Zephyr Water purchases treated water from Brown County Water Improvement District. Salt Creek pump station(3660 Salt Creek Dr., Early, Texas 76802), is our entry point. Zephyr Water has 4 pumps at this location-#1 150hp, #2 75hp, #3 75hp and #4 40 hp. These pumps fill ground storage tanks and elevated storage tanks to supply our entire system with safe drinking water.

Salt Creek Station is equipped with a diesel powered manual switch back up generator.

Zephyr Water/FM 1467 Station, 11886 CR 367, May, Texas 76857, pumps water into a standpipe at May. This standpipe provides water and pressure to Holder, Thunderbird Bay, Harbor Point, and Tamarack subdivisions. This FM 1467 station is servicing approximately 800 customers. It also provides storage and disinfection for the system.

Zephyr Water/Harbor Point station, 4700 Lakeshore May, Texas 76857, pumps water to the standpipe at Tamarack Mt. Which provides water storage and pressure to Tamarack and Harbor Point. There is no back up power at this location.

Zephyr Water/Station #3, 7598 Hwy 84/183E, Early, Texas 76802, supplies approximately 500 customers in the Zephyr and Blanket area. #3 currently does not have any back up power source. Plans are to have a back up generator soon.

Zephyr Water Supply has an Emergency Inter Connection with the City of Blanket. This connection is maintained for use in the event of an emergency the City of Blanket may have to maintain their water supply.

Terry Edgar
General Manager
