Critical facilities are structures and institutions necessary for a community's response to and recovery from emergencies. Critical facilities must continue to operate during and following a disaster to reduce the severity of impacts and accelerate recover. Typically we consider critical facilities to be hospitals/medical facilities, police and fire stations, schools, emergency operation centers, evacuation centers, and airports/heliports.

\*Jurisdictions may want to include infrastructure systems such as water and wastewater plants, power utilities, and communication centers. If there is an additional kind of facility jurisdictions want to include, we can include them in the risk assessment as well.
