EXHIBIT

Exhibit SFH-R-1 Letter from Edison Electric Institute dated November 15, 2022

1 **I. INTRODUCTION AND PURPOSE**

2 Q1. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

3 A. My name is Samantha F. Hill. My business address is 639 Loyola Ave.,
4 New Orleans, Louisiana 70113. I am employed by Entergy Services, LLC
5 (“ESL”).¹ My present position is Manager, Regulatory Rate Strategy.

6
7 Q2. ARE YOU THE SAME SAMANTHA F. HILL WHO FILED DIRECT
8 TESTIMONY IN THIS CASE ON BEHALF OF ENTERGY TEXAS, INC.?

9 A. Yes. I am now submitting my Rebuttal Testimony to the Public Utility
10 Commission of Texas (“PUCT” or the “Commission”) on behalf of Entergy
11 Texas, Inc. (“Entergy Texas” “ETI,” or the “Company”) in support of ETI’s
12 proposal to (1) offer to non-residential customers a new Transportation
13 Electrification (“TE”) specific offering called the Transportation Electrification
14 and Charging Infrastructure (“TECI-1”) Rider, and (2) adopt a new option that
15 will be available to a limited number of qualifying non-residential customers
16 called the Transportation Electrification and Charging Demand Adjustment
17 (“TECDA-1”) Rider.

¹ ESL is a subsidiary of Entergy Corporation that provides technical and administrative services to all of the Entergy Operating Companies (“EOCs”). The EOCs include Entergy Arkansas, LLC; Entergy Louisiana, LLC; Entergy Mississippi, LLC; Entergy New Orleans, LLC; and Entergy Texas, Inc.

1 Q3. WHAT IS THE PURPOSE OF YOUR REBUTTAL TESTIMONY?

2 A. The purpose of my Rebuttal Testimony is to address certain arguments related to
3 TECI-1 Rider and TECDA-1 Rider raised in the Direct Testimonies of
4 Commission Staff witness William B. Abbott, Office of Public Utility Counsel
5 (“OPUC”) witness Evan D. Evans, ChargePoint, Inc. (“ChargePoint”) witness
6 Justin D. Wilson, and FlashParking, Inc. (“FlashParking”) witness Matthew
7 McCaffree. While I may respond to various positions taken, where I do not
8 address a specific issue, any lack of discussion should not in any way be
9 considered as an endorsement of a position.

10

11 Q4. ARE YOU RESPONDING TO ALL ISSUES DISCUSSED BY INTERVENORS
12 IN DIRECT TESTIMONY?

13 A. I am not responding to the supportive comments provided by various intervenors
14 regarding the TECI-1 Rider and the TECDA-1 Rider. For example,

- 15 • Flashparking’s witness’ recommendation that both the TECI-1 Rider and
16 the TECDA-1 Rider be approved by the Commission.²
- 17 • ChargePoint’s witness’ support for the approval of the TECI-1 Rider³ and
18 recommendation that the “Commission should also find that it is
19 appropriate for limited utility ownership of EV chargers.”⁴

² Direct Testimony of Matthew McCaffree at 6.

³ Direct Testimony of Justin Wilson at 14.

⁴ Direct Testimony of Justin Wilson at 24.

- 1 • The support for electric public utility ownership of EV charging
2 infrastructure and equipment from both El Paso Electric Company⁵ and
3 from Southwestern Public Service Company witness Jeremiah W.
4 Cunningham.⁶

5
6 **II. RESPONSE TO STAFF AND INTERVENORS – TECI-1 RIDER**

7 Q5. PLEASE PROVIDE AN OVERVIEW OF THE POSITIONS OF THE
8 PARTIES REGARDING THE PROVISION OF TRANSPORTATION
9 ELECTRIFICATION SERVICES BY ENTERGY OR OTHER VERTICALLY
10 INTEGRATED UTILITIES.

11 A. The Commission's Preliminary Order sets forth the following questions:

12 Question 68: Is it appropriate for an electric utility in a vertically
13 integrated area to own vehicle-charging facilities or other transportation
14 electrification and charging infrastructure or should the ownership of such
15 facilities be left to competitive providers?

16 Question 69: Should Entergy be allowed to own transportation
17 electrification and charging infrastructure—including vehicle-charging facilities-
18 in the manner it has proposed in its application, or should such ownership be
19 wholly left to customers or third parties?

⁵ El Paso Electric Company Statement of Position at 1.

⁶ Direct Testimony of Jeremiah W. Cunningham at 8.

1 Seven parties weighed in on one or both of these questions: Entergy (in its
2 Application), Staff, the Office of Public Utility Counsel, FlashParking, Inc.,
3 ChargePoint, Inc., El Paso Electric (Question 68) and Southwestern Public
4 Service Company (Question 68). All of the parties except Staff either support or
5 do not oppose riders TECI-1 and TECDA-1 and/or the right of vertically
6 integrated utilities to own TE infrastructure. The vertically integrated utility
7 parties and the competitive EV provider parties unanimously agree that vertically
8 integrated utilities have a role to play in the expansion of the EV charging market.

9
10 Q6. HAS ANYONE ELSE WEIGHED IN ON THESE ISSUES?

11 A. Yes. On November 15, 2022, Edison Electric Institute (“EEI”), an association
12 that represents all U.S. investor-owned electric companies, filed a letter in this
13 proceeding that discusses the “integral role electric companies play in accelerating
14 electric transportation through programs” like the TECI-1 and TECDA riders.⁷
15 EEI notes that “[a]s of July 2022, 62 electric companies in 34 states and the
16 District of Columbia have received regulatory approval to invest nearly
17 **\$3.7 billion** in EV programs”⁸ Regarding ETI’s proposal, EEI states that
18 Riders TECI-1 and TECDA:

19 focus on the rapid deployment of charging infrastructure and will
20 help ensure that the transition to EVs is a seamless one for Texans.
21 A decision to limit the scope of the current or future programs

⁷ Letter from EEI to Chairman Peter Lake of the Public Utility Commission of Texas, Nov. 15, 2022, Exhibit SMH-R-1 at 1.

⁸ *Id.* (emphasis in original).

1 proposed by Entergy now in favor of a more limited model of
2 electric company investment in electric transportation may
3 unintentionally and unnecessarily delay the market's growth.⁹
4

5 Per EEI:

6 Entergy has long demonstrated their commitment to ensuring that
7 current and future EV drivers have access to a foundational
8 network of EV charging stations. Through this coalition, Entergy is
9 leveraging the knowledge and resources of other NEHC members
10 to ensure that infrastructure is deployed efficiently and effectively,
11 as well as connecting to third parties that are interested in
12 partnering with electric companies to host or own charging
13 infrastructure.¹⁰
14

15 Regarding the general policy question of whether vertically-integrated electric
16 utilities should be permitted to own TE infrastructure, EEI states that if ownership
17 is prohibited, such a policy "would severely restrict the potential for proliferation
18 of EVs in Texas, particularly in underserved and unserved areas with low rates of
19 EV adoption such as rural communities that have not attracted private investment
20 from third-party charging providers."¹¹

21 EEI's letter concludes by encouraging adoption of ETT's proposed Riders
22 TEDI-1 and TECDA, which "provide the Commission with an opportunity to take
23 immediate, concrete action to advance the State's goals, make EV technology
24 available for all customers, maintain leadership in advanced transportation
25 technologies, and expand the benefits of electric transportation."¹²

⁹ *Id.* at 2.

¹⁰ *Id.* at 3.

¹¹ *Id.* at 2.

¹² *Id.* at 4.

- 1 Q7. HAVE ANY OTHER COMMISSIONS APPROVED A SIMILAR CONCEPT
2 TO SCHEDULE TECI?
- 3 A. Yes. On November 1, 2022, the Mississippi Public Service Commission
4 approved a similar charging infrastructure rider proposed by Entergy Mississippi,
5 LLC, named the Charging Infrastructure Rate Schedule CI-1.¹³ Also, in 2019 the
6 City Council of New Orleans approved a similar charging infrastructure rider
7 proposed by Entergy New Orleans, LLC, named the Electric Vehicle Charging
8 Infrastructure Rider.¹⁴ Finally, the Arkansas Public Service Commission has an
9 open proceeding to consider the same charging infrastructure rider proposed by
10 Entergy Arkansas, LLC, named the Charging Infrastructure Rider.¹⁵
11
- 12 Q8. MR. ABBOTT STATES “IT IS NOT APPROPRIATE FOR AN ELECTRIC
13 UTILITY IN A VERTICALLY INTEGRATED AREA TO OWN VEHICLE-
14 CHARGING FACILITIES OR OTHER TRANSPORTATION
15 ELECTRIFICATION AND CHARGING INFRASTRUCTURE.”¹⁶ HOW DO
16 YOU RESPOND?

¹³ Docket No. 2022-UN-44, *Notice of Intent of Entergy Mississippi, LLC, to Change Rates by Offering Entergy Mississippi, LLC Flex Charge Offering in Support of Customers Interest in Transportation Electrification*, (Nov. 1, 2022).

¹⁴ Docket No. UD-18-07, *Application of Entergy New Orleans, LLC for a Change in Electric and Gas Rates Pursuant to Council Resolution No. R-19-457* (Nov. 7, 2019).

¹⁵ Docket No. 22-026-TF, *In The Matter of the Application of Entergy Arkansas, LLC, for Proposed Tariffs Regarding Public Charging and Charging Infrastructure*.

¹⁶ Direct Testimony of Mr. Abbott at 7.

1 A. While I am not a lawyer, it is my understanding that Texas law does not preclude
2 ETI from constructing, owning, and maintaining transportation electrification
3 (“TE”) infrastructure and equipment.

4 Second, it is my interpretation of a 2020 FERC audit report¹⁷ that EV
5 infrastructure and equipment is utility equipment wherein FERC stated that the
6 EV chargers installed, owned, and maintained by San Diego Gas & Electric
7 Company (“SDG&E”) and located on host customer property are appropriately
8 recorded in utility property FERC account 371. FERC account 371 – Installations
9 on customers’ premises should include “the cost installed of equipment on the
10 customer’s side of a meter when the utility incurs such cost and when the utility
11 retains title to and assumes full responsibility for maintenance and replacement of
12 such property.” The FERC audit report stated, “[t]he EV charging stations are
13 made of several components that include hardware and software that facilitate
14 retail end-use customer access to a low voltage power supply with control and
15 monitoring oversight by SDG&E.”

¹⁷ See <https://cms.ferc.gov/sites/default/files/2021-03/FA19-3-000-SanDiegoGas-Electric.pdf>.

1 Third, the TECI-1 Rider is not materially different from the
2 PUCT-approved Additional Facilities Charge (“AFC”)¹⁸ Rider, Option B, or the
3 PUCT-approved Area Lighting Service (“ALS”) Rider.¹⁹

4 Additionally, EEI published the Electric Vehicle Sales and the Charging
5 Infrastructure Required Through 2030 article in which the authors describe the
6 role of the electric utility, stating, “[e]lectric companies are well-positioned to
7 deploy EV charging infrastructure,” further detailing that electric company
8 infrastructure may include development of make-ready infrastructure, installation
9 and owning of infrastructure, and offers of incentives.²⁰ In fact, per the Edison
10 Electric Institute’s July 2022 Electric Transportation Biannual State Regulatory
11 Update,²¹ electric companies are currently (and increasingly) engaged in many
12 different facets of TE, with 62 electric companies in 34 states and Washington,
13 DC, having received regulatory approval for TE filings.

14 Finally, ChargePoint also agrees with this view that electric companies
15 play a key role in development and ownership of EV charging infrastructure, as

¹⁹ See https://cdn.entergy-texas.com/userfiles/content/price/tariffs/eti_als.pdf?_ga=2.252265166.692491082.1668029709-624625611.1668029709.

²⁰ Satterfield, Charles, et al. Electric Vehicle Sales and the Charging Infrastructure Required Through 2030, Edison Electric Institute, June 2022, at 16. See <https://www.eei.org/-/media/Project/EEI/Documents/Issues-and-Policy/Electric-Transportation/EV-Forecast--Infrastructure-Report.pdf>.

²¹ See Electric Transportation Biannual State Regulatory Update. (November 2021) Edison Electric Institute. see: <https://www.eei.org/-/media/Project/EEI/Documents/Issues-and-Policy/Electric-Transportation/ET-Biannual-State-Regulatory-Update.pdf>.

1 indicated in Mr. Wilson's Direct Testimony.²² Vendors such as ChargePoint²³
2 and FlashParking²⁴ recommending the approval of ETI ownership of TE
3 infrastructure and equipment through the proposed TECI-1 Rider demonstrates
4 that there is a role for the utility in helping to support the TE infrastructure
5 buildout and that the ownership of such facilities should not be left only to
6 "Competitive Providers" or "third parties" as recommended by Mr. Abbott.

7 Mr. Abbott also recommends that TE electrification and charging
8 infrastructure "ownership should be wholly left to customers." I would contend
9 that TECI-1 Rider is about choice for ETI's site host customers. ETI's customers
10 have the choice to work with ETI for TE infrastructure installation and the choice
11 to work with ETI for TE equipment installation. For example, some customers
12 may not want to take on the burden of sourcing the installation and maintenance
13 of EV charging equipment. Some customers may prefer a turn-key solution
14 through TECI-1 Rider. Imagine a school district electrifying their fleet of school
15 buses. The school district administration may already be short staffed and
16 strained and unable to take on another task of sourcing all of the installation and
17 equipment vendors and then maintaining the EV chargers. Through TECI-1
18 Rider, ETI can take the uncertainty and stress of a new technology and new

²² Mr. Wilson states "ETI is uniquely positioned to support transportation electrification, which will support and encourage EV adoption." Direct Testimony of Justin Wilson at 5.

²³ Direct Testimony of Justin Wilson at 14.

²⁴ Direct Testimony of Matthew McCaffree at 24.

1 processes and assist that customer in their electrification needs with a turn-key
2 offering.

3 Other customers may prefer just to have the electric extension of service
4 and the make-ready infrastructure provided by ETI. Imagine a multi-unit housing
5 complex property manager who would like a few simple level-2 chargers installed
6 on their property. That property manager may have the resources to purchase,
7 install, and maintain that equipment, but would still like to use the proposed
8 TECI-1 Rider to install the electric extension of service and make-ready.

9 Electric utility, third party, “Competitive Providers,”²⁵ and customer,
10 ownership types are not mutually exclusive; all types of ownership types can
11 coexist together in order to advance TE forward for Texas customers. Through
12 the proposed TECI-1 Rider, ETI is only adding more options and more
13 information for customers, all while connecting customers with vendors and third
14 parties through TECI-1 Rider.

²⁵ ETI understands the use of “competitive providers” in the Direct Testimony of Mr. Abbott aligns with the ETI’s use of the term “Vendors” including OEMs, EVSE vendors, EVSPs, installers, and maintenance vendors.

1 Q9. HOW DO YOU RESPOND TO MR. ABBOTT'S CONTENTION THAT ETI,
2 AS AN ELECTRIC MONOPOLY, SHOULD NOT BE PERMITTED TO
3 PARTICIPATE IN A COMPETITIVE MARKET?²⁶

4 A. Mr. Abbott's argument is inconsistent both with how electric utilities operate and
5 with the rapidly changing electric infrastructure environment. For instance,
6 electricity production used to be solely within the province of monopoly providers
7 of electric generation. However, today, there are numerous competitive providers
8 of generation, including at the customer level. Thousands of customers within
9 ETI's service area have solar panels that generate electricity, and these were
10 purchased, installed, and are producing as a result of the competitive market. If,
11 as Mr. Abbott suggests, ETI should be categorically prohibited from participating
12 in a market that contains elements of competition, then it would have to get out of
13 the generation business altogether. However, that result would be inconsistent
14 with the Legislature's desire for ETI to continue to provide generation,
15 transmission, distribution, and retail service.²⁷

16

17 Q10. HOW HAS THE LEGISLATURE PROVIDED GUIDANCE ON THIS ISSUE?

18 A. Contrary to Mr. Abbott's assertions, it is my belief that the Legislature has
19 provided a clear indication that electric utilities outside ERCOT are permitted to
20 participate in electric services that are also provided by competitive enterprises.

²⁶ Direct Testimony of Mr. Abbott at 7.

²⁷ Tex. Util. Code §§39.452(a), (d), (i).

1 Just because a service can be provided by a competitive firm does not mean that a
2 utility outside ERCOT is prohibited from doing so. The opposite is true. For
3 instance, PURA declares that the provision of generation and retail services are
4 subject to the competitive market.²⁸ However, in the areas outside ERCOT, the
5 Legislature has permitted ETI and other utilities to continue to provide these
6 services. The same is true for TE infrastructure, just as it is true of additional
7 facilities that a grocery store or a service station might seek to have installed on
8 their property under ETI's current Rider AFC.

9 Mr. Abbott's arguments are also inconsistent with recently-enacted S.B.
10 1202.²⁹ That legislation is a recognition that the provision of EV charging
11 services falls within the traditional regulatory framework governing the provision
12 of electric utility services, as ETI provides.³⁰ The Legislature's decision to
13 exempt competitive providers in this nascent market did not likewise strip ETI's
14 traditional rights to provide electric delivery services. TECI-1 Rider is fully
15 consistent with the Legislature's desire to encourage the development of the EV
16 market. ETI has a role to play as a bridge between competitive providers and
17 end-use customers, both of which will benefit from the expansion of opportunities
18 afforded through TECI-1 Rider.

²⁸ Tex. Util. Code §§31.001(c); 39.001(a).

²⁹ See Tex. Util. Code §31.002(6)(J)(iv).

³⁰ See *id.*

1 Q11. MR. ABBOTT ASSERTS THAT ETI'S PROPOSED TECI-1 RIDER IS
2 "UNREASONABLY PREFERENTIAL AND DISCRIMINATORY, IS
3 INEQUITABLE, AND SHOULD BE REJECTED AS IT IS NOT JUST AND
4 REASONABLE."³¹ WHAT IS YOUR RESPONSE?

5 A. I disagree with Mr. Abbott's assertion. As an initial matter, rates can be
6 discriminatory when they unreasonably treat similarly situated customers in a
7 different manner. TECI-1 Rider targets a group of *potential* customers who are
8 *not similarly situated* to other ETI customers, and Mr. Abbott does not make any
9 argument to the contrary. However, as detailed at length in my direct testimony,
10 there are a host of reasons that customer adoption of EV charging options have
11 lagged, resulting in an underdeveloped TE market. Moreover, the TECI-1 Rider
12 is not materially different from other offerings that the Commission has approved
13 and that ETI provides to customers, and the TECI-1 Rider recovers costs from a
14 host customer in a manner not materially different from how those similar PUCT-
15 approved offerings are recovered currently. TECI-1 Rider is like these other
16 nondiscriminatory tariffs in that they meet a need that is specific to a particular
17 potential customer type if they choose to opt in.

18 For example, while the TECI-1 Rider is specific to TE infrastructure and
19 equipment, it is functionally identical to what ETI provides to customers today
20 through the PUCT-approved Additional Facilities AFC Rider, Option B. The
21 TECI-1 Rider was developed based on the same rationale and methodology

³¹ Direct Testimony of Mr. Abbott at 7.

1 behind ETI's existing AFC Rider. In principle and application, the TECI-1 Rider
2 is no different than the AFC Rider. Under the AFC Rider, the Company
3 constructs, owns, and maintains electrical infrastructure for the benefit of a
4 specific customer who in turn agrees to pay for that infrastructure via a fixed
5 payment each month.

6
7 Q12. PLEASE EXPLAIN FURTHER HOW THE PUCT-APPROVED AFC RIDER
8 AND ALS RIDER ARE SIMILAR TO THE PROPOSED TECI-1 RIDER?

9 A. ETI developed the TECI-1 Rider based on the rationale and methodology behind
10 ETI's existing PUCT-approved AFC Rider, Option B. Much like the AFC Rider,
11 ETI developed the percentage-based rates under TECI-1 Rider by calculating
12 level monthly payment percentages to be applied to the investment made by the
13 Company for the Recovery Term period between 1 year and 10 years, as I
14 describe further in my Direct Testimony.³²

15 In another example, the TECI-1 Rider is similar to the PUCT-approved
16 ALS Rider where ETI will install, own, and maintain the required area lighting
17 facilities for the use of the host site customer. The participating customer signs
18 up for the ALS Rider, benefits from the lighting service, and pays for the entirety
19 of the cost of the property and the services.

20 For all intents and purposes, the only difference between TECI-1 Rider;
21 AFC Rider, Option B; and the ALS Rider is that TECI-1 Rider involves utility-

³² Direct Testimony of Samantha Hill ("Hill Direct") at 17-18.

1 owned TE infrastructure, AFC Rider involves utility-owned infrastructure more
2 generically, and the ALS Rider involves lighting. The two reasons the Company
3 decided to seek PUCT approval of the proposed TECI-1 Rider versus use the
4 AFC Rider, Option B for TE infrastructure projects are that (1) AFC Rider,
5 Option B does not explicitly contemplate use of the Company's Electric
6 Extension Policy because the AFC Rider does not generally involve increased
7 revenues associated with the Company's infrastructure investment; and (2) the
8 AFC Rider reflects historic transmission and distribution O&M expenses, whereas
9 the TECI-1 Rider needs to reflect the customer-specified level and type of O&M
10 (e.g., extended warranty, networking service).

11
12 Q13. MR. ABBOTT CLAIMS THAT "FULLY EVALUATING ETI'S COSTS AND
13 REVENUES ASSOCIATED WITH TECI-1 RIDER WOULD BE INCREDIBLY
14 DIFFICULT, DUE TO THE CUSTOMER-SPECIFIC NATURE OF EACH AND
15 EVERY TE INFRASTRUCTURE INSTALLATION."³³ HOW DO YOU
16 RESPOND?

17 A. As stated previously, the TECI-1 Rider is developed based on similar existing
18 offerings and processes in the PUCT-approved AFC Rider and ALS Rider. ETI
19 believes, much like those current offerings, it will not be difficult to evaluate the
20 cost and revenues associated with TECI-1 Rider. In conjunction with TECI-1
21 Rider, once a customer desires to enter into the Customer Agreement with ETI to

³³ Direct Testimony of Mr. Abbott at 9.

1 construct TE infrastructure and equipment (if the customer chooses) the total
2 installed cost will be used to calculate the Net Monthly Bill using the set monthly
3 levelized percentages from the TECI-1 Rider Schedule. The customer will also
4 agree to pay a fixed monthly O&M charge for the actual cost of O&M expenses.
5 Installation, equipment, and maintenance will all be contracted with third party
6 vendors.

7
8 Q14. MR ABBOTT EXPRESSES A CONCERN “TECI-1 RIDER WOULD LIKELY
9 RESULT IN HARM TO OTHER RATEPAYERS IN ADDITION TO THE
10 POTENTIAL SHIFTING OF COSTS TO OTHER CUSTOMERS IF THE TECI
11 COSTS AND REVENUES DO NOT REASONABLY MATCH UP.”³⁴ HOW
12 DO YOU RESPOND?

13 A. I disagree with his concerns. I also disagree with similar concerns stated by
14 Mr. Evans that “some portion” of the infrastructure investment, depreciation
15 expense, and O&M expenses will be “borne by non-participating customers.”³⁵
16 As discussed in my Direct Testimony,³⁶ the costs incurred per the TECI-1 Rider
17 for a given project will only be charged to that customer who voluntary elects to
18 enroll in the TECI-1 Rider, and no costs associated with ETI’s investment will be
19 imposed on ETI’s other customers. The participating customer will enter into a

³⁴ Direct Testimony of Mr. Abbott at 9.

³⁵ Direct Testimony of Mr. Evans at 32.

³⁶ Hill Direct at 16.

1 Customer Agreement with ETI, and the customer will agree to pay a net monthly
2 TECI-1 Rider payment for a customer-selected Recovery Term (between 1 year
3 and 10 years), along with agreed-on amount to cover O&M costs incurred by ETI
4 for the Company-owned infrastructure. The net monthly payments collected
5 under the TECI-1 Rider will be treated as an offset against ETI's overall revenue
6 requirement. Once the customer-selected Recovery Term has ended, the costs to
7 install the infrastructure will have been fully recovered from the TECI-1 Rider
8 customer via its monthly payments made to ETI.

9 The Customer Agreement attached as Exhibit SFH-3 to my Direct
10 Testimony ensures that the host customer bears the responsibility for all of the
11 infrastructure and equipment costs that it does not want to own and maintain, as
12 well as the related O&M costs.

13 In order to further ensure that only the participating customer pays for
14 investments made in conjunction with the TECI-1 Rider, participating customers
15 must meet certain eligibility requirements, and their legal liabilities,
16 responsibilities, and obligations to pay for the costs incurred by the Company are
17 included in the Customer Agreement entered into between ETI and the
18 participating customer. Examples of those legal provisions include the terms and
19 conditions for contract termination and breach, duties of care, equipment casualty,
20 customers' liabilities and responsibilities, and force majeure. Further, ETI has the
21 right to remove and salvage any equipment owned by ETI, as covered in Part 4 -
22 Disposal of TECI Facilities.

1 Importantly, the TECI-1 Rider is not materially different from other
2 offerings that the Commission has approved and that ETI provides to customers
3 and the TECI-1 Rider recovers costs from a host customer in a manner not
4 materially different from how those similar PUCT-approved offerings are
5 recovered currently, most notably the AFC Rider and ALS Rider.

6
7 Q15. MR. ABBOTT EXPRESSES A CONCERN THAT NON-PARTICIPATING
8 CUSTOMERS MAY BE IMPACTED BY UNRECOVERED COSTS IF A
9 TECI-1 RIDER CUSTOMER WERE TO FILE FOR BANKRUPTCY OR
10 OTHERWISE DEFAULT.³⁷ HOW DO YOU RESPOND?

11 A. The risk of a customer declaring bankruptcy or defaulting on their obligation is an
12 inherent risk of providing electric service and constructing dedicated facilities
13 such as these under the AFC Rider, and ETI has proposed policies and procedures
14 in place to mitigate any potential impact to non-participating customers in the
15 event of a TECI-1 Rider customer bankruptcy or Customer Agreement default.
16 Pursuant to Section 5.2, Termination by Customer, of the Customer Agreement, if
17 a TECI-1 Rider customer ceases operations or sells their facility to another party
18 that does not choose to participate in the TECI-1 Rider prior to the end of the
19 initial term of the Customer Agreement, then the unrecovered costs of the ETI-
20 owned facilities are due from the TECI-1 Rider customer in a lump sum payment
21 equal to the remaining unpaid Fees calculated through the end of the Initial

³⁷ Direct Testimony of Mr. Abbott at 9.

1 Term.³⁸ ETI has the right to remove and salvage any equipment owned by ETI,
2 under Section 4.2, Disposal of TECI Facilities, of the Customer Agreement.³⁹

3 Further, the TECI-1 Rider customer may have a separate minimum
4 monthly charge to ensure that ETI recovers the four years of anticipated revenues
5 that were used to calculate the Net Monthly Bill.⁴⁰ In the event a TECI-1 Rider
6 customer discontinues service prior to the end of four years, it will be treated as
7 any other customer defaulting on their obligations under the Electric Service
8 Agreement and will enter the collections process.

9 Alternatively, in the case that ETI required financial security to secure the
10 TECI-1 Rider investment, that financial security can be retained by ETI to cover
11 the uncollected anticipated revenue and any remaining balance owed for the
12 investment made by ETI on behalf of the host customer.

13 Importantly, the TECI-1 Rider is not materially different from other
14 offerings that ETI provides to customers and the TECI-Rider has safeguards
15 protecting from bankruptcy and default in a manner not materially different from
16 similar PUCT-approved offerings, such as AFC Rider, Option B and ALS Rider.

17
18 Q16. MR. EVANS ASSERTS THAT THE PROJECTED NON-FUEL REVENUE
19 CREDIT USED IN CALCULATING THE TECI-1 RIDER NET MONTHLY

³⁸ TECI-1 Rider Rate Schedule attached as Exhibit SFH-3 to Hill Direct at Sec. 5.2.

³⁹ TECI-1 Rider Rate Schedule attached as Exhibit SFH-3 to Hill Direct at Sec. 4.2.

⁴⁰ Defined in Exhibit SFH-1 to Hill Direct.

1 PAYMENT SHOULD BE LIMITED TO ONLY ONE YEAR OF PROJECTED
2 REVENUE.⁴¹ WHAT IS YOUR RESPONSE?

3 A. Mr. Evans' assertion and supporting analysis are flawed and meritless. Mr. Evans
4 purports that the proposed credit, or unreimbursed upfront costs, equal to the first
5 four years of projected revenue⁴² from new or additional TE load, are not
6 supported by ETI's proposed base rates. Mr. Evans further states that, based on
7 an analysis that he performed, the General Service ("GS") rate schedule only
8 supports a distribution rate base equal to "0.29 years" of ETI's base revenues.⁴³
9 To make this claim, Mr. Evans provides an error-riddled analysis in his EDE-9
10 workpaper. The EDE-9 workpaper includes mislabeled rows, incorrectly using
11 the term "rate base" when what is being presented is actually "revenue
12 requirement." Further, in his EDE-9 workpaper, Mr. Evans calculates the
13 percentage of distribution demand costs included in the GS revenue requirement,
14 although he labels the percentage value with a dollar (\$) sign in his testimony, and
15 then somehow extrapolates that the percentage calculated has some relevance to
16 the number of years that embedded distribution costs are recovered per the GS
17 rate. Mr. Evan's calculation actually shows that the distribution demand-related
18 costs make up 29% of the GS revenue requirement, which is irrelevant to the

⁴¹ Direct Testimony of Mr. Evans at 30.

⁴² Projected revenue is defined in the Extension of Service Policy at Compliance Tariff Pursuant to the Final Order in Docket No. 39896; *Application of Entergy Texas, Inc. for Authority to Change Rates, Reconcile Fuel Costs, and Obtain Deferred Accounting Treatment*, Docket No. 40742, Compliance Tariff at 3.1-3.4 (Item No. 22) (Nov. 21, 2012), available at https://interchange.puc.texas.gov/Documents/40742_22_742846.PDF.

⁴³ Direct Testimony of Mr. Evans at 30.

1 recovery of distribution (and other embedded) costs from a TECI-1 Rider
2 customer and the proposed credit for anticipated revenue.

3 ETI's PUCT-approved GS base rate schedule is appropriately designed to
4 recover ETI's cost of service,⁴⁴ including the costs treated under the PUCT-
5 approved Electric Extension Policy. ETI designed the TECI-1 Rider to equitably
6 apply a similar policy and similar procedures for the resulting new or additional
7 TE-specific load, as are applied today through the PUCT-approved Electric
8 Extension Policy. Further, the design of TECI-1 Rider is based on the already
9 PUCT-approved AFC Rider. Applying the same extension of service policy to
10 TE customers as is applied to all other customers is fair and appropriate. The
11 PUCT-approved Electric Extension Policy⁴⁵ defines the following anticipated
12 revenue applications:

13 The Company will normally extend its overhead facilities to serve new
14 and permanent Customers when, in the Company's opinion the anticipated new
15 revenue involved is sufficient to produce a ratio of investment to revenue of 4 to 1
16 (excluding existing and future fuel recovery mechanisms and existing and future
17 non-base rate cost recovery mechanisms as applicable per regulatory authority,
18 gross charges and taxes), or less, without any contribution from the new Customer
19 or Customers involved.

⁴⁴ See Direct Testimony of Crystal K. Elbc.

⁴⁵ Compliance Tariff Pursuant to the Final Order in Docket No. 39896; *Application of Entergy Texas, Inc. for Authority to Change Rates, Reconcile Fuel Costs, and Obtain Deferred Accounting Treatment*, Docket No. 40742, Compliance Tariff at 3.1-3.4 (Item No. 22) (Nov. 21, 2012), available at https://interchange.puc.texas.gov/Documents/40742_22_742846.PDF.

1 When the required ratio is not satisfied, applicant or applicants for service
2 will be required to pay to the Company the amount by which the estimated
3 investment in the facilities exceeds the anticipated four-year revenue (excluding
4 existing and future fuel recovery mechanisms and existing and future non-base
5 rate cost recovery mechanisms as applicable per regulatory authority, gross
6 charges and taxes) to be obtained from applicable Customers to be served by the
7 facilities.

8 Finally, revenue generated from the use of the TE infrastructure and
9 equipment for the first four years, through the life of the equipment (proposed 10
10 years for EV charging infrastructure and equipment), and beyond, will offset the
11 costs of the ETI's investment and ultimately benefit all customers. It is expected
12 that once customers install TE infrastructure and purchase equipment such as
13 vehicles they will continue to use that equipment for the foreseeable future. For
14 example, based on projections and trends discussed in my Direct Testimony, it is
15 unrealistic to conceive that a customer would invest to electrify their vehicle(s)
16 today and then in ten years revert back to internal combustion engines. ETI-
17 enabled investments in TE infrastructure and equipment through the TECI-1
18 Rider will provide for additional benefits beyond the direct use of that
19 infrastructure, such as EV drivers charging their vehicles at home and other
20 locations, thus, increasing overall electricity sales across the jurisdiction, which
21 will benefit all of ETI's customers by helping to cover fixed costs.

1 Q17. MR. EVANS RECOMMENDS THAT ETI SHOULD BE REQUIRED TO
2 MAINTAIN SEPARATE ACCOUNTING FOR ALL INVESTMENT,
3 DEPRECIATION EXPENSE AND OTHER COSTS ASSOCIATED WITH THE
4 TECI-1 PROGRAM AND PROMOTION OF THAT PROGRAM.⁴⁶ HOW DO
5 YOU RESPOND?

6 A. The TECI-1 Rider installation costs would be booked in accordance with Federal
7 Energy Regulatory Commission's ("FERC") Uniform System of Accounts to
8 electric plant account 371 (Installations on customers' premises).

9 Depreciation expense associated directly with the TE infrastructure and
10 equipment investment will be booked in accordance with FERC Uniform System
11 of Accounts to account 403 (Depreciation expense).

12 All ongoing maintenance expenses associated directly with the TE
13 infrastructure and equipment investment will be booked in accordance with FERC
14 Uniform System of Accounts to account 598 (Maintenance of miscellaneous
15 distribution plant) and any operating expenses will be booked in accordance with
16 FERC Uniform System of Accounts to account 586 (Meter expenses).

17 Other expenses incurred such as additional property taxes will be booked
18 to the FERC accounts currently used for similar types of expenses. There is no
19 way to segregate other expenses such as property tax expenses, for example, as
20 those are calculated in the aggregate based on gross property values for ETI and
21 not by individual piece of property. However, an estimated property tax cost was

⁴⁶ Direct Testimony of Mr. Evans at 10.

1 included in the calculation of the recovery term percentages included in the tariff
2 and paid by the TECI-1 Rider customer.

3 Once a customer desires to enter into the Customer Agreement with ETI to
4 construct TE infrastructure in conjunction with the TECI-1 Rider, internal labor
5 and related costs will be estimated and incorporated into the total installed cost
6 that will be used to calculate the Net Monthly Bill.

7 For monthly revenues received under the TECI-1 Rider, ETI proposes that
8 those revenues be booked in accordance with FERC Uniform System of Accounts
9 to revenue account 456 (Other electric revenues) and treated as an offset against
10 ETI's overall revenue requirement.

11 Although the Company is not planning to add incremental resources at this
12 time to facilitate projects that are constructed in conjunction with the TECI-1
13 Rider, and as such does not anticipate incurring material administration costs, the
14 costs for an ETI employee or representative who will consult with a potential
15 TECI-1 Rider customer and finalize the customer agreement execution would be
16 recorded, where it is today for other ETI selling expenses, in FERC account 912
17 (Demonstrating and selling expenses).

1 Q18. WILL ETI PROVIDE VENDOR SELECTION⁴⁷ TO THE SITE HOST
2 CUSTOMER FOR THE COMPANY'S PROPOSED TECI-1 RICER, AS
3 RECOMMENDED BY MR. WILSON?

4 A. Yes. ETI plans to offer multiple vendors to best meet each customer's specific
5 needs. To specifically address Mr. Wilson's concern, each site host will be able
6 to choose the charging equipment and the network service provider for the EV
7 charging station(s) from a growing list of ETI pre-qualified vendors.

8

9 Q19. HOW DO YOU RESPOND TO MR. WILSON'S RECOMMENDATION THAT
10 "ALL MARKETING AND EDUCATIONAL MATERIALS FOR THE TECI-1
11 RIDER ARE VENDOR NEUTRAL?"⁴⁸

12 A. All marketing and educational materials for the TECI-1 Rider will be vendor
13 neutral.

⁴⁷ Direct Testimony of Justin Wilson at 4.

⁴⁸ Direct Testimony of Justin Wilson at 4.

1 Q20. WILL A TECI-1 RIDER CUSTOMER HAVE THE ABILITY TO SET
2 PRICING TO SELL CHARGING SERVICES TO EV DRIVERS,⁴⁹ AS
3 SUGGESTED BY MR. WILSON?

4 A. Yes, as discussed in my Direct Testimony,⁵⁰ the State of Texas enacted S.B.
5 No. 1202 during the 2021 legislative session, which addresses the “charge for
6 charging” issue as it relates to uncertainty of public utility status. In essence, an
7 individual or entity offering public access to an EV charger can now request
8 compensation from a person using that charger to supply electricity to their
9 vehicle.

10

11 Q21. HOW DO YOU RESPOND TO MR. WILSON’S RECOMMENDATION THAT
12 “IT IS APPROPRIATE FOR UTILITIES TO OWN MAKE-READY
13 INFRASTRUCTURE TO SUPPORT EV CHARGERS”⁵¹?

14 A. TECI-1 Rider already provides the option for ETI to install only the make-ready
15 infrastructure for non-residential site hosts. More specifically, the tariff allows a
16 non-residential customer (retail store, school, hospital, multi-family housing, etc.)
17 to choose the level of charging infrastructure that it desires to own and maintain
18 ranging from ETI installing, owning, and maintaining all of the EV charging

⁴⁹ Direct Testimony of Justin Wilson at 4.

⁵⁰ Hill Direct at 25.

⁵¹ Direct Testimony of Justin Wilson at 24.

1 infrastructure on the customer's property to a customer owning and maintaining
2 whatever portion of the charging infrastructure that it desires.
3

4 **III. RESPONSE TO STAFF AND INTERVENORS – TECDA-1 RIDER**

5 Q22. MR. ABBOTT STATES ETI'S PROPOSED TECDA-1 RIDER IS
6 UNREASONABLY PREFERENTIAL AND DISCRIMINATORY, IS
7 INEQUITABLE AND GRANTS AN UNREASONABLE PREFERENCE
8 CONCERNING RATES TO CERTAIN PERSONS IN A CLASSIFICATION,
9 AND SHOULD BE REJECTED AS IT IS NOT JUST AND REASONABLE.
10 HOW DO YOU RESPOND?

11 A. First, I disagree that TECDA-1 Rider is not just and reasonable. In my Direct
12 Testimony as well as in this Rebuttal Testimony, I describe the operational
13 characteristics associated with separately metered TE infrastructure and
14 equipment. The TECDA-1 Rider is carefully designed to address a known
15 impediment to much needed investment that will help consumers, businesses, and
16 governments and similar types of customers shift to TE with all of the associated
17 benefits including societal benefits discussed at length in my Direct Testimony.

18 Second, the Company offers several PUCT-approved Rider Schedules that
19 similarly recognize certain types of customers and implement billing provisions
20 that address the unique nature of those customers. For example, the Company's
21 Special Minimum Charge Rider to Schedules SGS, GS, and LGS ("Schedule
22 SMC") offers a potential reduction to an eligible customer's Billing Load for

1 purposes of calculating the monthly bill. Schedule SMC also offers seasonally
2 operated eligible customers (e.g., agricultural operations, municipal facilities) the
3 ability to disconnect and reconnect in the same calendar year without paying
4 additional fees. Finally, the Company offers the Rider for Institutions of Higher
5 Learning (“Schedule IHE”), which discounts the customer’s monthly bill, net of
6 the fuel adjustment portion, by 20%. Both of these Rider examples illustrate that
7 certain types of customers merit billing treatment that differs from other
8 customers that are on those same rate schedules.

9 Finally, as I discussed further below in this Rebuttal, TECDA-1 Rider
10 includes several proposed safeguards that help ensure other customers are
11 protected. For example, the Company proposed to limit the first 30,000 kW of
12 electric vehicle charging load to become operational after the rider’s effective
13 date, individual charging load less than or equal to 1,500 kW, and for a time limit
14 of not more than five years.

15
16 Q23. WHAT IMPACT WOULD APPROVAL OF THIS APPLICATION HAVE ON
17 ETI’S OTHER CUSTOMERS?

18 A. The results of the Ratepayer Impact Measure (“RIM”) test show a net benefit to
19 ETI’s customers. In my Direct Testimony, I explained the economic benefits that
20 TECDA-1 Rider provides to ETI’s customers and why TECDA-1 Rider is
21 necessary to promote greater investment in TE infrastructure and equipment, as
22 well as the EV market more generally. Taken in combination with the positive

1 RIM test, it is ETT's position that the evidence demonstrates that TECDA-1 Rider
2 is in the public interest and, respectfully, should be approved.

3
4 Q24. WHY IS THE RIM TEST USED AS A MEASURE OF COST
5 EFFECTIVENESS?

6 A. The RIM test is one of the economic evaluation tests that are set out in the
7 California Standard Practice Manual for Economic Analysis of Demand-Side
8 Management Programs ("California Manual"). The RIM test can be used to
9 evaluate the impact of a change in load from a demand-side management
10 ("DSM") program or contract for new additional load on the rates charged to a
11 utility's other customers, assuming instant ratemaking. The RIM test is also
12 useful for determining whether a concept such as TECDA-1 Rider could have an
13 adverse impact on other customers as far as their electric rates.

14 Before I explain further, it is important to note that the Company believes
15 the TECDA-1 Rider will promote increased investment in TE infrastructure and
16 equipment more generally. The TECDA-1 Rider should not be viewed through
17 the narrow lens of only reducing ETI's revenue from what it otherwise would
18 have been. Instead, as discussed further in my Direct Testimony, ETI believes
19 that the availability of the TECDA-1 Rider will encourage customers to invest in
20 charging infrastructure, including for public use, that they otherwise would not
21 have built. Viewed from that perspective, the TECDA-1 Rider should promote
22 increased investment that will lead to increased electricity sales, and based on the

1 results of the RIM test, investments in charging infrastructure will directly benefit
2 ETI's other customers in multiple ways.

3 The RIM test is designed to consider the incremental benefits of the
4 utility's proposal and the costs associated with providing the service in this case.
5 If benefits exceed costs, there is a positive contribution to the utility's overall rate
6 requirements, resulting in a lower rate requirement from all other customers. The
7 RIM test is typically expressed as a ratio of benefits to costs over time with a
8 positive RIM test having a value of 1.0 or greater.

9
10 Q25. WHAT BENEFITS ARE CONSIDERED IN THE RIM ANALYSIS?

11 A. In the RIM analysis of TECDA-1 Rider, there are three streams of benefits.

- 12 1. Revenue from base rates;
13 2. Revenue from fuel rates; and
14 3. Revenues from other base rate-related riders.⁵²

15
16 Q26. WHAT COSTS WERE INCORPORATED IN THE RIM ANALYSIS?

17 A. In the RIM analysis of TECDA-1 Rider, there are four streams of costs.

- 18 1. Incremental capacity supply costs;
19 2. Incremental energy supply costs;

⁵² The RIM test reflects base rate revenues using the proposed GS Rate Schedule, which incorporates revenues that are currently included in the Distribution Cost Recovery Factor Rider ("Rider DCRF"), Transmission Cost Recovery Factor Rider ("Rider TCRF"), and Generation Cost Recovery Rider ("GCRR"); meaning the other base rate related riders in the RIM test are set at zero.

1 3. Embedded transmission-related costs; and

2 4. Embedded distribution-related costs.⁵³

3

4 Q27. WHAT ARE THE RESULTS OF THE RIM TEST ANALYSIS?

5 A. The results of the RIM test analysis are summarized in Table 1 below.

6 **Table 1: Results of RIM Test (Net Present Value)**

Benefits	10-Yr RIM Results NPV				Average
	600 KW 5% LF	600 KW 10% LF	1,500 KW 5% LF	1,500 KW 10% LF	
Base Rate	\$444,387	\$597,194	\$1,104,024	\$1,486,042	\$907,912
Fuel	\$89,724	\$140,087	\$224,309	\$350,217	\$201,084
DCRF, TCRF, AND GCRR	\$0	\$0	\$0	\$0	\$0
Total Benefits	\$534,111	\$737,281	\$1,328,334	\$1,836,259	\$1,108,996
Costs					
Energy Supply Costs	\$116,200	\$179,992	\$290,501	\$449,980	\$259,168
Capacity Supply Costs	\$153,664	\$153,664	\$384,157	\$384,157	\$268,910
Transmission Costs	\$31,677	\$31,677	\$79,193	\$79,193	\$55,435
Distribution Costs	\$164,569	\$164,569	\$411,422	\$411,422	\$287,996
Total Costs	\$466,110	\$529,902	\$1,165,273	\$1,324,752	\$871,509
RIM B/C Ratio	1.15	1.39	1.14	1.39	1.27

7 Q28. HOW WILL ETI LIMIT ANY POTENTIAL ADVERSE IMPACTS TO OTHER

8 CUSTOMERS FROM TECDA-1 RIDER?

9 A. First, it is important to reiterate that the results of the RIM Test described above

10 indicate that TECDA-1 Rider will positively impact ETI's other customers by

⁵³ The Company does not believe there are any incremental transmission or distribution costs associated with the TECDA-1 Rider other than direct distribution costs that are addressed in the ETI's Commission-approved Electric Extension of Service Policy, or TECI-1 Rider via recovery term payment if approved. For completeness sake and to ensure conservatism, the RIM test incorporates embedded transmission and distribution costs.

1 helping to lower overall rates. It is also important to note that the new electric
2 loads that will take advantage of TECDA-1 Rider are incremental and would not
3 have otherwise been expected to occur absent TECDA-1 Rider being approved
4 and implemented. As discussed further in my Direct Testimony, ETI has heard
5 firsthand from several customers considering investing in new DC fast charging
6 infrastructure that would be available to the public that ETI's current electric rates
7 are cost-prohibitive from an overall "effective rate"⁵⁴ perspective given initial
8 expectations about electric vehicle charging.

9 Nonetheless, to limit any potential adverse impacts, ETI recommends that
10 a TECDA-1 Rider customer be limited to using TECDA-1 Rider for the first five
11 years after initially taking electric service under TECDA-1 Rider and 30,000 KW
12 of load. Also, TECDA-1 Rider will only be available to new customers that are
13 separately metered and that exclusively use electricity to charge electrified
14 transportation equipment for either their own purposes (e.g., a fleet operator) or to
15 provide charging to the public, which may or may not be for compensation.
16 These safeguards will help ensure that TECDA-1 Rider is only being used for its
17 intended purpose and that customers using TECDA-1 Rider have a reasonable
18 length of time for utilization to increase to 15 percent or greater as far as load
19 factor. In the event the customer's load factor improves to 15 percent or greater

⁵⁴ I use the term "effective rate" to refer to the common practice of dividing the entire electric bill by usage (kWh) and considering the resulting "per kWh" rate. Since 2017, owners of electric vehicle charging stations can provide electricity to the public for compensation and some providers charge drivers on a per kWh basis. As I explain in more detail, having more stable overall effective electric rates is an important consideration in whether entities will invest in public charging infrastructure.

1 prior to five years after taking TECDA-1 Rider, the mechanism will automatically
2 adjust, in that the customer will pay the demand charges per the GS Rate
3 Schedule. ETI also plans to monitor utilization of TECDA-1 Rider to ensure the
4 rider is working as intended and to better understand usage patterns and load
5 factors for new separate metered customers using electricity for electrified
6 transportation equipment.

7

8 Q29. MR. ABBOTT STATES THE TECDA-1 RIDER WOULD ACTUALLY
9 INCREASE ELECTRIC BILL UNCERTAINTY FOR CUSTOMERS.⁵⁵ HOW
10 DO YOU RESPOND?

11 A. I disagree. Mathematically, the TECDA-1 Rider has the effect of limiting the
12 effective cost per kWh under Rate Schedule GS to a narrow band between \$0.15
13 and \$0.20 per kWh based on current PUCT-approved rates and riders (before any
14 applicable taxes and fees). This band is consistent with effective rates⁵⁶ for
15 customers with load factors above 15%. Therefore, whether a customer using
16 TECDA-1 Rider has a lower load factor below 15% or a load factor that has
17 increased above 15%, the customer will have an expected effective rate between
18 \$0.15 and \$0.20 per kWh based on current rates and riders (before any applicable
19 taxes and fees). As such, if a site host customer can reasonably forecast the kWh
20 usage associated with the TE equipment, then they can easily determine a more

⁵⁵ Direct Testimony of Mr. Abbott at 10-11.

⁵⁶ I use the term “effective rate” to refer to the common practice of dividing the entire electric bill by usage (kWh) and considering the resulting “per kWh” rate.

1 certain estimated bill by multiplying their month usage (kWh) by the expected
2 effective rate of \$0.15 to \$0.20 per kWh.

3 For example, an EV charger at a multi-unit dwelling has usage of
4 2,000 kWh in October; as such, the customer can calculate 2,000 kWh multiplied
5 by roughly \$0.17 per kWh and estimate the bill at \$340 (before any applicable
6 taxes and fees). If usage in a future month goes up, the effective rate will remain
7 in that narrow band of \$0.15 to \$0.20 per kWh. The band does not change for the
8 TECDA-1 Rider customer based on existing PUCT-approved rates and riders.
9 This increased predictability in the effective rate reduces uncertainty. Imagine the
10 opposite situation where an EV charger site host customer does not have the
11 TECDA-1 Rider, using the example from my Direct Testimony,⁵⁷ one month the
12 customer incurs an effective rate of \$0.35 per kWh with a lower load factor and
13 the next month when utilization goes up the effective rate lowers to \$0.20 per
14 kWh. That \$0.15 per kWh difference creates an uncertain budgeting situation for
15 a EV charger site host customer. Such a dynamic is likely to inhibit customer
16 desire to install EV chargers with separate electric service. It also creates
17 uncertainty for the EV charger site host customer who is selling electricity to EV
18 drivers and due to EV market conditions, cannot realistically change the price
19 they charge the EV drivers by \$0.15 per kWh each month. A customer site that
20 may want to offer public charging access and derive revenue from offering that

⁵⁷ Hill Direct at 34, Figure 3.

1 service to EV drivers may be inhibited from doing so given the potential inability
2 to manage its effective rates.

3

4 Q30. WOULD A NON-EV CHARGER CUSTOMER WITH THE SAME LOAD
5 AND USAGE POTENTIALLY PAY MORE THAN THE EV CHARGER
6 CUSTOMER UTILIZING TECDA-1 RIDER, AS MR. ABBOTT ASSERTS?⁵⁸

7 A. While it is possible that this could happen, early adopting EV site host charging
8 customers are sufficiently different from other existing customers. I believe there
9 are good policy reasons for adopting TECDA for a limited time. TECDA-1 Rider
10 is designed to be a temporary solution for TE infrastructure and equipment
11 because of the unique electricity use case that is often characterized by high levels
12 of demand (kW), but relatively low energy utilization (kWh), especially in the
13 early adoption period. Once adoption increases and the TE industry moves out of
14 the early adoption period, load factors will increase in conjunction with utilization
15 and the TECDA-1 Rider will no longer be necessary. TECDA-1 Rider is deigned
16 to be self-correcting over time and is expected to “phase out” on its own as EV
17 adoption increases in the coming years and EV charging becomes more the norm
18 than the exception. Until that time, without targeted demand charge relief only
19 where and when it is needed (i.e., to new separately-metered accounts serving
20 only EV chargers with lower initial utilization), potential site host charging

⁵⁸ Direct Testimony of Mr. Abbott at 11.

1 customers may be hesitant to install infrastructure and equipment given the
2 potential inability to manage their overall effective rates.

3 Finally, as stated in my Direct Testimony, ETI recommends that a
4 TECDA-1 Rider customer be limited to using TECDA-1 Rider for a term of five
5 years, ensuring that the TECDA-1 Rider is transitory and only applicable during
6 the early adoption period.

7
8 Q31. MR. ABBOTT STATES THAT LOW LOAD FACTOR CUSTOMERS'
9 "CAPACITY OR DELIVERY COSTS PER KWH USED ARE
10 APPROPRIATELY HIGHER."⁵⁹ HOW DO YOU RESPOND?

11 A. I would instead characterize the demand charges in ETI's existing PUCT-
12 approved non-residential rate schedules as appropriately designed to recover
13 demand-related costs from *traditional* electric customers.⁶⁰ However the key
14 term in my statement is "traditional" where EV charging customers, in a
15 temporary early adoption period, are not "traditional" electric customers but
16 instead new customers adopting a *new* technology. The challenge with demand
17 charges for EV charging stations and other TE infrastructure is a temporary
18 timing challenge experienced during the early adoption period. In the early
19 adoption period, EV charging stations may experience low utilization, and a lower
20 load factor, because of the low adoption rate of EVs. Once EV adoption grows

⁵⁹ Direct Testimony of Mr. Abbott at 10.

⁶⁰ Hill Direct at 32.

1 out of the early adoption period and EV charging becomes more prevalent, EV
2 charging stations' energy utilization (kWh) will increase, the effective cost per
3 kWh will stabilize, and demand charges will no longer be a challenge.

4 My belief that ETI's rates and demand charges are appropriately designed
5 is also why I disagree with Mr. Wilson's recommendation that ETI develop a
6 long-term demand charge alternative rate for customers providing EV charging
7 services. I believe EV charging customers do not need a long-term demand
8 charge alternative rate, but instead a temporary demand charge rider like the
9 TECDA-1 Rider until the early adoption period has passed.

10 The proposed TECDA-1 Rider provides targeted demand charge relief
11 only where and when it is needed (i.e., to new separately metered accounts
12 serving only EV chargers with lower initial utilization). The TECDA-1 Rider is
13 designed to provide short-term mitigation of demand charges to advance the
14 adoption of TE infrastructure and equipment. Once the EV market develops
15 sufficiently, and load factors increase above 15%, it is important that customers
16 return to the as-designed non-residential rate schedules and their associated
17 demand charges because demand charges remain an important part of cost-of-
18 service principles traditionally applied to utility rates.

19 I would use the same reasoning to agree with Mr. Abbott's assertion that
20 for traditional electric customers "rate structures based on non-cost-based rates
21 provide inaccurate price signals that no longer reasonably reflect the actual cost to
22 serve each group of customers, and thus promote inefficient usage of the utility's

1 system.”⁶¹ However, to reiterate, TE customers do not mirror traditional electric
2 customers, most specifically during the early adoption period. TE customers need
3 a temporary short-term mitigation of demand charges to advance the adoption of
4 TE infrastructure and equipment. Once the EV market moves out of the early
5 adoption period, the TE customers will experience higher load factors above 15%
6 and be appropriately served by ETI’s non-residential rates.

7

8 Q32. MR. EVANS RECOMMENDS “THE UNDER-RECOVERED DEMAND
9 REVENUES THAT RESULT FROM THE APPLICATION OF THE BILLING
10 DEMAND CAP IN THE TECDA-1 RIDER SHOULD NOT BE BORNE BY
11 OTHER CUSTOMERS.”⁶² HOW DO YOU RESPOND?

12 A. Mr. Evans’ recommendation is misguided, and it is not accurate to describe the
13 revenues spurned by the TECDA-1 Rider as “under-recovered.” Rather, the
14 revenues facilitated by the TECDA-1 Rider are incremental and would not exist at
15 all without the demand charge assistance provided by TECDA-1 Rider. In the
16 same manner, I also take exception to Mr. Abbott’s claim that “a greater
17 penetration of EV charging stations taking service under the proposed TECDA-1
18 Rider would result in greater subsidies paid for by other customers.”⁶³ Instead, a
19 greater penetration of EV charging stations (with or without TECDA-1 Rider)

⁶¹ Direct Testimony of Mr. Abbott at 11.

⁶² Direct Testimony of Mr. Evans at 11.

⁶³ Direct Testimony of Mr. Abbott at 11.

1 would result in greater net-revenues paid for by participating customers, putting
2 downward pressure on rates for all customers. Further, as in my Rebuttal
3 Testimony above, the results of the RIM test show a net benefit to ETI's
4 customers.

5 TECDA-1 Rider was designed in response to demand charge challenges
6 communicated by ETI customers⁶⁴ and more generally across the industry in
7 many articles, studies, and surveys.⁶⁵ More specifically, demand charges serve as
8 a barrier to EV charger adoption. The TECDA-1 Rider is designed to temporarily
9 remove the early adoption demand charge barrier to promote TE infrastructure
10 and equipment installation. As such, more customers will install TE
11 infrastructure and equipment and revenues will increase. Any and all revenue
12 recovered under TECDA-1 Rider customers will be incremental; it would not
13 have been received otherwise. Increased revenues from charging usage would
14 help to cover fixed infrastructure and other costs, and thus put downward pressure
15 on rates for all of ETI's customers.

16 It is for this same reasoning that I disagree with Mr. Abbott's statement
17 that under TECDA-1 Rider, EV charging stations "pay only a portion of the
18 generation, transmission, and distribution capacity costs which they cause ETI to

⁶⁴ For example, ETI has been told by at least one customer that they no longer plan to install publicly available stations or do any further EV charging station business in ETI's jurisdiction due to unpredictable effective rates.

⁶⁵ Rate Design for EV Fast Charging: Demand Charges White Paper; Alliance for Transportation Electrification, Rate Design Task Force; May 27, 2022 - https://evtransportationalliance.org/wp-content/uploads/2022/06/Rate.Design.TF_Demand-Charge-Paper-Final-5.25.22.pdf and Fitzgerald, Garret and Nelder, Chris, Rocky Mountain Institute EVGo Fleet and Tariff Analysis; March 2017 - https://rmi.org/wp-content/uploads/2017/04/eLab_EVgo_Fleet_and_Tariff_Analysis_2017.pdf.

1 incur.” As shown by the RIM test results and discussed above in my Rebuttal
2 Testimony, the incremental benefits of TECDA-1 Rider are more than the costs
3 associated with providing the TECDA-1 Rider. In this case, the RIM test shows
4 that material generation, transmission, and distribution costs are not incurred due
5 to the addition of these customers. As such, Rider TECDA is expected to produce
6 a net benefit to all customers with increased revenue and to apply downward
7 pressure on rates. All customers will benefit from the expanded adoption of TE
8 infrastructure and equipment encouraged with TECDA-1 Rider.

9
10 Q33. MR. EVANS RECOMMENDS TECDA-1 RIDER SHOULD EXPIRE OR
11 REQUIRE RE-APPROVAL IN THE NEXT BASE RATE CASE.⁶⁶ DO YOU
12 AGREE?

13 A. No. TECDA-1 Rider is before the Commission in the current base rate case and
14 requiring a future Commission to consider the same TECDA-1 Rider again would
15 be duplicative and lead to avoidable costs to ETI customers. Further, the
16 uncertainty that an expiration and re-approval of TECDA-1 Rider would cause
17 could constrain future EV infrastructure expansion if site hosts cannot reasonably
18 rely on the existence of tariffs in the future.

⁶⁶ Direct Testimony of Mr. Evans at 11.

1 Q34. MR. EVANS RECOMMENDS THAT ALL TE RELATED ISSUES,
2 INCLUDING THE TECI-1 RIDER AND THE TECDA-1 RIDER, BE
3 ADDRESSED IN A SEPARATE CASE.⁶⁷ HOW DO YOU RESPOND?

4 A. I believe the TECI-1 Rider and the TECDA-1 Rider should remain in this rate
5 case to provide a quicker path to move forward infrastructure and equipment
6 installation for TE, shore power, and EV charging for ETI's customers in
7 Southeast Texas. If the TECI-1 Rider and the TECDA-1 Rider were to be
8 postponed and addressed in a separate case, it would slow the adoption of TE in
9 ETI's service territory. Further, including the ETI proposed riders in this
10 proceeding is consistent with comments provided by Commissioner Glotfelty and
11 Commissioner McAdams at the October 14, 2022 Open Meeting.

12
13 Q35. WHY IS IT IMPORTANT FOR THE COMMISSION TO ACT TIMELY TO
14 CONSIDER THE PROPOSED ETI TECI-1 RIDER AND TECDA-1 RIDER?

15 A. With rising adoption trends as discussed in my Direct Testimony,⁶⁸ as well as TE
16 specific federal funding available through National Electric Vehicle Infrastructure
17 Formula Program ("NEVI") fund program,⁶⁹ the adoption of TE in Texas is
18 expected to rapidly accelerate with the right infrastructure support. The TECI-1
19 Rider and the TECDA-1 Rider both provide ETI customers the TE support they

⁶⁷ Direct Testimony of Mr. Evans at 11.

⁶⁸ Hill Direct at 4-6.

⁶⁹ See <https://www.txdot.gov/projects/projects-studies/statewide/texas-electric-vehicle-planning-03-22-22.html>.

1 will need in order to install TE infrastructure and equipment and to operate that
2 equipment with demand charge relief for the early adoption period. The Texas
3 Department of Transportation (“TxDOT”) has a five-year time-line to provide
4 NEVI funding to local government and their partners to install qualifying EV
5 chargers. A separate proceeding could significantly delay the ability of various
6 market participants to utilize potential NEVI funding to install chargers using the
7 TECI-1 Rider and the TECDA-1 Rider. In fact, as stated by Chairman Lake in the
8 October 6, 2022 Open Meeting of the PUCT “this is an instance where the market
9 is moving faster than policy is, and so while it is not a perfect process we need to
10 address it...”⁷⁰

11 Of note, in a July 2021 white paper published by the International Council
12 on Clean Transportation (“ICCT”), the authors predicted the need for an increase
13 of 27% annually in public and workplace chargers to support electric vehicle
14 growth through 2030.⁷¹ The report concludes on the need for broad charging
15 infrastructure investments that will be needed at multi-unit dwellings to support
16 apartment residents. Specifically, the report states:

17 “EV charging will need to grow at greater rates in many rural areas
18 and across the Midwest and South. Lower-income communities
19 will need persistent investments, amounting to about 30% of
20 chargers and charging investments through 2030, to ensure
21 equitable infrastructure access.”⁷²

⁷⁰ See https://www.adminmonitor.com/tx/puct/open_meeting/20221006/.

⁷¹ Bauer, Gordon, et al. The International Council on Clean Transportation, 2021, Charging Up America: Assessing the Growing Need for U.S. Charging Infrastructure Through 2030, <https://theicct.org/wp-content/uploads/2021/12/charging-up-america-jul2021.pdf> at i.

⁷² *Id.*

1 ETI's proposed TECI-1 Rider specifically targets the infrastructure gaps in
2 EV charging infrastructure at multi-unit dwellings, workplaces, schools, hospitals,
3 and similar host sites, as it would create a mechanism by which those entities can
4 provide access to EV chargers to their tenants, employees, students and faculty,
5 and visitors. As discussed in my Direct Testimony, TECI-1 Rider is also very
6 flexible in that the EV charger host customer can decide what level of investment
7 to make; in other words, the EV charger host customer will decide whether ETI
8 only owns the distribution infrastructure, also owns the make-ready infrastructure,
9 and has the choice of whether ETI or the EV charger host customer owns and
10 maintains the EV charger(s) itself. Further, whether or not ETI owns and
11 maintains any or all of the equipment via TECI-1 Rider, the EV charger host
12 customer decides who has access to the equipment, whether there will be any fees
13 associated with its use, etc., with the EV charger host customer paying for the
14 investment through the customer's monthly electric bill. The Company strongly
15 believes that TECI-1 Rider will expand access to EV charging infrastructure in
16 many instances where host customers may be hesitant to invest given capital
17 constraints, lack of familiarity with maintaining equipment, etc.

18 Given the considerable need for TE and EV infrastructure and equipment
19 installations just within the next few years, many participants will need to
20 construct public chargers, and ETI's proposed TECI-1 Rider and TECDA-1 Rider
21 seeks to provide the support and customer service our site host customers will
22 need.

1 Q36. MR. WILSON RECOMMENDS THAT ETI REMOVE THE FIVE-YEAR
2 LIMITATION ON EACH CUSTOMER'S ABILITY TO UTILIZE THE
3 TECDA-1 RIDER.⁷³ HOW DO YOU RESPOND?

4 A. I do not believe that eliminating the five-year limit on each customer's ability to
5 utilize the TECDA-1 Rider would be reasonable. The five-year limit for each
6 qualifying customer electing to participate in TECDA-1 Rider was added as a
7 safeguard that helps limit potential impacts on other customers during the early
8 adoption period that I described in my Direct Testimony. As I discussed in my
9 Direct Testimony, the TECDA-1 Rider is designed to address demand charge
10 challenges experienced by owners and operators of EV chargers in the early
11 adoption period. The TECDA-1 Rider is not intended to provide demand charge
12 relief in perpetuity, but rather provide transitional relief during the early adoption
13 period. Setting a five-year limit per customer electing to use the TECDA-1 Rider
14 is reasonable and is an adequate amount of time to support the increase in
15 utilization that will otherwise improve the site's load factor to where the
16 TECDA-1 Rider is no longer necessary.

⁷³ Direct Testimony of Mr. Wilson at 4.

1 Q37. MR. WILSON RECOMMENDS AN INCREASE IN THE PROPOSED CAP ON
2 PARTICIPATING EV CHARGING LOAD FROM 30,000 KW TO
3 50,000 KW.⁷⁴ WHAT IS YOUR RESPONSE?

4 A. I believe that the 30,000 kW cap is sufficient to serve the needs of customers
5 adopting TE in ETI's service territory during the early adoption period.
6 Importantly the 30,000 kW limit for the TECDA-1 Rider was added as a
7 safeguard that helps limit potential impacts on other customers during the early
8 adoption period that I described in my Direct Testimony. In his testimony,
9 Mr. Wilson cites that "that there will be one million EVs on the road in Texas by
10 2028,"⁷⁵ but fails to recognize that number is a statewide projection and ETI
11 serves only a small portion of the state of Texas. The projections for the ETI
12 service territory would be far less, and as such the "demand for EV charging
13 services" would be less than Mr. Wilson alludes to in his Direct Testimony.
14 Mr. Wilson then equates the 30,000 kW cap on the TECDA-1 Rider to
15 "enrollment at 50 charging sites" that are NEVI eligible with "600 kW of
16 connected charging per site." Again, ETI serves a relatively small portion of
17 Texas and will not have a need for 50 NEVI eligible sites with 600 kW of
18 connected charging at each site. In fact, according to the TxDOT NEVI plan,
19 there is only one location in ETI's service territory (Winnie TX on Interstate 10)
20 that is eligible for NEVI funds to install 600 kW connected charging in order to

⁷⁴ Direct Testimony of Mr. Wilson at 4.

⁷⁵ Direct Testimony of Mr. Wilson at 21.

1 help complete the Alternative Fuels Corridor. Rather than focus exclusively on
2 NEVI-funded sites, the TECDA-1 Rider can help address the challenges that
3 demand charges can cause during the early adoption period for many EV charger
4 site hosts, with varying loads, and an array of electrification needs, many with
5 lower loads than the 600 kW level that Mr. Wilson suggests will be the typical
6 scenario.

7 Notably, in years 2-5 of the TxDOT NEVI plan, TxDOT will fund both
8 Direct Fast Charger (“DCFC”) and Level 2 stations. Other site host examples
9 include: a multi-unit housing complex may install three level 2 chargers totaling
10 up to 30 kW of available charging load; a retail store may install one 50 kW
11 DCFC; and an elementary school with an electric bus may install a 125 kW
12 DCFC. TECDA-1 Rider is designed to help site hosts install EV charging stations
13 across ETI’s service territory for a number of uses and needs. Since not every site
14 host will be installing chargers with loads of 600 kW, more than 50 charging site
15 hosts, as sited by Mr. Wilson, will be able to elect to participate in the TECDA-1
16 Rider, and the 30,000 kW cap should be sufficient.

1 Q38. MR. WILSON RECOMMENDS "THAT ALL SEPARATELY METERED
2 CHARGING SITES THAT MEET THE LOAD REQUIREMENTS BE
3 ELIGIBLE TO PARTICIPATE IN THE TECDA-1 RIDER, REGARDLESS OF
4 WHEN THE CHARGING SITE BECAME OPERATIONAL."⁷⁶ WHAT IS
5 YOUR RESPONSE?

6 A. The TECDA-1 Rider was developed to facilitate and encourage investment in TE
7 infrastructure and equipment and foster greater adoption of EVs and other similar
8 equipment by customers. ETI believes that the challenges that demand charges
9 present, as I discuss in my Direct Testimony,⁷⁷ have prevented some customers
10 from installing TE infrastructure and equipment. The TECDA-1 Rider is
11 designed to help move TE adoption forward and assist those customers who have
12 not yet adopted TE, but want to adopt TE. Similarly, when TxDOT opens the
13 NEVI application process, only applications with plans to install an EV site will
14 be eligible, and the EV stations that have already been installed will not be
15 eligible to apply for reimbursement. As such, eligibility on a forward-looking
16 basis is appropriate.

17
18 **IV. CONCLUSION**

19 Q39. DOES THIS CONCLUDE YOUR REBUTTAL TESTIMONY?

20 A. Yes.

⁷⁶ Direct Testimony of Mr. Wilson at 4.

November 15, 2022

Peter Lake
Chairman
Public Utility Commission of Texas
1701 N. Congress Ave., 7th Floor
Austin, Texas 78701

Re: Application of Entergy Texas, Inc. for Authority to Change Rates, Docket No. 53719

Dear Chairman Lake,

The Edison Electric Institute (EEI) respectfully submits this letter to the Public Utility Commission of Texas (Commission) in support of Entergy Texas's (Entergy) Petition in the above-referenced proceeding. EEI monitors electric vehicle (EV) proceedings across the country and appreciates the opportunity to provide the Commission with a national perspective on the integral role electric companies play in accelerating electric transportation through programs that deploy, incentivize, and provide rebates for charging infrastructure.

EEI is the association that represents all U.S. investor-owned electric companies. Our members operate in all 50 states and the District of Columbia and provide electricity for 235 million Americans. Collectively, the electric power industry supports more than 7 million jobs in communities across the United States. EEI's member companies, which include Entergy, deliver safe, reliable, affordable and increasingly clean electricity that powers the economy, transforms transportation through increased use of EVs, and enhances the lives of all Americans.

As of July 2022, 62 electric companies in 34 states and the District of Columbia have received regulatory approval to invest nearly **\$3.7 billion** in EV programs.¹ This includes recent approvals in Nevada,² California,³ Colorado,⁴ and Florida,⁵ which together account for more than \$800 million in investment. The type of EV program can vary by state and electric company, but usually includes at least one of the following elements: (1) investments in, or ownership of, charging infrastructure; (2) customer rebates or incentives for all or part of charging infrastructure deployment; (3) customer education and outreach; and (4) rate design. Separately or working in tandem, these elements can unlock value for all customers by growing and making the EV market attainable for all participants, by helping to integrate EV charging into the energy grid in a cost-

effective manner, and by driving outcomes that protect customer interests while maximizing customer value.

Electric companies, such as Entergy, are well-positioned to make targeted and strategic investments in EV charging infrastructure that benefit the broader community and accelerate EV adoption. Texas is currently one of the largest markets for EVs with the 4th highest EV sales among all states and is projected to remain a market leader in the coming years.⁶ The Electric Reliability Council of Texas (ERCOT) projects that there will be 1 million EVs on the road in Texas by 2028.⁷ Supporting this number of EVs would require roughly 5,000 public DC fast chargers (DCFC) and more than 110,000 public Level 2 chargers based on EEl's charging infrastructure projections.⁸ The current number of public DCFC and Level 2 chargers in Texas would need to quadruple to reach those figures.⁹ Public funding such as the National Electric Vehicle Infrastructure (NEVI) program will help to bridge the gap, but EEl projects that NEVI will only provide funding for roughly 20,000 of the 140,000 public DC fast charging stations needed across the nation and will not address the Level 2 charging gap at all.¹⁰ The need for charging infrastructure in Texas and across the U.S. is significant and electric company investment, including direct ownership of charging infrastructure, should be one of tools used to fulfill this need. The programs proposed in Entergy's filing focus on the rapid deployment of charging infrastructure and will help ensure that the transition to EVs is a seamless one for Texans. A decision to limit the scope of the current or future programs proposed by Entergy now in favor of a more limited model of electric company investment in electric transportation may unintentionally and unnecessarily delay the market's growth.

As a matter of policy, electric companies should not be prohibited from owning charging infrastructure. Doing so would eliminate any potential for electric companies to provide necessary investments for their customers and would severely restrict the potential for proliferation of EVs in Texas, particularly in underserved and unserved areas with low rates of EV adoption such as rural communities that have not attracted private investment from third-party charging providers. EVgo, the largest provider of open-network public fast charging in the U.S., explicitly recommends electric company ownership of charging infrastructure in these areas as part of its best practices for EV market development.¹¹ The Commission has the authority to determine the scope and scale of any proposed future investments and a blanket prohibition on electric company ownership of charging infrastructure at a time when this infrastructure is needed most will needlessly remove that flexibility. The possibility of electric company ownership of charging infrastructure in no way prohibits third parties from owning and operating public charging, but prohibiting electric company ownership would exclude companies with proven, long-standing expertise in the deployment of electric infrastructure from helping to support the

¹¹ See EVgo, Best Practices For Electric Vehicle Market Transformation, October 23, 2019, https://site-assets.evgo.com/f/78437/x/c54282fda7/evgo_whitepaper_utilitybestpractices_oct2019.pdf

nascent public charging market. As a founding member of EEI's National Electric Highway Coalition (NEHC), Entergy has long demonstrated their commitment to ensuring that current and future EV drivers have access to a foundational network of EV charging stations. Through this coalition, Entergy is leveraging the knowledge and resources of other NEHC members to ensure that infrastructure is deployed efficiently and effectively, as well as connecting to third parties that are interested in partnering with electric companies to host or own charging infrastructure.

The focus on the electric company role in charging infrastructure deployment generally pertains to public DCFC, but this ignores the vital role electric companies play in the provision of other types of charging infrastructure, including Level 2 charging infrastructure. The majority of the collective \$3.7 billion in approved investment in electric transportation from investor-owned utilities is focused on providing support for Level 2 charging, with more than \$770 million being dedicated to underserved communities.^{12,13} Public DCFC will play a critical role in ensuring EV drivers can travel long distances with confidence, but the majority of EV charging will take place either at home or at work and will utilize lower-power Level 2 chargers. This lower-power charging allows for easier managed charging of EVs in a way that more fully utilizes existing infrastructure and puts downward pressure on rates for all customers.¹⁴ For individuals in multi-family dwellings or who lack access to dedicated parking, a lack of public Level 2 charging can result in significantly higher operating costs due to reliance on more expensive public DCFC. The ability for electric companies to provide a low-cost charging solution to these individuals is critical to ensure that the benefits of EVs can be experienced by all, regardless of where they live or their financial circumstances. These programs play a critical role for disadvantaged communities, similar to other low-income assistance programs that provide support to Texans in need.

Further, issues 68 and 69 broadly refer to a prohibition of electric company ownership of electric transportation and charging infrastructure, terms which could extend well beyond the actual charging stations. The majority of approved electric company investments in charging infrastructure are for make-ready rebates or incentives, which often allow an electric company to install, own, and maintain the electrical infrastructure between the meter and the charging station itself. These programs have been instrumental in jumpstarting investment in charging infrastructure from third parties like Electrify America and 7-11.^{15,16} A prohibition on ownership of electric transportation infrastructure could also preclude this model of investment. Similarly, such a prohibition could affect electric company investment in fleet charging infrastructure. Fleet customers who choose to work jointly with investor-owned electric companies to partially own charging infrastructure would no longer be able to do so. This would have a particularly negative impact on public fleets such as school buses who may lack the funding necessary for a complete buildout of fleet charging infrastructure. Recent funding for electric school buses as part of the

Bipartisan Infrastructure Law, including funding for the deployment of 134 electric school buses across 13 school districts in Texas, covers only a portion of the cost of charging infrastructure and leaves school districts and their electric company partners to cover the remainder.¹⁷

As Texas works to implement policies that support greater deployment of EVs and grow the market for all participants, electric companies should not only be permitted to participate in this space but should also be given an important role in designing and implementing programs that best meet the needs of all customers while helping to integrate EV charging into the grid in a cost-effective manner. Entergy's program aims to do just that; the proposed enhancements provide the Commission with an opportunity to take immediate, concrete action to advance the State's goals, make EV technology available for all customers, maintain leadership in advanced transportation technologies, and expand the benefits of electric transportation.

EEI thanks the Commission for the opportunity to share our thoughts on Entergy's Petition and the overall growth of EVs in Texas.
