#### 12.24.3 PURPOSE

[REDACTED]

#### 12.24.4 DEFINITIONS

[REDACTED]

**Coronavirus** – Coronaviruses (CoV) are a large family of viruses that cause illness ranging from the common cold to more severe diseases such as Middle East Respiratory Syndrome (MERS-CoV) and Severe Acute Respiratory Syndrome (SARS-CoV).

**COVID-19** – The latest Coronaviruses (CoV), COVID-19 is the infectious disease caused by the most recently discovered coronavirus. This new virus and disease were unknown before the outbreak began in Wuhan, China, in December 2019.

[REDACTED]

**H1N1 (Swine Flu)** – H1N1 (referred to as “swine flu” early on) is a new influenza virus causing illness in people. This new virus was first detected in people in the United States in April 2009. Other countries, including Mexico and Canada, have reported people sick with this new virus. This virus is spreading from person-to-person, probably in much the same way that regular seasonal influenza viruses spread. Up to date more than 30,000 people has been infected around the world. For more information on this virus (<http://www.cdc.gov/h1n1flu/qa.htm>)

**H5N1** – The latest avian influenza virus subtype of concern and there appears to be little human immunity to it. The predominant winter strain of human influenza is H3N2. Most adults have some partial immunity to this strain, which caused a pandemic in 1968 when it evolved from avian influenza.

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

**Pandemic** – an outbreak of a disease that occurs over a wide geographic area and affects an exceptionally high proportion of the population

[REDACTED]

**Quarantine** – is when people who have been in close proximity to an infected person, but appear healthy, are asked to remain in one place, away from the general public, until it can be determined that they have not been infected.

[REDACTED]

[REDACTED]

[REDACTED]

**WHO** – World Health Organization. Working with 194 Member States, across six regions, and from more than 150 offices, the World Health Organization’s primary role is to direct and coordinate international health within the United Nations system.

## 12.24.8.2 Pandemic Alert Phases

The World Health Organization (WHO) tracks health concerns around the world and has established Pandemic Alert Phases. As depicted in the table below, each phase describes the stages of a pandemic from its inception. These phases can be used in the planning process as a means of establishing trigger points upon which response activities can occur. Table 1 below illustrates the WHO Pandemic Alert Phases.

WHO Pandemic Alert Phases	
Inter–Pandemic Period	
1	No new influenza virus subtypes have been detected in humans. An influenza virus subtype that has caused a human infection may be present in animals. If present in animals, the risk of human disease is considered to be low.
2	No new influenza virus subtypes have been detected in humans. However, a circulating animal influenza subtype poses a substantial risk of human disease.
Pandemic Alert Period	
3	Human infections(s) with a new subtype, but no human-to-human spread, or at most rare instances of spread to a close contact.
4	Small cluster(s) with limited human-to-human transmission but spread is highly localized, suggesting that the virus is not well adapted to humans.
5	Large cluster(s) but human-to-human spread still localized, suggesting that the virus is becoming increasingly better adapted to humans, but may not yet be fully transmissible (substantial pandemic risk).
Pandemic Period	
6	Pandemic phase: increased and sustained transmission in general population.

Table 1  
(United States Department of Health & Human Services Pandemic Influenza Plan, Appendix C: WHO Pandemic Phases)

To keep apprised on the World Health Organization's current pandemic alert phase, visit <https://www.cdc.gov/>. This web site provides a wide array of educational pandemic information.

**12.24.8.16 Pandemic Response Activity Checklists**

As the pandemic threat progresses through the World Health Organization's pandemic alert phases, there are response activities for protecting Antelope Elk Energy Center personnel. These actions are triggered by a change in the alert phases.

The following tables serve as guides, and provide activity check lists with the appropriate WHO pandemic alert phases. The Station Management should review these check lists and initiate action items when deemed necessary.

WHO PANDEMIC PHASES 1 & 2	
Antelope Elk Energy Center ACTIVITY CHECK LIST	
The first two WHO pandemic alert phases pose no significant threat to the Antelope Elk Energy Center. It is business as usual and there are no suggested response activities.	

WHO PANDEMIC ALERT PHASE 3	
Antelope Elk Energy Center ACTIVITY CHECK LIST

## 2.0 DEFINITIONS

[REDACTED]

[REDACTED]

**Emergency (PUCT Definition)** – a situation in which the known, potential consequences of a hazard or threat are sufficiently imminent and severe that an entity should take prompt action to prepare for and reduce the impact of harm that may result from the hazard or threat. The term includes an emergency declared by local, state, or federal government, or MRO or another reliability coordinator designated by the North American Electric Reliability Corporation and that is applicable to the entity.

[REDACTED]  
[REDACTED]  
[REDACTED]

**Hazard (PUCT Definition)** – a natural, technological, or human-caused condition that is potentially dangerous or harmful to life, information, operations, the environment, or property, including a condition that is potentially harmful to the continuity of electric service.

### 3.0 PREFACE

This Emergency Action Plan (EAP or Plan) has been designed to establish practices and procedures for the Golden Spread Panhandle Wind Ranch in the event of an emergency and has been developed to address elements in 29 CFR 1910.120(q)(2). This Plan is supported by a set of implementing procedures and additional plans as listed in this section. The elements that are required to be included in the Plan are identified and cross-referenced in **Table 3-1**.
