Re: PUC Project No. 54335, *Review of Market Reform Assessment Produced by Energy and Environmental Economics (E3)*

Analysis of Different Methods for Identifying Hours of Highest Reliability Risk:
Correction to Previous Data

Dear Chairman and Commissioners:

Regarding the data I provided with my January 5, 2023 letter addressing the different methods for identifying the hours of highest reliability risk, I wanted to notify you of an error that has been brought to my attention. Specifically, in the second spreadsheet tab that provides the 25 highest-risk hours for each season of each year under each method (labeled “Top 100 Seasonal”), my team has determined that, under the “Real Time Margin” method analysis results, one entry from winter 2019 (namely, the value for December 5, 2019, hour ending 11, in row 27, columns AY – BB) should have instead been included in the values for winter 2020, and a new value not previously identified in winter 2019 (specifically, February 28, 2019, hour ending 9) should have been used as the new 25th-highest-risk hour in that season. As noted in my previous letter, the values for each winter season were to include values from December of the previous year through February of the year identified. Because the value for December 5, 2019 was not properly included in the data for winter 2020, the data for each season in 2020 was off by one row in the spreadsheet. This error did not impact the data for any other analysis we conducted.

Attached is an updated spreadsheet showing the corrected 2019 and 2020 seasonal data under the Real Time Margin analysis on the second tab. We have also updated slides 37 and 39 in the slide deck (also attached) to show the value from December 5, 2019 on the heat map for the 2020 seasonal Real Time Margin analysis rather than for the corresponding 2019 analysis, and to include the additional winter 2019 value on the heat map for the 2019 seasonal Real Time Margin analysis. No other changes to the spreadsheet or slide deck have been made.

We regret this error and would be happy to answer any questions you may have.

Sincerely,

/s/ Dan Woodfin

Dan Woodfin
Vice President, System Operations
