AJF-1            Resume of Amanda J. Frazier

**DIRECT TESTIMONY OF  
AMANDA J. FRAZIER**

**I. INTRODUCTION**

**Q. Please state your name, title, and business address and why you are testifying.**

A. My name is Amanda J. Frazier. I am the Senior Vice President of Regulatory Policy for Vistra Corp., the parent company of TXU Energy Retail Company LLC (TXU Energy), Ambit Texas, LLC (Ambit), Luminant ET Services Company LLC (ETS), TriEagle Energy LP (TriEagle), and Value Based Brands LLC dba 4Change Energy, Express Energy, and Veteran Energy (VBB) (collectively, the TXU load-serving entities or TXU LSEs) and the parent company of Luminant Energy Company LLC (Luminant Energy). My business address is 1005 Congress Avenue, Suite 750, Austin, Texas 78701. I am testifying to present the TXU LSEs' and Luminant Energy's perspectives on issues in this proceeding that could materially affect compliance with the relevant Texas law and policy concerning the competitive electricity market in the Electric Reliability Council of Texas (ERCOT) region of the state of Texas.

**Q. What are your current job responsibilities?**

A. Among other things, I am responsible for developing, overseeing, and implementing the regulatory policy strategies and advocacy efforts of Vistra Corp. and its subsidiaries across the United States. I am personally involved in much of the regulatory strategy development, implementation, and advocacy for those companies. Accordingly, I have extensive knowledge of the functioning of the ERCOT electricity markets and the impacts of Public Utility Commission of Texas (Commission or PUC) decisions on those markets and market participants.

1   **Q.    Please summarize your educational background.**

2    A.    I received a Bachelor of Arts degree from Baylor University in Waco, Texas, and  
3           a law degree from Vanderbilt University in Nashville, Tennessee.

4   **Q.    Please describe your work experience.**

5    A.    Prior to being appointed Senior Vice President of Regulatory Policy at Vistra Corp.,  
6           I was Senior Director of Regulatory Policy at Energy Future Holdings, and Senior  
7           Manager of Regulatory Affairs at Luminant. Before that, I practiced law at major  
8           law firms, including Bracewell & Giuliani, Hunton & Williams, and Worsham,  
9           Forsythe & Wooldridge. In each of these positions, my practice involved electricity  
10          industry matters, especially matters pertaining to the ERCOT markets. In sum, I  
11          have 20 years of experience with regulatory policy and legal issues in Texas and  
12          the United States, with a specific focus on matters before competitive wholesale  
13          market operators and regulators such as ERCOT and the Commission. For the past  
14          nine years, I have directed a team of regulatory policy professionals, in partnership  
15          with commercial teams, to advocate on wholesale and retail market policy issues  
16          and promote enhancements to regulatory constructs such as the ERCOT Protocols  
17          (Protocols) and Commission rules. I have, at various times, participated as a voting  
18          member on the ERCOT Technical Advisory Committee (TAC), Protocol Revisions  
19          Subcommittee (PRS), and Wholesale Market Subcommittee (WMS), and served on  
20          a number of other ERCOT subcommittees and task forces. My resume is attached  
21          as Exhibit AJF-1.

1   **Q.     Have you previously testified before this Commission?**

2   A.     Yes. I have testified before the Commission in Docket No. 45624, *Application of*  
3           *the City of Garland to Amend a Certificate of Convenience and Necessity for the*  
4           *Rusk-to-Panola Double-Circuit 345-kv Transmission Line in Rusk and Panola*  
5           *Counties*, and in Docket No. 46368, *Application of AEP Texas North Company for*  
6           *Regulatory Approvals Related to the Installation of Utility-Scale Battery Facilities.*

7   **Q.     Please summarize your testimony in this proceeding.**

8   A.     In my testimony, I will:

- 9           • describe the interests of the TXU LSEs and Luminant Energy in this  
10           proceeding;
- 11          • identify issues on which the Commission should issue a decision in this  
12           proceeding and explain how those issues should be decided;
- 13          • describe and demonstrate why any implementation of “netting” in this  
14           proceeding would contravene the applicable Texas law and would not be  
15           good public policy;
- 16          • explain why issuance of a financing order in this proceeding that includes  
17           “netting” would be unlawful because it would not support wholesale market  
18           integrity and because it would not protect the public interest; and
- 19          • explain that if “netting” is applied by the Commission to determine the  
20           amount of bond proceeds a load-serving entity should receive, then that  
21           same rationale should be applied to determine the extent of the load-serving  
22           entity’s liability for uplift charges. The symmetry in the statutory language  
23           dictates that if netting applies to remitting proceeds “to load-serving entities

1                   on a load-ratio basis,” then it must also apply to impose uplift charges, since  
2                   the statute similarly states those charges must be assessed on “load-serving  
3                   entities on a load-ratio share basis.”

4   **Q.    Will you explain what you mean by “netting”?**

5   A.    Yes. The issue of “netting” was raised in this proceeding by the Commission’s  
6       *Order Requesting Briefing*, issued on July 21, 2021. In that order, the Commission  
7       noted that Subchapter N requires that a debt obligation order “must provide the  
8       process for remitting the proceeds of the financing to load-serving entities *who were*  
9       *exposed to the costs included in the uplift balance.*” (emphasis in original). (Note  
10       that throughout my testimony, if emphasis is shown in quoted text, I have added  
11       that emphasis unless I note otherwise, as I have here). The briefing order then posed  
12       two questions, the first of which captures the “netting” issue: “Does the phrase  
13       *exposed to the costs included in the uplift* contemplate offsetting the amounts paid  
14       in excess of the commission’s system-wide offer cap by amounts received in excess  
15       of the commission’s system-wide offer cap? If so, does this offset include amounts  
16       received by entities affiliated with the entity that made such payments?” (emphasis  
17       in original). Stated succinctly, the question of netting asks whether any potentially  
18       offsetting revenues received by the load-serving entity or its affiliates should be  
19       applied to reduce the amount of Uplift Balance costs to which the load-serving  
20       entity was exposed during Winter Storm Uri for the purpose of determining the  
21       amount of bond proceeds to be remitted to the load-serving entity. For all the  
22       reasons explained in my testimony, I believe the answer is “no.”

1   **Q.     Do you sponsor any Exhibits?**

2   A.     Yes. Exhibit AJF-1 is my resume. Exhibit AJF-2 is the August 2, 2021 letter sent  
3           to the Commissioners by Texas House State Affairs Committee Chairman Chris  
4           Paddie and filed in this proceeding. Exhibit AJF-3 is a transcript of testimony  
5           regarding House Bill No. 4492 offered before the House Committee on State  
6           Affairs on April 1, 2021 as well as House floor debate on May 5 and 6, 2021 and  
7           testimony in the Senate Committee on Business and Commerce on May 20, 2021.  
8           Exhibit AJF-4 is a transcript of Senate floor debate concerning House Bill No. 4492  
9           on May 26, 27, and 30, 2021. Exhibit AJF-5 is an excerpt from the House Journal  
10          for May 30, 2021.

11   **Q.     How is your testimony organized?**

12   A.     Section II of my testimony summarizes ERCOT's application for a debt obligation  
13          order (aka a financing order). Section III describes the interests of the TXU LSEs  
14          and Luminant Energy in this proceeding. Section IV identifies some issues that  
15          should be determined in this proceeding and provides my recommendations  
16          regarding how those issues should be decided. Section V explains why any  
17          implementation of "netting" in this proceeding would contravene applicable Texas  
18          law and would be improper public policy. Section VI explains why issuance of a  
19          financing order that includes "netting" would be unlawful under Subchapter N  
20          because it would not support market integrity and would not protect the public  
21          interest. Section VII describes the reasons for my conclusion that if the Commission  
22          adopts "netting" for determining the amount of bond proceeds a load-serving entity  
23          should receive, it must commensurately use "netting" to determine the extent of

1 that load-serving entity's liability for payment of uplift charges that will be used to  
2 repay the bonds. Section VIII provides a summary-level conclusion to my  
3 testimony.

## 4 II. DESCRIPTION OF ERCOT'S APPLICATION

5 **Q. Please briefly describe the application that initiated this proceeding.**

6 A. On July 16, 2021 ERCOT filed its application for a debt obligation order to finance  
7 the Uplift Balance as authorized by Subchapter N of Chapter 39 of the Public Utility  
8 Regulatory Act (PURA) (the Application). The Application requests Commission  
9 approval of issuance of \$2.1 billion in bonds to produce proceeds that will be  
10 remitted to load-serving entities who were exposed to costs included in the Uplift  
11 Balance as defined in PURA Section 39.652(4).

12 **Q. What are the costs that make up the "Uplift Balance" that ERCOT seeks to**  
13 **securitize?**

14 A. PURA Section 39.652(4) defines the "Uplift Balance" as "an amount of money of  
15 not more than \$2.1 billion that was uplifted to load-serving entities on a load ratio  
16 share basis due to energy consumption during the period of emergency for  
17 reliability deployment price adder charges and ancillary services costs in excess of  
18 the commission's system-wide offer cap[.]" The "period of emergency" referenced  
19 in that definition includes all the days February 12, 2021 through and including  
20 February 20, 2021. (PURA Section 39.652(3)). Thus, the uplift balance covers  
21 reliability deployment price adder (RDPA) charges and ancillary services charges  
22 over \$9,000 per megawatt hour (the system-wide offer cap) incurred by load-  
23 serving entities during the height of Winter Storm Uri.

1 RDPA charges are charges included in the market-clearing energy price that  
2 ERCOT assesses to market participants during periods when conditions trigger  
3 application of an administrative price adder intended to reflect the fact that  
4 generating units have been deployed to bolster system reliability because of high  
5 demand, low supply, or both. The RDPA is also paid to generators that are available  
6 but are not being dispatched for energy. Because those generators are not  
7 dispatched for energy, the RDPA charges are not recovered in the price of energy  
8 and are therefore uplifted to loads on a load-ratio share basis. The uplift balance  
9 only includes this latter form of RDPA that was uplifted on a load-ratio share basis.

10 Ancillary services costs over the system-wide offer cap (which was \$9,000  
11 per megawatt hour during the period of emergency) are costs to acquire responsive  
12 reserve service, regulation up service, regulation down service, or non-spinning  
13 reserve service that, due to conditions during the period of emergency, were  
14 established by ERCOT pricing mechanisms at levels exceeding \$9,000 per  
15 megawatt hour in some instances.

16 Notably, the statute defines these two costs (RDPA charges not recovered  
17 in the price of energy and ancillary services charges over \$9,000 per megawatt  
18 hour) that make up the Uplift Balance as costs that were uplifted *to load-serving*  
19 *entities on a load-ratio-share basis*.

20 **Q. What is the purpose of the securitization for which ERCOT seeks Commission**  
21 **approval?**

22 A. The statute, in Section 39.651(b), says that the purpose is to “allow wholesale  
23 market participants who were assessed extraordinary uplift charges due to

1 consumption during the period of emergency to pay those charges over a longer  
2 period of time, alleviating liquidity issues and reducing the risk of additional  
3 defaults in the wholesale market.” To accomplish that purpose, the Legislature  
4 mandated a sole use of the securitization bond proceeds: “The proceeds of debt  
5 obligations issued under this subchapter must be used solely for the purpose of  
6 financing reliability deployment price adder charges and ancillary service costs that  
7 exceeded the commission’s system-wide offer cap and were uplifted to load-  
8 serving entities based on consumption during the period of emergency.” And the  
9 Legislature specified who is to receive bond proceeds—Section 39.653(b)(3)  
10 requires that the financing order “provide the process for remitting the proceeds of  
11 the financing to load-serving entities who were exposed to the costs included in the  
12 uplift balance, including a requirement for the load-serving entities to submit  
13 documentation of their exposure.” Thus, in summary, the Legislature directed that  
14 the securitization process result in ERCOT issuing bonds and giving the proceeds  
15 to load-serving entities who were exposed on a load-ratio share basis to the RDPA  
16 and ancillary services costs that make up the Uplift Balance, to alleviate liquidity  
17 issues and reduce the risk of (but not prevent) additional defaults in the market.

18 **III. THE TXU LSEs’ AND LUMINANT ENERGY’S**  
19 **INTERESTS IN THE APPLICATION**

20 **A. Description of the Relevant Companies**

21 **The TXU LSEs**

22 **Q. What companies make up the group that you describe as the “TXU LSEs”?**

23 A. The following companies are load-serving entities indirectly owned by Vistra Corp.  
24 who serve retail customers in the ERCOT region: TXU Energy Retail Company

1        LLC (TXU Energy), Ambit Texas, LLC (Ambit), Luminant ET Services Company  
2        LLC (ETS), TriEagle Energy LP (TriEagle), and Value Based Brands LLC dba  
3        4Change Energy, Express Energy, and Veteran Energy (VBB). These are the  
4        Texas-based companies that I collectively refer to as the TXU LSEs.

5        **Q.     Please describe the business operations of the TXU LSEs.**

6        A.     Each of the companies that I collectively refer to as the TXU LSEs is engaged in  
7        being a REP in Texas. These Texas-based companies procure electricity and  
8        ancillary services at wholesale and sell to end-use consumers who have entered into  
9        an agreement to buy such retail electricity from one of the TXU LSEs. None of the  
10       companies that I collectively refer to as the TXU LSEs owns or operates a power  
11       plant, nor do they produce electricity or ancillary services for purposes of selling  
12       into the ERCOT wholesale power markets. Rather, these companies exist for the  
13       purpose of selling to retail (end-user) consumers.

14       **Luminant Energy**

15       **Q.     Please describe Luminant Energy.**

16       A.     Luminant Energy is a subsidiary of Vistra Corp. that exists to buy and sell power  
17       at wholesale, principally in the ERCOT wholesale power market. Luminant Energy  
18       is a qualified scheduling entity (QSE) in ERCOT, which means it is authorized by  
19       ERCOT to interact operationally and financially with ERCOT. Luminant Energy  
20       buys power from power generation companies like Luminant Generation Company  
21       LLC and other owners of generation plants, and sells that power into the ERCOT  
22       markets. It also sells power bilaterally to other wholesale power market participants  
23       and to load-serving entities—REPs, electric cooperatives, and municipally owned

1 utilities—who then sell the electricity to their retail customers. As a QSE, Luminant  
2 Energy serves as the sole entity that engages in financial settlements with ERCOT  
3 on behalf of the TXU LSEs and other load-serving entities who have contracted  
4 with Luminant Energy to serve as their QSE. These entities all commonly engage  
5 a QSE like Luminant Energy to interact with ERCOT on their behalf because the  
6 Protocols mandate that only a QSE can financially settle with ERCOT and only a  
7 QSE can send and receive certain operational communications to and from  
8 ERCOT. Thus, unless a load-serving entity expends the money and effort to itself  
9 be qualified as a QSE, it must contract with an entity that has the technical,  
10 financial, and operational resources to be a QSE to serve as its financial and  
11 operational intermediary to ERCOT. Luminant Energy does not own and control  
12 any of the load-serving entities for whom it serves as QSE. Rather, as a QSE,  
13 Luminant Energy serves as an ERCOT-required financial conduit through which  
14 each of the represented load-serving entities’ obligations and benefits flow.

15 **B. Description of the TXU LSEs’ Interest**

16 **Q. Please describe the interest in this proceeding of the TXU LSEs.**

17 A. As I discussed earlier in my testimony, Section 39.653(b)(3) requires that the  
18 financing order that will be issued in this proceeding “provide the process for  
19 remitting the proceeds of the financing to load-serving entities who were exposed  
20 to the costs included in the uplift balance, including a requirement for the load-  
21 serving entities to submit documentation of their exposure.” As load-serving  
22 entities, each of the TXU LSEs is an entity that the Legislature expressly designated  
23 as a potential recipient of the proceeds from bonds that will be issued per the

1 authority of the financing order. The TXU LSEs each have a direct financial interest  
2 in the outcome of this proceeding. Moreover, because the TXU LSEs exist to serve  
3 customers, each TXU LSE has a direct interest in seeking to promote an outcome  
4 that treats customers fairly and does not discriminate against one set of customers  
5 to the benefit of another set of customers. Thus, the TXU LSEs seek an outcome  
6 that will protect all customers' interests.

7 **C. Description of Luminant Energy's Interest**

8 **Q. Please describe the interest in this proceeding of Luminant Energy.**

9 A. As I mentioned earlier in my testimony, the Protocols mandate that ERCOT interact  
10 financially only with QSEs. Therefore, in its Application and accompanying  
11 testimony, ERCOT has proposed that bond proceeds be funneled to load-serving  
12 entities through the QSEs that represent the load-serving entities. Further, ERCOT  
13 has proposed that uplift charges, which will be used to repay the bonds, be collected  
14 via charges that ERCOT will assess on QSEs, who will pass those charges through  
15 to load-serving entities. Luminant Energy, as a QSE representing load-serving  
16 entities, will thus be financially responsible for receiving and disbursing bond  
17 proceeds as well as collecting and paying uplift charges to ERCOT. Luminant  
18 Energy thus has a direct financial interest in the outcome of this proceeding.  
19 Moreover, like the TXU LSEs, Luminant Energy supports outcomes that protect  
20 the interests of all customers served by the LSEs that it represents.

1           **IV.     ISSUES THAT SHOULD BE DECIDED IN THIS PROCEEDING**

2   **Q.     Are there particular issues that should be decided by the Commission in this**  
3           **proceeding?**

4   **A.**    Yes. I have identified six issues that I believe should be decided in this proceeding.  
5           This is not an exhaustive list of issues that should be decided in this proceeding.  
6           Rather, my list is accretive or complementary to the list of issues included in  
7           ERCOT's application and proposed debt obligation order. Thus, I do not identify  
8           these issues to the exclusion of the issues identified by ERCOT, but instead as a  
9           supplement to ERCOT's identified issues. My list of issues includes:

10                 1.     Rescission of opt-out decisions if the justification for opting out  
11                 ceases to exist;

12                 2.     The process by which load-serving entities will demonstrate their  
13                 exposure to uplift balance costs;

14                 3.     The documentation required to demonstrate exposure to Uplift  
15                 Balance costs;

16                 4.     Whether any "netting" approach will be used to determine a load-  
17                 serving entity's exposure to uplift balance costs, and if so how "netting" will be  
18                 used to determine a load-serving entity's uplift charge responsibilities;

19                 5.     How to prorate and allocate bond proceeds among load-serving  
20                 entities if total uplift balance costs exceed \$2.1 billion; and

21                 6.     Requirements for opting out by transmission-level customers.

1    **A.    Rescission of Opt-Out Decisions if the Justification for Opting Out Ceases to**  
2           **Exist**

3    **Q.    Please describe your issue concerning rescission of opt-out decisions, and how**  
4           **and why the Commission should address it in this proceeding.**

5    A.    As ERCOT acknowledges in its application, the statute provides some entities with  
6           the right to opt out of receiving any bond proceeds and to concomitantly opt out of  
7           bearing any liability for payment of the uplift charges that ERCOT will impose to  
8           raise money to pay off the bonds. Section 39.653(d) describes the entities eligible  
9           to opt out: “The commission shall develop a one-time process that allows  
10          municipally owned utilities, electric cooperatives, river authorities, a retail electric  
11          provider that has the same corporate parent as each of the provider’s customers, a  
12          retail electric provider that is an affiliate of each of the provider’s customers, and  
13          transmission-voltage customers served by a retail electric provider to opt out of the  
14          uplift charges by paying in full all invoices owed for usage during the period of  
15          emergency. Load-serving entities and transmission-voltage customers that opt out  
16          under this subsection shall not receive any proceeds from the uplift financing.”  
17          Notably, that provision lists only two categories of competitive REPs who can opt  
18          out: REPs who have the same corporate parent as all the REP’s customers, and  
19          REPs who are an affiliate of each of the REP’s customers. Such competitive REPs  
20          can opt out and thus will not be charged any uplift charges going forward. By  
21          avoiding those uplift charges, those REPs will have a lower cost of operation than  
22          other REPs who have to pay the uplift charges. Thus, the opt-out REPs ought not  
23          be allowed to compete against other REPs who serve non-affiliated or non-

1 commonly-owned customers, since the opt-out REPs would have an inherent  
2 competitive advantage. To avoid that outcome, the Commission should decide, in  
3 this proceeding, that a REP that opts out under Section 39.653(d) cannot  
4 subsequently change its business model and begin serving non-affiliated or non-  
5 commonly-owned customers unless the REP thereafter becomes liable for payment  
6 of uplift charges. Any other result would create an unfair competitive advantage for  
7 the opt-out REP. And it is important that this issue be addressed now, in this  
8 proceeding, so that REPs that are eligible to take advantage of this particular opt-  
9 out right do not concoct a business plan to opt out now and subsequently change  
10 their business model to take advantage of a competitive advantage that would exist  
11 if their opt-out is not subject to rescission if they begin serving non-affiliated or  
12 non-commonly-owned customers.

13 **B. The Process by which Load-Serving Entities Will Demonstrate Their**  
14 **Exposure to Uplift Costs**

15 **Q. Please describe your issue concerning the process by which load-serving**  
16 **entities will demonstrate their exposure to uplift costs, and how and why the**  
17 **Commission should address it in this proceeding.**

18 A. Section 39.653(b)(3) mandates that the financing order to be issued in this  
19 proceeding “provide the process for remitting the proceeds of the financing to load-  
20 serving entities who were exposed to the costs included in the uplift balance,  
21 including a requirement for the load-serving entities to submit documentation of  
22 their exposure.” Thus, by this language the Legislature required the Commission to  
23 determine, as part of issuing the financing order, the process by which load-serving

1 entities will demonstrate, by submitting documentation of, their exposure to uplift  
2 costs. In order to allow for timely issuance of the bonds and timely remittance of  
3 the bond proceeds “to load-serving entities who were exposed to the costs included  
4 in the uplift balance,” the Commission must define the process by which that  
5 demonstration via documentation is to occur. The TXU LSEs’ witness Mathew  
6 Parker describes in his testimony how the relevant calculations of exposure should  
7 be accomplished. I recommend the Commission adopt Mr. Parker’s  
8 recommendation.

9 All that would then be left is for the Commission to determine how the load-  
10 serving entities are to submit such documentation and what verification is required.  
11 The most efficient process would be for the Commission to establish a compliance  
12 docket into which each load-serving entity submits its documentation of the  
13 calculations described by Mr. Parker. Commission Staff has already opened Docket  
14 No. 52364 for this very purpose. All load-serving entities should be permitted to  
15 intervene in that compliance docket for the purposes of making their filing. An ALJ,  
16 with the benefit of intervenors’ review and input, can determine whether each load-  
17 serving entity’s documentation satisfies the requirements for demonstrating uplift  
18 exposure, as those requirements are established by the Commission in this  
19 proceeding. Then, upon determination by the ALJ and the Commission, after  
20 review of the ALJ’s Proposal for Decision, the Commission can issue a final order  
21 approving exposures for each load-serving entity and ERCOT can proceed to issue  
22 bonds and remit bond proceeds in accordance with each load-serving entity’s  
23 Commission-approved exposure. The Commission should adopt such a process as

1 a component of the order issued in this proceeding, so that each load-serving entity  
2 knows what process and what substantive criteria will be used to determine the  
3 monetary value that will be remitted to it after bonds are issued.

4 **C. The Documentation Required to Demonstrate Exposure to Uplift Costs**

5 **Q. Please describe your issue concerning the documentation required to**  
6 **demonstrate exposure to uplift costs, and how and why the Commission should**  
7 **address it in this proceeding.**

8 A. Section 39.653(b)(3) mandates that the financing order to be issued in this  
9 proceeding “provide the process for remitting the proceeds of the financing to load-  
10 serving entities who were exposed to the costs included in the uplift balance,  
11 including a requirement for the load-serving entities to submit documentation of  
12 their exposure.” Thus, in the last phrase of that subpart, the Legislature required the  
13 Commission to determine, as part of issuing the financing order, the “requirement  
14 for the load-serving entities to submit documentation of their exposure” to costs  
15 that are included in the uplift balance. The practical application of that requirement  
16 is that the Commission must decide what documentation will be sufficient to show  
17 a load-serving entity’s exposure to costs included in the uplift balance. The  
18 Commission must establish that requirement in this proceeding, first, because the  
19 statute requires it and, second, because only by determining that requirement for  
20 documentation will the Commission enable load-serving entities to quantify their  
21 exposure and prepare the documentation for timely submittal to support timely  
22 issuance of the bonds.

1           Mr. Parker describes in his direct testimony the actual documentation and  
2           calculations required for each load-serving entity to document its exposure to the  
3           Uplift Balance costs. As explained by Mr. Parker, the documentation and  
4           calculations rely on data received from ERCOT and thus each load-serving entity  
5           can stand on equal footing with respect to using solely ERCOT-provided data to  
6           determine the relevant exposure. I agree with Mr. Parker's recommended approach  
7           and I recommend that the Commission adopt it. It is accurate, non-discriminatory,  
8           consistent with the statute, and capable of implementation by each load-serving  
9           entity. Accordingly, each load-serving entity can complete the calculations and  
10          prepare the documentation for submission to the Commission, using the process I  
11          described earlier in my testimony.

12           Importantly, the necessary information does not include contracts entered  
13          into by any load-serving entity or any QSE. The statute specifies that the relevant  
14          Uplift Balance costs are those "uplifted to load-serving entities on a load-ratio share  
15          basis due to energy consumption during the period of emergency." The statute does  
16          not require, nor allow, any consideration of contracts that might have allocated cost  
17          liability among entities, such as between a load-serving entity and its QSE. Rather,  
18          it specifies a straightforward process, consistent with the 90-day expedited timeline  
19          for the proceeding: determine each load-serving entity's uplifted costs on a load-  
20          ratio share basis.

21           This simple load-ratio share approach is important because red herrings  
22          have been raised about examining hedges or "offsets" or other considerations other  
23          than a straightforward examination of costs in the Uplift Balance that were uplifted

1 to load-serving entities on a load-ratio share basis due to energy consumption  
2 during the period of emergency. Any such hedges or “offsets”—whether physical  
3 or financial—are irrelevant because they do not factor into the one calculation that  
4 matters: the load-serving entity’s load-ratio share as the basis for determining  
5 exposure. The Commission is directed to remit proceeds based upon the uplifted  
6 costs as they were, in fact, uplifted during the period of emergency, without trying  
7 to delve into the financial arrangements of every load-serving entity. Thus,  
8 transactions such as contracts between a QSE and a load-serving entity, a QSE’s  
9 “self-arrangement” of ancillary services, and other physical or financial hedges are  
10 not relevant, because they do not factor into calculating a load-serving entity’s load-  
11 ratio share exposure to the Uplift Balance costs.

12 The point of the Commission’s exercise here is not to “unscramble the egg.”  
13 Instead, the point is to apply the straightforward determination of what Uplift  
14 Balance costs were uplifted to each load-serving entity on a load-ratio share basis  
15 due to energy consumption during the period of emergency. That determination  
16 may be made using the ERCOT data as described in Mr. Parker’s testimony.

1     **D.     Whether Any “Netting” Approach Will be Used to Determine a Load-Serving**  
2     **Entity’s Exposure to Uplift Costs**

3     **Q.     Please describe your issue concerning the determination of whether any**  
4     **“netting” approach will be used to determine a load-serving entity’s exposure**  
5     **to uplift costs, and how and why the Commission should address it in this**  
6     **proceeding.**

7     A.     Section 39.653(b)(3) mandates that the financing order to be issued in this  
8     proceeding “provide the process for remitting the proceeds of the financing to load-  
9     serving entities who were exposed to the costs included in the uplift balance,  
10    including a requirement for the load-serving entities to submit documentation of  
11    their exposure.” In order to accomplish the Legislature’s directive, the Commission  
12    must implement two principal steps. First, it must determine who was exposed to  
13    the uplift balance costs. Second, it must determine what documentation is required  
14    to demonstrate that exposure. The question of “netting” impacts both steps. With  
15    regard to the first step, the decision of whether to implement netting could eliminate  
16    some load-serving entities from the pool of entities who are considered exposed.  
17    “Netting” might lead to a load-serving entity’s uplift balance costs being  
18    completely offset by some other hypothetically relevant revenue. Thus, whether to  
19    “net” will affect step one.

20             In fact, under one hypothetical approach to “netting” between affiliates, it  
21    is conceivable that Uplift Balance costs uplifted to the TXU LSEs during the period  
22    of emergency would be entirely “offset” by revenues received by power marketing  
23    or power generation company affiliates of the TXU LSEs. Thus, it is certainly

1 conceivable that determination of the “netting” issue could eliminate one or more  
2 load-serving entities from the pool of load-serving entities eligible to receive bond  
3 proceeds. It also raises questions about how such netting would be allocated across  
4 multiple affiliated load-serving entities if their exposure is not deemed to have been  
5 completely offset by the other affiliate revenues. To be clear, the TXU LSEs  
6 adamantly oppose any such “netting” for all the reasons outlined in my testimony.  
7 But I highlight the impact of the netting question here to ensure that the  
8 Commission understands the importance of deciding the issue now, in this  
9 proceeding.

10           Regarding the second step (determining the documentation required), the  
11 Commission must determine whether “netting” applies before it can prescribe what  
12 documentation each load-serving entity must submit. The documentation that  
13 would be relevant to showing hypothetically offsetting revenues—especially  
14 revenues of an affiliated company separate from the load-serving entity—would be  
15 completely different from the documentation to show the exposure of a load-  
16 serving entity standing alone. Hence, the Commission cannot prescribe the process  
17 for remitting bond proceeds to load-serving entities or the requirements for  
18 submitting documentation unless the Commission also determines whether  
19 “netting” will apply. Therefore, the Commission should decide the “netting” issue  
20 now, in this proceeding. The Commission’s decision should be to reject any  
21 application of netting, for the reasons discussed in my testimony and as contained  
22 in the *TXU Load-Serving Entities’ Brief Regarding “Netting”* filed in this  
23 proceeding on August 4, 2021.

1   **E.    How to Allocate Bond Proceeds Among Load-Serving Entities if Total Uplift**  
2       **Exposure Exceeds the \$2.1 Billion Cap**

3   **Q.    Please describe your issue concerning the allocation of bond proceeds if total**  
4       **exposure to uplift costs exceeds the \$2.1 billion cap, and how and why the**  
5       **Commission should address it in this proceeding.**

6   **A.**    PURA Section 39.652(4) defines the “uplift balance” to be securitized as “an  
7       amount of money of not more than \$2.1 billion that was uplifted to load-serving  
8       entities on a load ratio share basis due to energy consumption during the period of  
9       emergency for reliability deployment price adder charges and ancillary services  
10      costs in excess of the commission’s system-wide offer cap[.]” Thus, that provision  
11      establishes a cap of \$2.1 billion on the uplift balance that can be securitized. It is  
12      certainly conceivable that the total exposure to uplift balance costs of all exposed  
13      load-serving entities exceeds \$2.1 billion; however, the existence of the statutory  
14      cap means that under no circumstances will bond proceeds exceed \$2.1 billion. In  
15      that event, the Commission will need to prorate and allocate the bond proceeds  
16      among the exposed load-serving entities. The Commission should make the  
17      decision regarding any such allocation now, so that a separate, lengthy proceeding  
18      is not required to address it later if the total exposure of all load-serving entities  
19      exceeds \$2.1 billion.

20           The statute does not expressly direct how the Commission should  
21      accomplish that allocation, but it is highly instructive that both the statutory  
22      definition of “Uplift Balance” (Section 39.652(4)) and the statutory instruction  
23      directing ERCOT how to allocate the uplift charges that will be used to repay the

1 bonds (Section 39.653(c)) use the phrase “to load-serving entities on a load ratio  
2 share basis.” Section 39.652(4) defines the “uplift balance” as “an amount of money  
3 of not more than \$2.1 billion *that was uplifted to load-serving entities on a load*  
4 *ratio share basis* due to energy consumption during the period of emergency[.]”  
5 Similarly, regarding imposition of uplift charges, Section 39.653(c) directs that the  
6 “independent organization shall *assess uplift charges to all load-serving entities on*  
7 *a load ratio share basis*[.]” In each case, the relevant costs are those borne by “load-  
8 serving entities on a load ratio share basis.” Consequently, the Commission would  
9 be acting consistent with the other allocation provision in Subchapter N by  
10 allocating bond proceeds on a load-ratio share basis to eligible load-serving entities  
11 if the total exposure exceeds \$2.1 billion. To the extent that certain uplift costs were  
12 accrued at different points in time, the methodology proposed in Mr. Parker’s  
13 testimony would allow that cost-weighted load-ratio share exposure to the uplift  
14 costs to be easily determined, and the \$2.1 billion could be allocated on a pro rata  
15 basis from the total documented exposure. That approach would have the extra  
16 benefit of not only maintaining consistency within Subchapter N, but also treating  
17 affected retail customers in an equitable and non-discriminatory manner by  
18 applying a uniform reduction across all affected customers on the basis of load-  
19 ratio share for each settlement interval in the Period of Emergency.

20 I also recommend that the Commission use a sequential approach to allocate  
21 bond proceeds: first, to cover each load-serving entity’s exposure to the RDPA  
22 uplift costs; second, to then allocate the remainder of the bond proceeds up to the  
23 \$2.1 billion cap to cover, on a pro rata basis, each load-serving entity’s exposure to

1 ancillary services costs above \$9,000 per megawatt hour. While I do not  
2 recommend that the Commission require consideration of hedges or a QSE's self-  
3 arranged ancillary service quantities not contemplated by the statute for allocation  
4 of the proceeds, if that decision is made, then this sequential allocation approach  
5 would provide a balanced option for prioritizing distribution of proceeds related to  
6 RDPA uplift costs that were unambiguously assigned on a load-ratio share basis.  
7 Moreover, RDPA uplift charges were a completely non-hedgeable cost for every  
8 load-serving entity, and so it is fair that the bond proceeds would cover those costs  
9 first.

10 **F. Requirements for Opting Out by Transmission-Level Customers**

11 **Q. Please describe your issue concerning the requirements for opting-out by**  
12 **transmission-level customers, and how and why the Commission should**  
13 **address it in this proceeding.**

14 **A.** As I described earlier in my testimony, the statute provides certain entities the right  
15 to opt out of paying uplift charges in exchange for having paid their full uplift  
16 charge obligations and declining to receive any bond proceeds. Section 39.653(d)  
17 describes the entities eligible to opt out: "The commission shall develop a one-time  
18 process that allows municipally owned utilities, electric cooperatives, river  
19 authorities, a retail electric provider that has the same corporate parent as each of  
20 the provider's customers, a retail electric provider that is an affiliate of each of the  
21 provider's customers, and transmission-voltage customers served by a retail electric  
22 provider to opt out of the uplift charges by paying in full all invoices owed for usage  
23 during the period of emergency. Load-serving entities and transmission-voltage

1 customers that opt out under this subsection shall not receive any proceeds from  
2 the uplift financing.” The Commission should establish in this proceeding the  
3 requirements for opting out by transmission-voltage customers so that REPs will  
4 know which customers are eligible to opt out and can communicate that eligibility  
5 consistently to customers, and so that the Commission implements the opt-out  
6 provision consistent with the statute. To accomplish that, the Commission should  
7 require that, to opt-out, a transmission-voltage customer make an affirmative choice  
8 to do so and that the customer inform its REP of its choice. If the Commission were  
9 to take the opposite approach, and assume that transmission-voltage customers are  
10 opting out unless they affirmatively negate that assumption, the Commission would  
11 be turning the opt-out right into an opt-in right. That would not be consistent with  
12 the statute.

13 Additionally, the Commission should require that, to be eligible to opt out,  
14 a transmission-voltage customer must have: (1) been liable for uplift costs; and (2)  
15 have paid in full its invoices for usage during the Period of Emergency. These  
16 requirements flow from the statute, so they should be established to effectuate the  
17 statutory language. There is a natural symmetry in Section 39.653(d) that the phrase  
18 “transmission-voltage customers that opt out under this subsection shall not receive  
19 any proceeds from the uplift financing” means that opt-out transmission-voltage  
20 customers must have had contractual exposure to the uplift costs contemplated in  
21 Section 39.660. And Section 39.653(d) has plain language that a prerequisite to an  
22 eligible entity’s opt-out is “paying in full all invoices owed for usage during the

1           period of emergency.” In the context of a REP’s transmission-voltage customer, the  
2           only invoice related to the period of emergency would be the invoice from the REP.

3       **V.       ANY IMPLEMENTATION OF “NETTING” WOULD CONTRAVENE**  
4               **THE PERTINENT STATUTES AND WOULD BE IMPROPER**  
5               **PUBLIC POLICY**

**Q. Would netting at the corporate level result in an outcome that appropriately accounts for a load-serving entity's hedges?**

A. No. First, as I mentioned earlier in my testimony, no load-serving entity could hedge against the RDPA charges created by the former Commissioners' decision to set prices at \$9,000 per megawatt hour even during hours in which there were sufficient reserves to maintain reliability. The RDPA is paid to the generators who were dispatched to serve load as a component of the energy price and to generators who were available to be dispatched, but whose energy was not needed in the moment, through uplift charges. The purpose of the uplift component is to make generators indifferent as to whether they are providing energy or reserves in real-time, because each provides a similar theoretical value. However, netting at the corporate level would not only give a preference to those load-serving entities who do not have generation affiliates (or whose affiliates did not perform during Winter Storm Uri), but would also give a preference to those load-serving entities who have generation affiliates that were providing energy rather than reserves, relative

1 to load-serving entities who have generation affiliates that were providing reserves  
2 rather than energy, since the former would have been recipients of the RDPA  
3 through the energy price rather than the uplift charges. Such an outcome would be  
4 illogical and unfair, and would frustrate the purpose to the RDPA uplift altogether.

5 Second, there are multiple ways for a load-serving entity to hedge its  
6 exposure to ancillary service charges, so to the extent that the Commission decides  
7 that netting is necessary to determine a load-serving entity's exposure to those  
8 charges, it should consider all hedges – financial and physical, bilateral and self-  
9 scheduled – for every load-serving entity, rather than assuming that load-serving  
10 entities with generator affiliates have been hedged by their affiliates' units.

**VII. IF NETTING APPLIES TO DETERMINE ELIGIBILITY FOR BOND PROCEEDS, THEN IT MUST ALSO APPLY TO DETERMINE THE EXTENT OF LIABILITY FOR PAYMENT OF UPLIFT CHARGES**

**Q. Are there implications for imposition of liability for payment of uplift charges if the Commission adopts netting?**

**A.** Yes. If netting is used to determine eligibility for receiving bond proceeds, then that same rationale must be applied to ensure that any liability for payment of uplift charges is commensurate with the amount of bond proceeds received.

**Q. Does ERCOT have the information needed to assess uplift charges on a load-ratio share basis and to determine load-serving entities' exposure to uplift balance costs on a load-ratio basis?**

A. Yes, ERCOT has all the information it needs to determine both things: each load-serving entity's load-ratio share of uplift balances and the allocation of uplift charges, because the methodology for determining each is fundamentally the same. The statute specifies that the relevant Uplift Balance exposure is to costs that were uplifted "to load-serving entities on a load-ratio share basis." ERCOT already possesses load information for the load served by each load-serving entity. And ERCOT already possesses financial information regarding the uplifted costs that make up the Uplift Balance defined in Section 39.652(4). All that is left to do is follow the statute and determine each load-serving entity's share of those costs

**VIII. CONCLUSION**

- Q. Will you summarize your recommendations?**
- A. Yes. I recommend that the Commission:
- reject all requests to implement “netting” when determining load-serving entities’ statutory rights to receive bond proceeds under Subchapter N;
  - adopt Mr. Parker’s recommended calculation methodology for determining each load-serving entity’s exposure to Uplift Balance costs;

- 1           • require each load-serving entity that seeks bonds proceeds to submit  
2           documentation to show its exposure to Uplift Balance costs in accordance with  
3           Mr. Parker's recommended calculation, using the process I outline in Part IV.B  
4           of my testimony;
- 5           • prorate and allocate bond proceeds, if load-serving entities' aggregate exposure  
6           to Uplift Balance costs exceeds the \$2.1 billion statutory cap, using the  
7           sequential process I outline in Part IV.E of my testimony, first allocating  
8           proceeds to cover RDPA costs and then allocating the remainder on a pro rata  
9           basis to cover ancillary services costs above the system-wide offer cap;
- 10          • determine that, if netting applies to the determination of exposure to Uplift  
11          Balance costs, then netting must also apply to the determination of liability, if  
12          any, for payment of uplift charges;
- 13          • order that a REP's opt-out decision is revoked if the conditions that justify the  
14          opt-out cease to be true; and
- 15          • establish requirements for opt-out by transmission-voltage customers that  
16          ensure full payment of all invoices for services during the Period of Emergency.

17   **Q. Does that conclude your direct testimony in this proceeding?**

18   A. Yes.

## AFFIDAVIT

STATE OF TEXAS       §  
                                  §  
COUNTY OF TRAVIS   §

AMANDA J. FRAZIER, first being sworn on her oath, states:

I am the witness identified in the preceding testimony. I have read the testimony and the accompanying exhibit(s) and am familiar with the contents. Based upon my personal knowledge, the facts stated in the testimony are true. In addition, in my judgment and based upon my professional experience, the opinions and conclusions stated in the testimony are true, valid, and accurate.

  
AMANDA J. FRAZIER

Subscribed and sworn to before me this 12<sup>th</sup> day of August 2021 by Amanda J. Frazier.

  
Notary Public, State of Texas

My Commission Expires: 12-01-2024

## **AMANDA J. FRAZIER**

### **PROFESSIONAL EXPERIENCE**

#### **VISTRA | OCTOBER 2016 – PRESENT**

##### **Senior Vice President, Regulatory Policy**

- Lead team of professionals in market design advocacy for the CAISO, ERCOT, ISO-NE, MISO, NYISO and PJM markets.
- Direct and promote Vistra's interests before the Federal Energy Regulatory Commission, the Public Utility Commission of Texas, and other state commissions related to generation issues and wholesale and retail competition.

#### **ENERGY FUTURE HOLDINGS | MAY 2012 – OCTOBER 2016**

##### **Senior Director, Regulatory Policy**

- Collaborated with regulatory policy team to prepare rulemaking comments, position papers, revision requests, and recommendations on various regulatory issues, including resource adequacy, generation costs and pricing, transmission planning, and ERCOT credit requirements.
- Directed team of regulatory policy professionals in partnership with commercial teams to drive policy and content improvements in ERCOT Protocols and Operating Guides.
- Participated as EFH's voting member on the ERCOT Technical Advisory Committee and other subcommittees and task forces.
- Partnered with legislative team to develop and advocate substantive positions on bills.

#### **LUMINANT | OCTOBER 2010 – MAY 2012**

##### **Senior Manager, Legislative and Regulatory Affairs**

- Represented Luminant related to activities pending at the PUC, and prepared formal and informal communications regarding Luminant's positions, including those on resource adequacy and generator emergency operations.
- Reviewed and prepared analysis for every bill filed during the Texas Legislative sessions that impacted Luminant's business.
- Managed Luminant's regulatory strategies in partnership with commercial teams to drive policy and content improvements in ERCOT Protocols and Operating Guides.
- Participated as the company's voting member on the ERCOT Wholesale Market Subcommittee and other subcommittees and task forces.

#### **BRACEWELL & GIULIANI LLP | December 2007 – October 2010**

##### **Energy Regulatory Associate**

- Represented major integrated electric utility in rate design aspects of rate case.
- Represented seller in PUC review of the merger and disposition of west Texas electric utility.
- Represented power generation company in appeal of ERCOT Protocols Revision Request.
- Represented natural gas trading company in investigation by the U.S. Federal Energy Regulatory Commission (FERC) of alleged violations of the Natural Gas Act.

- Advised electric generator regarding North American Electric Reliability Corporation (NERC) registry requirements and its compliance obligations to the Texas Reliability Entity.
- Represented various entities in preparing self-reports, self-certifications, and audit worksheets for NERC compliance in the Western Electricity Coordinating Council, Northeast Power Coordinating Council, and ReliabilityFirst regions.
- Represented foreign generator and power marketer in defense of federal and FERC litigation related to the California energy crisis.
- Counseled various clients regarding application of Texas energy regulations involved in asset transactions.

#### **HUNTON & WILLIAMS LLP | September 2001 – November 2007**

##### **Regulated Industries and Governmental Relations Associate (January 2004 – November 2007).**

- Defended (as lead associate) largest PUC enforcement action related to allegation of market power abuse by a power generation company.
- Developed and successfully prosecuted the first of its kind voluntary market power mitigation plan for wholesale power trading company in Texas.
- Represented major Texas power generation company and wholesale power trading company in rulemakings and policy advocacy before the PUC regarding wholesale electricity market design and market power mitigation.
- Represented (as lead associate) the electric transmission and distribution utility in the merger review by the PUC of the \$45 billion leveraged buyout of the TXU companies.
- Represented wholesale power trading company in matters regarding market-based rates before the FERC.
- Counseled various clients regarding application of Texas energy regulations involved in asset transactions.
- Authored (as lead associate) Petition for Review to the Texas Supreme Court of TXU Generation Co. v. Public Util. Comm'n, 165 S.W.3d 821 (Tex. App. – Austin 2005).
- Prepared closing documents for multi-million dollar sale of client's oil and gas leases and producing wells and natural gas gathering and transportation pipelines in east Texas and Louisiana.
- Represented and counseled major Texas electric transmission and distribution utility in various administrative litigation proceedings.
- Represented gas distribution utility in natural gas rate case.
- Prepared materials and provided legal counsel regarding license materials for the U.S. Department of Energy in connection with its license application to the U.S. Nuclear Regulatory Commission for the Yucca Mountain Project (a geologic nuclear waste repository).

##### **Litigation Associate (September 2001 – January 2004).**

- Executed discovery and motion practice, took and defended depositions for a variety of commercial contract and tort disputes, mediations and arbitrations.
- Participated in oral argument in state and federal court on pre-trial motions.
- Represented various clients on multiple claims, including ERISA, wholesale natural gas contract disputes, electrical contact injuries, natural gas pipeline contract disputes.

## **EDUCATION & LICENSES**

### **VANDERBILT UNIVERSITY SCHOOL OF LAW | May 2001**

#### **Doctor of Jurisprudence**

##### Honors and Activities:

- Phi Delta Phi Academic Fraternity
- Research Assistant, Professors Barry Friedman, Rebecca Brown, Lisa Bressman

### **BAYLOR UNIVERSITY | May 1998**

#### **Bachelor of Arts, Summa Cum Laude**

##### Honors and Activities:

- Phi Beta Kappa Academic Fraternity
- Alpha Chi Academic Fraternity
- Golden Key National Honor Society
- Baylor Presidential Scholar
- Study Abroad, Maastricht, Netherlands (Spring 1997)

Member of the Bar, State of Texas, admitted 2001. Admitted to practice in the U.S. District Court for the Northern and Eastern Districts of Texas.
