Docket # 52455

June 3, 2022

PUC,

This information is concerning docket number 52455. My name is Anne Weary. I own and live on my property at 1542 L.R. Campbell Rd., Italy Texas 76451. This is my Testimonial requested concerning the route of the transmission line.

The original route proposed made more sense to me because it went along the existing road. It did not go through environmentally sensitive and rare forestland, prairie land, sensitive creeks and waterways. This original route did not go through my property and destroy my rare prairie, forest, sensitive creeks and homestead. I supported this route.

Then I was disappointed when oncor told me the original route was not under consideration. I was told I had to make a choice between 2 routes/lines that went through my property. Of the 2 choices, the 152 route - DDD line was less destructive to my environmentally sensitive property and homestead. I agreed to settle on the 152 route which passes through the corner of my property.

Prior to the announcement of the power lines, I had been working with David Bezanson from the Texas Nature Conservancy to put a conservation easement on my property to protect my rare forest, prairie and wild life from development. Rare plants and trees on my property have been documented by the Texas Nature Conservancy.

My Testimonial is my first choice was the original route that did not go through my environmentally sensitive property with rare prairie and old growth forestland. I agreed to settle on route/line 152 DDD that was less damaging to my property of the 2 choices I was offered. I have enclosed documentation from the Texas Nature Conservancy concerning importance of preserving my property.

Thank you, Anne Weary
