, purpose, estimated cost, and engineering and economic feasibility of extensions, improvements, and additions before proceeding with generation projects costing at least \$1 million or transmission or distribution projects costing \$500,000 or more. CLC contends that EPE seeks to add to New Mexico rate base about \$175 million of generation, transmission, and distribution investments since 2015, the overwhelming portion of which were not reported

under Rule 440 (except for Montana Units 3 and 4). CLC states that the RD rejects CLC's three alternative proposals for the treatment of proposed additions to rate base for which EPE did not file Rule 440 reports, concluding that the Commission's only option is to impose cash penalties under NMSA 1978, Section 62-12-4, which the Hearing Examiner does not recommend. CLC argues that the Commission "should not allow EPE to benefit from such repeated and blatant violations of its rules."

92. EPE, in its response to this exception, argues that the RD correctly recognizes that there is no record evidence to support CLC's allegations and also explains that there is no requirement that the cost of plant that is added to rate base must equal the estimated cost in a Rule 440 report. EPE further argues that CLC's exception to the RD's recommendation does not offer a new rationale or explanation, but continues to advocate for a conclusion that is disconnected from both the evidentiary record and the law. EPE notes that the City did not raise its Rule 440 argument until after the close of the hearing. EPE further argues that, because the City did not raise this argument until that time, EPE was deprived of the opportunity to introduce any evidence to respond to CLC's claims.

93. The Commission rejects this exception. The Commission finds the reasoning of the RD sound in rejecting CLC's recommendations. However, the Commission finds that CLC's exception raises potential issues worth investigating with regard to EPE's Rule 440 reporting. The Commission plans to address such potential issues in a separate, investigatory docket.

94. The Commission accepts and adopts all findings of fact and conclusions of law throughout the RD except as modified in this Order.

95. Attachments A through F to this Order are based upon Attachments A through F to the RD, with the exception that the revenue requirement is decreased due to the adoption, in this

Order, of a capital structure more favorable to ratepayers than the capital structure recommended in the RD. The Commission adopts the RD's recommended rate design criteria, as reflected in the attachments.

IT IS THEREFORE ORDERED:

- A. The Decretal Paragraphs contained in the RD are incorporated by reference as if fully set forth herein and are ADOPTED, APPROVED, and ACCEPTED as orders of the Commission, except as modified in this Order.
- B. The RD is ADOPTED, APPROVED, and ACCEPTED in its entirety, except as modified in this Order.
- C. This Order is effective immediately.
- D. A copy of this Order shall be served upon all parties listed on the attached certificate of service via email, if the email addresses are known, and if not known, by regular mail.

Kelly A. Tomblin, El Paso Electric President and CEO, issues a statement regarding the 2020 Rate Case Order issued today by the New Mexico Public Regulation Commission:

"We are very disappointed with the order issued today by the New Mexico Public Regulation Commission (PRC) regarding our rate case proceeding filed in 2020 that was supposed to review New Mexico's responsibility for \$1.2 billion in total investments made by EPE since 2015. After a proceeding extending over more than a year, the PRC issued a decision which is not in the best interests of our customers.

There are three major decisions we find disconcerting in this order. First, with New Mexico recently implementing some of the most aggressive clean energy goals in the country, it is troubling that the PRC is not allowing EPE to utilize and recover on an existing carbon-free generation asset to serve our New Mexico customers. Second, the order does not allow EPE to recover the full cost of salaries and benefits for our employees, which is inconsistent with standard regulatory framework, including prior rate cases in New Mexico. Finally, the PRC's order lowers EPE's allowed return on equity, resulting in one of the lowest amongst all utilities in the United States, severely limiting the extent to which EPE can reasonably invest its capital in New Mexico.

This PRC order leaves EPE with no choice but to immediately appeal the decision to the New Mexico Supreme Court and may require EPE to file another rate case next year, a costly and administrative burden which will also delay EPE's plans for investment in New Mexico. It is unfortunate that we need to take action that extends this case even longer, but it is necessary that EPE receives fair regulatory treatment in order to promote investment in the clean and reliable service our New Mexico customers deserve."

About El Paso Electric

El Paso Electric is a regional electric utility providing generation, transmission, and distribution service to approximately 444,300 retail and wholesale customers in a 10,000-square mile area of the Rio Grande valley in west Texas and southern New Mexico.

EL PASO ELECTRIC COMPANY'S RESPONSE TO
TEXAS INDUSTRIAL ENERGY CONSUMERS'S FIRST REQUEST FOR INFORMATION
QUESTION NOS. TIEC 1-1 THROUGH TIEC 1-17

TIEC 1-7:

Please provide a projection of EPE's capital expenditures out over the next five years, and an estimate of the sources of cash available to fund these capital expenditures broken out by external debt markets, external equity infusions from its parent company, retained earnings, depreciation expense, deferred taxes and other sources (explain). Please also include in this response the funding planned for debt maturity, retirements and/or refinancing over this same time period.

RESPONSE:

See TIEC 1-7, Attachment 1 – Confidential. Also see the direct testimony of El Paso Electric Company witness Lisa D. Budtke, page 2, lines 26 through 30 and page 3, lines 1 through 25, and page 4, lines 14 - 28.

TEXAS INDUSTRIAL ENERGY CONSUMERS'S FIRST REQUEST FOR INFORMATION
QUESTION NOS. TIEC 1-1 THROUGH TIEC 1-17

TIEC 1-8:

In electronic format with all formulas intact, please provide the monthly average balances for construction work in progress and short-term debt for the most recent 13-month period. Please identify the amount of short-term debt included in the regulatory capital structure

RESPONSE:

Please see TIEC 1-8, Attachment 1 for monthly balances of construction work in progress and short-term debt for the most recent 13-month period. There is no short-term debt included in the regulatory capital structure. Short-term borrowings under the revolving credit facility for the financing of nuclear fuel through Rio Grande Resources Trust II are excluded from the Company's capital structure.

Please provide the amount of capitalized interest estimated to be paid during the test year related to construction projects.

RESPONSE:

El Paso Electric Company (“EPE”) capitalizes Allowance for Funds Used During Construction (“AFUDC”) on construction projects. AFUDC includes an interest component, Allowance for Borrowed Funds Used During Construction (“ABFUDC”) and an equity component, Allowance for Other Funds Used During Construction (“AOFUDC”). EPE capitalized \$6,396,330 of AFUDC during the test year, comprised of ABFUDC in the amount of \$3,797,559 and AOFUDC in the amount of \$2,598,771.

EL PASO ELECTRIC COMPANY'S RESPONSE TO
TEXAS INDUSTRIAL ENERGY CONSUMERS'S FIRST REQUEST FOR INFORMATION
QUESTION NOS. TIEC 1-1 THROUGH TIEC 1-17

TIEC 1-10:

In electronic format with all formulas intact, please provide the five-year projected and five-year historical capital structure, capital expenditures and capital funding. Please include a breakdown of all sources of equity capital including retained earnings, paid-in capital, and debt capital, both long-term and short-term debt, etc.

RESPONSE:

Please see TIEC 1-10, Attachment 1 for historical capital structure and capital funding.

Five-year historical capital expenditures are as follows:

<u>Year</u>	<u>Capital Expenditures</u>
2016	\$ 235,348,595
2017	211,226,757
2018	251,397,664
2019	229,278,598
2020	260,948,818

Please see TIEC 1-10, Attachment 2 Confidential For five-year projected data. For projected capital expenditures, refer to TIEC 1-7, Attachment 1 Confidential.

(1) Excludes long-term debt financings and short-term borrowings for RGRT.

(2) El Paso Electric purchased, in lieu of redemption, all of the 2009 Series A 7.25% PCBs with an aggregate principal amount of \$63.5 million, and all of the 2009 Series B 7.25% PCBs with an aggregate principal amount of \$37.1 million, on February 1, 2019 and April 1, 2019, respectively, utilizing funds borrowed under the RCF. On May 22, 2019, the Company reoffered and sold \$63.5 million aggregate principal amount of 2009 Series A 7.25% PCBs and \$37.1 million aggregate principal amount of 2009 Series B 7.25% PCBs with a fixed interest rate of 3.60% per annum until the PCBs mature on February 1, 2040 and April 1, 2040, respectively. Proceeds from the remarketing of the PCBs were primarily used to repay outstanding short-term borrowings under the RCF.

EL PASO ELECTRIC COMPANY'S RESPONSE TO
TEXAS INDUSTRIAL ENERGY CONSUMERS'S FIRST REQUEST FOR INFORMATION
QUESTION NOS. TIEC 1-1 THROUGH TIEC 1-17

TIEC 1-11:

Please describe how EPE accesses external capital. If the Company's external capital is provided by its parent company under a credit agreement, please describe the terms of the credit agreement and the associated service fees.

RESPONSE:

El Paso Electric ("EPE") accesses external capital via its revolving credit facility ("RCF"), issuing long-term debt in the capital markets, and requesting equity infusions from its parent, Sun Jupiter Holdings LLC ("Sun Jupiter"). EPE utilizes its RCF to finance daily operations and ongoing utility construction projects. In addition to long-term debt issuances in the debt capital markets, EPE may also seek additional capital in the form of equity infusions from Sun Jupiter to maintain its capital structure in compliance with PUCT Docket No. 49849 and its investment grade credit ratings. EPE does not have nor utilize a credit agreement provided by its parent. EPE is prevented from doing so, due to the regulatory commitments outlined in PUCT Docket No. 49849.

EL PASO ELECTRIC COMPANY'S RESPONSE TO
TEXAS INDUSTRIAL ENERGY CONSUMERS'S FIRST REQUEST FOR INFORMATION
QUESTION NOS. TIEC 1-1 THROUGH TIEC 1-17

TIEC 1-12:

Please provide the most recent senior secured, unsecured and corporate credit ratings of EPE, assigned by S&P, Moody's and Fitch. Also, please provide EPE's S&P business and financial risk profiles and identify the benchmark volatility table (standard, medial or low) used by S&P.

RESPONSE:

The most recent senior unsecured and corporate credit ratings of El Paso Electric Company (“EPE”) are provided below. EPE does not have any secured debt and therefore has not been assigned a secured debt rating by Moody’s or Fitch. EPE is no longer rated by S&P.

Rating Agency	Moody's	Fitch
Senior Secured Rating	N/A	N/A
Senior Unsecured Rating	Baa2	BBB+
Corporate Rating	Baa2	BBB

EL PASO ELECTRIC COMPANY'S RESPONSE TO
TEXAS INDUSTRIAL ENERGY CONSUMERS'S FIRST REQUEST FOR INFORMATION
QUESTION NOS. TIEC 1-1 THROUGH TIEC 1-17

TIEC 1-13:

To the extent not already provided, please provide in electronic format with all formulas intact, EPE's credit metric calculations relied on by S&P and Moody's for the last five years and near-term projections if available. Please include all financial statements used to derive these credit metrics. In addition, please provide S&P and Moody's benchmark ranges for the credit metrics.

RESPONSE:

See TIEC 1-13, Confidential Attachment 1, for the credit metric calculations. Refer to Schedule J, pages 8-9, 10, and 12 in this filing for historical financial statements for year 2020, TIEC 1-13, Attachment 2 for historical financial statements for 2016-2019 and TIEC 1-13, Confidential Attachment 3, for forecasted financial statements for 2021-2025. The financial statements shown in TIEC 1-13, Confidential Attachment 3, were included in the Confidential Workpapers to Schedules K-6 and K-7 in this filing. The relevant ratios are provided for Moody's and Fitch, the two rating agencies currently covering the Company. S&P discontinued their coverage of the Company; therefore, S&P ratios are not provided as they are no longer monitored.
