Jeffery Scott Brooks owner of property 2560 represented on the map of 3-1A.

07/31/2023

My property is affected by V2 leg of the proposed transmission lines. In the entrance of my property we have built my daughter and son-in-law a home that is not represented by Oncor's map. This home was started in January 2023, prior to us knowing any mapping of any lines. Currently my 200 acres has lost over 25% to easements. I have another very large transmission line that runs North to the South and East to west on my property. All of which of the 55 acres of easements the county, state and school districts tax us on. I feel like we have done more than our share on surface rights contributions to the good will of others. For Oncor to get to the intersection of V2/V1 location, they can use the V4/V3 and V1 leg then the transmission line would affect less property owners. The V1 leg uses the property railroad right-away causing less loss of usable surface. We have scanned the PDF file of the map locating the house that we have built on the front of the property for my daughter and son-in-law, David and Holly Johnsen.

Thank you very much for our consideration.

  
Jeffery Scott Brooks
