Control Number - 55067

Item Number - 68

① Destruction of wildlife habitat listing animals seen like the great blue Heron.
(Swear I've seen some Whooping cranes stop thru too)

② Health impact to our family and children because the powerlines will be closer to our homes than other routes. Routes J8, J4 or I1 are much further away from peoples homes.

③ 550 ft of route J3 powerlines will be parallel and on top of an over 8" pipeline. This can lead induction coupling between the metal pipeline and the magnetic field from the powerlines. This could lead to failure of the pipeline near people's homes. With the powerlines overhead it would also increase the easement required and make it difficult for pipeline maintenance. Other routes such as J2, I1, J4, J8 are much further away from pipelines and wouldn't pose such a risk.
