

FERC Account 396.0 Power Operated Equipment (20% Net Salvage)

This account includes any salvage and removal cost related to backhoe and all-terrain vehicles. The current authorized net salvage rate for this account is positive 20 percent. Most organizations experience positive net salvage for this account but none has been recorded since 1996. Regardless, some salvage is expected and this study recommends retaining 20 percent net salvage for this account.

FERC Account 397.1 Communication Equipment (0% Net Salvage)

This account includes any salvage and removal cost related to miscellaneous communication equipment. The historical indications are that this account will not receive salvage or experience material removal cost. The current authorized net salvage rate for this account is 0 percent and is retained.

FERC Account 398.0 Miscellaneous Equipment (0% Net Salvage)

This account includes any salvage and removal cost related to miscellaneous equipment. The current authorized net salvage rate for this account is 0 percent and is retained.

Account 390.1 is amortized on an item basis over the lease term of each individual asset.

The booking of the general reserve deficiency authorized in Docket 39896 will continue for a 10 year period.
The first entry for the general plant reserve deficiency occurred in 2012.

ENTERGY TEXAS, INC.
PUBLIC UTILITY COMMISSION OF TEXAS
DOCKET NO. 53719

Response of: Entergy Texas, Inc.
to the Third Set of Data Requests
of Requesting Party: Texas Industrial Energy
Consumers

Prepared By: Hunter Leland
Sponsoring Witness: N/A
Beginning Sequence No. LR873
Ending Sequence No. LR875

Question No.: TIEC 3-2

Part No.:

Addendum:

Question:

Referring to the proposed Schedule IS:

- a. Explain the differences between LMRs and LMMs.
- b. How many of ETI' s current Schedule IS customers are LMRs, LMMs, or both LMRs and LMMs?
- c. Under the current Schedule IS, can a customer qualify as an LMM but not be registered as an LMR? Please explain why or why not.
- d. Under the proposed Schedule IS, would LMMs also have to register as LMR? If so, explain the reason for this requirement.
- e. List the criteria that the Company will use to determine whether a failure to comply with a Company-ordered curtailment request was justified.
- f. State the definition of Firm Contract power as specified in VI. B. of the otherwise applicable firm tariff and explain how it is determined.
- g. State the reasons for the proposal that the off-peak provision of Section V of the applicable rate schedule would not apply to the definition of Firm Contract Power for interruptible service and explain how this provision would be consistent with encouraging customers to utilize electricity during off-peak periods.

Response:

- a. LMR – Load Modifying Resources are Demand Resources or Behind the Meter Generators that are registered with Midcontinent Independent System Operator (“MISO”). Demand Resources such as customers on Schedule Interruptible Service (“IS”) are defined as Interruptible Load that result in additional and verifiable reductions in end-use customer demand during an emergency. LMRs are registered as capacity resources in the MISO Planning Resource Auction (“PRA”) that

generate Zonal Resource Credits (“ZRC’s”) in proportion of load that can be reduced. These resources are required to be available for use by MISO during emergency events unless unavailable for reasons outlined in MISO Business Practice Manual (“BPM”) 011. LMRs must qualify and be approved by MISO each planning year.

LMM – Load Modifying Measures are load reduction actions taken by Market Participants (“MP”) during emergencies as requested by MISO. These resources can be in the form of interruptible load such as an ETI IS customer that is not registered as an LMR. LMM are not capacity resources and therefore do not generate ZRC’s for the MP.

- b. Entergy Texas, Inc. (“ETI”) currently has four Schedule IS customers registered as an LMR for the MISO planning year 2022/2023 and three available for curtailment as an LMM. Customers listed as LMRs will not be considered LMMs; therefore, no customers are considered “both.”
- c. Under the current Schedule IS, certain customers are considered LMM’s because they do not meet MISO’s LMR qualification requirements listed in MISO BPM-011 and have been grandfathered into continued participation for Schedule IS when ETI joined MISO in 2013.
- d. LMMs do not register with MISO yearly as required for LMRs. Under the proposed Schedule IS, current customers considered LMMs would be eligible to remain as an LMM until they could qualify as a LMR under MISO qualification rules as laid out in BPM-011.
- e. ETI will rely on hourly meter data to determine if a customer curtailed to its Firm Contract Power and will give the customer an opportunity to provide documentation of the specific circumstances that would justify exemption from penalties, such as stated in the MISO Tariff (section 69A 3.9) and Schedule IS (section IV). ETI has discretion concerning whether the curtailment failure is justified.
- f. Firm Contract Power is defined as the amount of kilowatts that a customer desires to exclude from interruptions. It is determined by the customer how much kilowatts to exclude.
- g. ETI is proposing that the off-peak provision would not apply to firm contract power because ETI never intended the off-peak provision in the LIPS and LIPS – TOD Schedule to be included in the interruptible credit calculation of the IS Schedule. In the past customer have interpreted the interruptible credit calculation to include the off-peak provision, resulting in customers not reducing their demand down to the Firm Contract Power under the IS Schedule when called upon. ETI recognized that the IS Schedule was less than clear on this point, so it honored the customer’s interpretation. Correctly interpreted, the benefit of the off-peak provision that is stated in the IS Schedule is applicable only for billing purposes and is not applicable to determine the firm contract power to which the customer must reduce its load

during interruption periods. During interruption periods, if the customer interprets the off-peak provision to include firm contract power, it could further burden the grid but not reducing to firm contract power during an emergency period and increase risk to existing firm load customers.

The provision as proposed remains consistent with encouraging customers to utilize electricity during off-peak periods because it still allows a customer to use more power during an off-peak period without establishing a new Contract Power for billing purposes.
