Though we may be familiar with working in the heat, we cannot afford to be overconfident. The heat is one of our main causes of events during the summer months. When preparing for work this summer, the temperature inside and out should be at the top of your safety review. As temperatures rise outside, work areas in some of our facilities can heat-up fast. Preventing heat stress is a matter of detecting conditions, controlling the factors and adjusting to mitigate the hazards. Employees are encouraged to download the OSHA-NIOSH Heat Safety Tool app. The app provides the following in the palm of your hand: - Real-time heat index and hourly forecasts, specific to your locations. Precautionary recommendations specific to heat index-associated risk levels. · Signs and symptoms of heat-related illnesses. · First aid information of heat-related illnesses. Prevent operational exposures to heat by: · Building a tolerance for working in the heat by gradually increasing activities and taking more breaks as workers acclimate to the heat. Adjusting work schedules to work the most strenuous tasks during the cooler parts of the day. · Remembering - Water, Rest, Shade. • Drink weter often - however, do not drink more than 1 ½ quarts per hour or more than 12 quarts per day, · Follow the work/rest and hydration schedule pictured below. Whenever possible, work in the shade. Share Your Knowledge

According to the Centers for Disease Control and Prevention, more than 600 people are killed in the United States by extreme heat every year. Share your knowledge of beating the heat with your family and friends. Encourage them to stay hydrated, stay cool in air-conditioned areas and wear lightweight and light-colored clothing.

2022 Benefits Plus+ Open Enrollment Now Open

Announcements | 2022-

Starts-Today

Benefits-Plus-Open-Enrollment-

10/20/2021

Benefits Plus+	Begins:
Open Enrollment	Wednesday, October 20, 202 7:30 a.m. CT
2022	Ends:
	Wednesday, November 10, 2
Entergy Hub + https://entergyhab.entergy.com	5:00 p.m. CT

What's New for 2022?

- HSA contributions: The contribution limits for health savings accounts for 2022 are:
 - \$3,650 for individuals.
 - \$7,300 for family.
 - Those age 55 or older have the option to contribute an additional \$1,000.
- HDHP premiums: For the first time, a small premium will be charged for the High Deductible Health Plan; be sure to check your inserts for your monthly and annual contributions.

https://entergy.sharepoint.com/Pages/Announcements/2022-Benefits-Plus--Open-Enrollment-Starts-Today.aspx

2021

5/25/22, 12:14 PM

2022 Benefits Plus+ Open Enrollment Now Open

- Wellness program updates: Certain wellness activities will be available only to active employees and spouses who are enrolled in a coverage option under the Entergy Benefits Plus+ Medical Plan:
 - On-site biometric health screenings.
 - Personal health coaching/health advising.
 - Tobacco cessation and nicotine replacement therapy.
 - Company-paid flu shots.

Important reminders:

- All active employees who wish to make a change or adjustment to benefits are required to enroll by accessing the HR self-service system via the PeopleSoft Hub.
- There are some important steps you must complete to ensure your open enrollment election is recorded.
 - · Click Submit: To successfully complete your 2022 open enrollment session, you must click Submit to capture your changes.
 - Print and/or Save: After changes have been made, remember to go back into the system and print and/or save your confirmation statement.
- If 2022 benefit elections are not made during Open Enrollment, you will not receive a confirmation statement. The same elections you had in 2021 will carry over, with the exception of FSA and/or HSA elections.
- You must make a new election for your FSA and/or HSA elections. They will NOT carry over.
- Also be aware, as you get older, life insurance plan premiums increase. If you will move into a new age bracket (five-year intervals) during 2021, make sure you review the life insurance plan premium rates.

Ways to access open enrollment materials

- If you have elected to receive your documents via electronic consent, you should have received an email last week with the link to your Open Enrollment documents.
- If you have elected to receive your documents via U.S. Postal mail, please be on the lookout for your Open Enrollment documents.
- Information about open enrollment is available online using these links:
 - 2022 open enrollment SharePoint site.
 - 2022 Benefits Plus+ Open Enrollment documents.

Aetna web meetings

If you are interested in finding out more information regarding medical plan options, please attend one of the live Aetna sessions being conducted, or you can watch a pre-recorded session. To register for a session or to watch a pre-recorded session, please refer to the Open Enrollment page in the Entergy Hub.

Live Sessions Schedule (Times in BOLD primarily focus on the High Deductible Health Plan (HDHP)

Billing Allocation Methodology	Basis for Selection of Billing Allocation Methodology
DIRECTTX	Billing Method DIRECTTX (100% to ETI) is appropriate to use for the project codes to which it applies because it allocates 100% of the charges to which it is applied to ETI. For example, Project Code F3PPR41133 (Texas Communications) captures costs associated with providing information to ETI customers (e.g., electric safety, customer service, storm preparation and restoration and energy saving information) through methods including TV, radio and print advertising, bill inserts, brochures, websites and social media. It is appropriate to allocate (i.e., bill directly) all of ESL's costs for this project code to ETI because only ETI employees and customers drive these communications activities and associated costs.
CUSTEGOP	Billing Method CUSTEGOP (Electric and Gas Customers) is appropriate to use for the project codes to which it applies because it allocates costs based on the 12-month average number of each EOC's residential, commercial, industrial, government, and municipal general business electric and gas customers. For example, Project Code F3PCR40118 (Utility Communications) captures costs associated with system-wide customer communications activities including developing communications plans; coordinating advertising, writing news releases; handling news media inquiries; coordinating news media interviews with company personnel; emergency and outage communications; and coordination of the external Entergy Operating Company (EOC) web sites and social media communications. Because these system-wide services support all regulated customers, it is reasonable to allocate costs based on the number of each EOC's customers.
EMPLOYAL	Billing Method EMPLOYAL (Full and Part-Time Employees) is appropriate to use for the project codes to which it applies because it allocates costs based on the number of full-time and part-time Entergy employees. For example, Project Code F3PCR40500 (Employee Communications) captures costs associated with payroll, office expenses, and vendor service expenses required to effectively communicate with all regulated and unregulated employees of Entergy. These communications are necessary to help Entergy inform, motivate, coordinate, and lead employees. The primary activities under this project code include updating the myEntergy intranet site, production of employee benefits and compensation materials, and other employee communications required to conduct the day to day business of Entergy. Because the costs of this project are driven by the number of communications that are necessary to communicate with employees, it is appropriate to allocate costs based on the number of employees.

ASSTALL	Billing Method ASSTALL (Total Assets) is appropriate to use for the project codes to which it applies because it allocates costs based on the total Entergy Corp. assets at period end. For example, Project Code F5PPECW516 (Enterprise Wide Communications) captures costs for broadcast, electronic and hard copy communications materials, meetings, plans, and training. The costs of these activities are driven by the size of the communities we serve and by the size and breadth of the organization. Because all Entergy companies, functions, customers, owners and employees benefit from this project, it is appropriate to use the total number of assets as a proxy for the size and complexity of the companies.
LBRCOMUN	Billing Method LBRCOMUN (ESL Labor Billed –Communications) is appropriate to use for the project codes to which it applies because it allocates costs based on total labor dollars billed to each company by ESL for the Communications function. For example, F5PPCOMSPT (Supervision and Support Corporate Communication) captures costs related to Corporate Communications departmental overhead costs. The primary activities included in this project code are related to support for the services performed by the Corporate Communications department such as general administrative tasks, general training and expenditures related to the business unit function. This billing method is appropriate because costs are based on labor billings from ESL Corporate Communications and indirect costs associated with this project are billed to the business units receiving the services.
CUSEOPCO	Billing Method CUSEOPCO (Electric Customers) is appropriate to use for the project codes to which it applies and is based on a twelve-month average number of electric residential, commercial, industrial, government, and municipal customers. For example, F5PPCOVID2 (COVID-19 Response – Call Centers), captures and manages costs associated with the activation of the COVID-19 Pandemic Response Plan concerning call centers, credit, and collections to uphold safe and reliable execution of Entergy operations in the call centers during the pandemic. This billing method is appropriate because costs associated with this project are directly related to the number of electric customers served by each operating company.

- Exhibit JJJ-3 Results of Lead-Lag Study
- Exhibit JJJ-4 Summary of Lead-Lag Study

1		I. <u>POSITION AND QUALIFICATIONS</u>
2	Q1.	PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.
3	A.	My name is Jay Joyce. My business address is Expergy®, 3838 Oak Lawn Avenue,
4		Suite 1000, Dallas, Texas, 75219.
5		
6	Q2.	WHAT SERVICES DOES EXPERGY OFFER?
7	A.	Founded in 2008, Expergy provides expert consulting services to the energy and
8		utility industries. These services include utility rate design, cost allocation, cash
9		working capital studies, depreciation and valuation studies, rate case assistance,
10		expert testimony, and other related consulting services.
11		
12	Q3.	WHAT IS YOUR POSITION WITH EXPERGY?
13	A.	I am president of the firm. My client responsibilities include preparing and
14		presenting analyses relating to pricing and rate design matters, cost of service and
15		revenue requirement issues, cash working capital studies, customer and weather
16		normalization, and other gas, electric, water, and wastewater related matters.
17		
18	Q4.	BRIEFLY DESCRIBE YOUR QUALIFICATIONS.
19	Α.	I graduated from the University of Texas in 1986 with a Bachelor of Business
20		Administration degree in Finance. In 1989, I earned a Master of Business
21		Administration degree from Southern Methodist University. While at Southern
22		Methodist University, I was employed by Reed-Stowe & Co. as a Senior
23		Consultant. My responsibilities at Reed-Stowe included developing and presenting

- analyses and testimony concerning revenue requirements, cost allocation, and rate design for water, wastewater, gas, electric, and cable utilities. In 1995, I joined the Management Consulting division of the Dallas office of Deloitte & Touche LLP (now Deloitte Consulting) as a Manager. In 1997, I was promoted to Senior Manager. My responsibilities included project management for a wide range of utility-related projects including merger and acquisition analyses, merger synergy analyses, cost of service studies, management audits, cash working
- capital studies, and preparation of expert testimony before various commissions,
 courts, and other governmental authorities.
- In January 2003, I resigned from Deloitte to join Management Applications Consulting ("MAC"), a small Pennsylvania professional services firm specializing in utility rate matters. In 2004, four professionals, including several MAC partners and myself, formed Alliance Consulting Group, a professional services firm headquartered in Dallas and focused on the utility industry. In December 2008, I sold my interest in the Alliance partnership, and I launched my own consulting firm, Expergy.

18 Q5. HAVE YOU PREVIOUSLY TESTIFIED AS AN EXPERT WITNESS?

A. Yes. I have previously testified before, or submitted written testimony to, the
Public Utility Commission of Texas ("Commission"); the Federal Energy
Regulatory Commission; the Public Utilities Commission of Ohio; the Arkansas
Public Service Commission; the Railroad Commission of Texas; the Public Service
Commission of West Virginia; the Texas Commission on Environmental Quality;

1		the Virginia State Corporation Commission; the U.S. District Court for the
2		Northern District of California; the U.S. District Court for the Northern Division of
3		Texas; the District Court of Travis County, Texas (419th Judicial District); and the
4		Superior Court of Fulton County, Georgia. Exhibit JJJ-1 provides a listing of the
5		utility proceedings in which I have appeared as an expert witness, participated as
6		an expert, or made formal presentations in utility matters.
7		
8	Q6.	ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?
9	A.	I am testifying on behalf of Entergy Texas, Inc. ("ETI" or the "Company").
10		
11		II. <u>INTRODUCTION</u>
12	Q7.	WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS PROCEEDING?
12 13	Q7. A.	WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS PROCEEDING? The purpose of my testimony is to sponsor the results of the lead-lag study for
13		The purpose of my testimony is to sponsor the results of the lead-lag study for
13 14		The purpose of my testimony is to sponsor the results of the lead-lag study for measuring the cash working capital ("CWC") allowance required for the
13 14 15		The purpose of my testimony is to sponsor the results of the lead-lag study for measuring the cash working capital ("CWC") allowance required for the Company's operations, consistent with 16 Tex. Admin. Code ("TAC")
13 14 15 16		The purpose of my testimony is to sponsor the results of the lead-lag study for measuring the cash working capital ("CWC") allowance required for the Company's operations, consistent with 16 Tex. Admin. Code ("TAC")
13 14 15 16 17	A.	The purpose of my testimony is to sponsor the results of the lead-lag study for measuring the cash working capital ("CWC") allowance required for the Company's operations, consistent with 16 Tex. Admin. Code ("TAC") § 25.231(c)(2)(B)(iii), which is attached as Exhibit JJJ-2.
13 14 15 16 17 18	A.	The purpose of my testimony is to sponsor the results of the lead-lag study for measuring the cash working capital ("CWC") allowance required for the Company's operations, consistent with 16 Tex. Admin. Code ("TAC") § 25.231(c)(2)(B)(iii), which is attached as Exhibit JJJ-2. CAN YOU PROVIDE A DEFINITION OF CWC AS A RATE BASE
13 14 15 16 17 18 19	A. Q8.	The purpose of my testimony is to sponsor the results of the lead-lag study for measuring the cash working capital ("CWC") allowance required for the Company's operations, consistent with 16 Tex. Admin. Code ("TAC") § 25.231(c)(2)(B)(iii), which is attached as Exhibit JJJ-2. CAN YOU PROVIDE A DEFINITION OF CWC AS A RATE BASE COMPONENT?

Q9. WOULD YOU EXPLAIN THE PURPOSE OF THE RATE BASE, AND THE ROLE OF CWC, IN THE REGULATORY PROCESS?

3 A. Yes. It is a common practice for regulators to establish the total costs incurred in 4 providing service (i.e., the Cost of Service) and to use such costs, with appropriate 5 adjustments, as the revenue requirement from which rates are fixed and charged for 6 the services provided. Texas follows this approach in accordance with state law. 7 A significant component of Cost of Service is the cost of financing the investor 8 capital required to build facilities and maintain ongoing operations. Portions of 9 such capital funding by investors, such as the capital required to build plant 10 facilities or to maintain supplies, are readily available. These costs are explicitly measured and may be directly accessed in the financial statements. Certain other 11 12 funding requirements are not explicitly measured from a single account in the 13 Company's financial records; thus, the level of funding used to support these 14 investor capital requirements must be determined through special analyses. One such analysis has traditionally been labeled a "lead lag study," which determines 15 16 the cash working capital that the utility requires for the purposes I noted earlier. 17 Texas recognizes CWC as a component of rate base under 16 TAC 18 25.231(c)(2)(B) and provides for use of a lead-lag study to determine the CWC 19 allowance, along with certain other specified components (e.g., reasonable 20 inventories and prepayments). When the various components of the rate base, 21 including CWC, are adequately identified and combined, a correct measure of 22 investor capital funding is produced. Below I describe in more detail the meanings of the terms "lead" and "lag." 23

- A. Yes. Exhibit JJJ-1 through Exhibit JJJ-4, which are attached to this testimony, were
 assimilated or prepared by me or under my direct supervision and control. The
 Rate Filing Package schedules that I sponsor, my direct testimony, my testimony
 exhibits, and all work papers associated with these documents were prepared under
 my direction, supervision, or control and are true and correct to the best of my
 knowledge.
- 9
- 10 Q11. DID YOU CONDUCT THE COMPANY'S LEAD-LAG STUDY PRESENTED
 11 IN THIS PROCEEDING?
- A. Yes. The results of the lead-lag study are attached as Exhibit JJJ-3, and a summary
 of the lead-lag study is attached as Exhibit JJJ-4.
- 14

15 Q12. DO YOU SPONSOR OR CO-SPONSOR ANY SCHEDULES IN THE16 COMPANY'S RATE FILING PACKAGE?

17 A. Yes, I do. I am co-sponsoring Schedule E-4 in the Company's Rate Filing Package
18 as well as the work papers and other documentation supporting the lead-lag study
19 used to prepare that schedule.

1		III. <u>LEAD-LAG STUDY APPROACH</u>
2	Q13,	PLEASE DESCRIBE THE GENERAL APPROACH YOU USED TO CONDUCT
3		THE LEAD-LAG STUDY.
4	Α.	The lead-lag study reflects costs associated with the test period of January 1, 2021,
5		through December 31, 2021 ("Test Year"). In order to accurately measure investor
6		supplied capital, my lead-lag study was developed using the following parameters:
7		1. The lead-lag study used a cash method and did not consider non-cash items;
8		2. The lead-lag study was performed in accordance with 16 TAC
9		§ 25.231(c)(2)(B)(iii). For example, to determine the lead days for
10		expenses, the later of the invoice due date or the payment clear date was
11		used. If the payment was made by check, check float lead (i.e., the average
12		time between check date and encashment) was also applied to the expense
13		lead; and
14		3. The amortization of those expenses that the Company classifies as "prepaid
15		expenses" for ratemaking purposes was specifically quantified and
16		excluded from the revenue requirements used to calculate the Company's
17		CWC requirements.
18		
19	Q14.	WOULD YOU DESCRIBE THE APPLICATION OF THE TERMS "LEAD"
20		AND "LAG" AS USED IN THE LEAD-LAG STUDY?
21	А.	The terms "lead" and "lag" have been applied in various ways. For purposes of

this presentation, I have used the terms "revenue lag" and "expense lead" asfollows:

1		1. revenue lag – the number of days of lag time between the delivery of electric
2		service to the Company's customers and the subsequent receipt of payments
3		for service; and
4		2. expense lead – the number of days of lead time between the service period
5		of goods or services used by the Company to provide electric service and
6		the payments to vendors for those goods and services.
7		
8	Q15,	HOW DID YOU DEVELOP THE LEAD AND LAG DAYS IN YOUR CWC
9		STUDY?
10	Α.	The composite revenue lag days were developed from the billing and payment
11		patterns of the Company's customers. Similarly, the expense lead days for each of
12		the various categories of system expenses were developed by measuring the period
13		of time from when the costs were incurred until payments were made for such costs.
14		As necessary, random samples of data were used to develop net lead or lag days
15		based on reasonable and unbiased sampling methods. The sampling methods were
16		typical of the methods used to develop CWC studies. The net difference between
17		the computed Revenue Lag days for the various revenue requirement categories
18		and the computed Expense Lead days was multiplied by the corresponding average
19		daily revenue requirements of the system for each category. The sum of the
20		resulting amounts produces the net CWC required.

1	Q16.	HAVE YOU SUBMITTED AN EXHIBIT THAT REFLECTS AN ACCURATE
2		MEASUREMENT OF THESE INVESTOR PROVIDED FUNDS?
3	A.	Yes. Exhibit JJJ-3 contains the results of the study as those results apply to electric
4		services provided by ETI. The following sections describe the methods used in the
5		calculation of the lag days for revenue collection and the lead days for expense
6		payment.
7		
8		A. <u>Revenue Lag</u>
9	Q17.	HOW WAS THE REVENUE LAG DEVELOPED IN THE LEAD-LAG STUDY?
10	Α.	Revenue Lag days consist of four components: (1) the service period lag measured
11		from the middle of the period for which service is billed, (2) the billing lag which
12		reflects the time required to process and record bills, (3) the collection lag that
13		identifies the time delay between the recording of bills and the receipt of the billed
14		revenues, and (4) the receipt of funds lag which measures the delay in the bank's
15		clearance of deposited check payments. The total number of days produced by the
16		sum of the four components represents the amount of time between the delivery of
17		service to customers and the receipt of the related revenues for such service.
18		The first of these four components, the service period lag, measures the time
19		span over which services are provided. This Commission has consistently adopted
20		an approach that relies on the mid-point of the service period as the common point
21		for measuring the cost incurrence and the cost recovery periods. This approach
22		assumes that the electricity is delivered evenly over the service period.

1 The second component is the time consumed in the billing process, or the 2 *billing lag.* In ETI's billing process, this period is measured as the difference from 3 the date the meter is read to the date the invoice is sent to the customer. The billing lag for third-party customers (residential, commercial, industrial, public authority, 4 5 and street lighting) was measured by examining a random sample of customer 6 invoices to determine the number of days between the meter read date and the 7 mailing date for each invoice. The billing lag for affiliate revenues (MSS-4) is zero 8 since these accounts are billed electronically at the end of the service period. 9 The third component, the *collection lag*, reflects the time between billing 10 for the services rendered and the receipt from customers of the revenues billed. The collection lag for third-party customers was determined from a random sample of 11 12 invoices for the residential, commercial, industrial, public authority, and street 13 lighting customer billings during the Test Year by measuring the time between the 14 mailing date and actual payment receipt date for each invoice. The collection lag 15 for MSS-4 revenues is based on the actual payment dates.

16 The fourth component of the revenue recovery lag, the *receipts of funds lag*, 17 represents the time between the receipt of funds from customers until the funds 18 clear the banks and are available to the Company. The lag associated with the cash 19 receipts float recovery component is computed on the assumption that one business 20 day is required to clear the checks, and that electronic payments are available to the 21 Company on the date received. Approximately 73% of the payments were made 22 by check, and the overall cash receipts float is 0.39 days.

1		Each of these revenue lag components was totaled and weighted by					
2		customer class revenues to arrive at the overall revenue lag days for the Test Year.					
3							
4		B. <u>Expense Lead – Operation & Maintenance Expenses</u>					
5	Q18.	PLEASE EXPLAIN THE O&M EXPENSE LEAD DAYS.					
6	Α.	In determining the lead days for operation and maintenance ("O&M") expenses,					
7		total system O&M expenses were first separated into Energy Costs and Other O&M					
8		Expenses. Within each group, the expenses were further divided into subcategories					
9		for further analysis and measurement of the lead days for each type of expense.					
10							
11		1. <u>Energy Costs</u>					
12		a. <u>Fuel</u>					
13	Q19.	PLEASE EXPLAIN THE CALCULATION OF FUEL LEAD DAYS.					
14	Α.	In order to determine the lead days for fuel expenses, a random sample of fuel					
15		invoices was used to determine the service periods and payment due dates for each					
16		of the sampled invoices, and these dates were compared to the subsequent payment					
17		of each invoice.					
18							
19		b. <u>Purchased Power</u>					
20	Q20.	PLEASE EXPLAIN THE CALCULATION OF LEAD DAYS FOR					
21		PURCHASED POWER.					
22	Α.	Purchased power consists of two major groups: (1) MSS-4 Purchases and (2) Other					
23		Purchased Power. Other Purchased Power consists of Cogeneration Purchases,					

1		Renewable Energy Credits, MISO settlements, and Third-Party PPA transactions.
2		Based on the number of transactions for each group, either the entire population of
3		Test Year transactions or a sample of Test Year transactions were analyzed and
4		compared to the subsequent payment of each invoice. The resulting lead days were
5		applied to average daily purchased power costs to measure the CWC supplied by
6		purchased power suppliers.
7		
8		2. <u>Other Operation & Maintenance Expenses</u>
9	Q21.	PLEASE EXPLAIN THE OTHER O&M EXPENSE LEAD DAYS.
10	Α.	In determining the lead days for this group of expenses, total system expenses were
11		first separated into four groups-regular payroll costs, incentive payroll costs,
12		affiliate service company transactions, and all other O&M costs (e.g., materials,
13		services, etc.).
14		
15		a. <u>Regular Payroll</u>
16	Q22.	HOW WERE THE LEAD DAYS FOR REGULAR PAYROLL COSTS
17		DETERMINED?
18	Α.	The lead days for regular payroll were based upon the Company's wage payment
19		process that employs bi-weekly pay periods. Employees are paid on Friday, which
20		is six days after the end of the pay period ending on Saturday. The lead days for
21		payroll costs were computed by determining the average days of service being
22		reimbursed and adding the days between the end of each service period and the
23		payment to employees. This calculation produces the number of total days between

1 the middle of the period for which employees' costs were recorded and the 2 disbursement of the payments. 3 In the analysis of regular payroll expenses, all of the CWC Test Period 4 payments were utilized. The total Company payroll was segmented into separate 5 components of regular pay and payroll deductions. 6 7 DOES YOUR LEAD-LAG STUDY CONSIDER CHECK FLOAT FOR Q23. 8 PURPOSES OF DETERMINING THE LEAD DAYS ATTRIBUTABLE TO 9 PAYROLL COSTS? 10 A. Yes, with respect to the issuance of paper check payments. The majority of 11 employee wages are paid by direct deposit, with the remainder being paid by paper 12 check. Direct deposit payments clear on payday and thus, have no check float. 13 Paper payroll check clearing times were established based on a random sample; a 14 check float was added to paper check payments based on the results of this sample. 15 16 b. **Incentive Pay** 17 Q24. PLEASE EXPLAIN THE CALCULATION OF LEAD DAYS FOR ETI'S 18 INCENTIVE PAYROLL. 19 Α. The Company's annual incentive program payments were made in the first quarter 20 of 2021 and were based on calendar year 2020 performance. The lead days were 21 based on the weighted days between the midpoint of the service period (July 1, 22 2020) and the date the incentives were paid on March 10, 2021. Check float was applied to the bonus payments made by paper check. 23

1		c. <u>Affiliate Service Company Transactions</u>
2	Q25.	HOW DID YOU DERIVE THE LEAD DAYS ASSOCIATED WITH AFFILIATE
3		SERVICE COMPANY TRANSACTIONS?
4	Α.	Entergy Services, LLC charges are settled in the month following the month in
5		which charges were incurred. Thus, the service period is calculated as the number
6		of days from the mid-month to the later of the contractual due date or the actual
7		settlement date in the following month. Because these payments were made
8		electronically, no check float was assigned.
9		
10		d. <u>Other Third-Party O&M Expenses</u>
11	Q26.	HOW WERE THE LEAD DAYS DETERMINED FOR THE REMAINING
12		EXPENSES IN THE O&M EXPENSE GROUP?
13	A.	The measure of lead days for the expenses in this group of Other O&M Expenses
14		was based on actual data from samples of these expenses recorded during the test
15		period.
16		
17	Q27.	HOW WAS THE MIDPOINT OF THE SERVICE PERIOD FOR OTHER THIRD-
18		PARTY O&M COSTS DEVELOPED?
19	A.	Consistent with previous Commission rulings, the Company's study estimates the
20		midpoint of the service period independently for each invoice rather than assuming
21		that the invoice date is the midpoint of the service period for all invoices. Each of
22		the sample items was carefully examined to determine the service period and the
23		invoice due date. The available original source documentation is included as part

1		of the work papers to Schedule E-4 supporting the CWC study. Lead days were
2		calculated from the midpoint of the service period (if available) until the later of
3		the invoice due date or the actual payment cleared date. If no information was
4		available on the service period of a particular invoice, the invoice date was used as
5		the assumed midpoint of the service period. This is also consistent with previous
6		Commission rulings.
7		The lead days for Other O&M expenses were dollar-weighted to develop
8		the lead days, as detailed in the study.
9		
10		C. <u>Expense Lead – Current Federal Income Tax Expense</u>
10 11	Q28.	C. <u>Expense Lead – Current Federal Income Tax Expense</u> WHAT ARE THE LEAD DAYS ASSIGNED TO FEDERAL INCOME TAXES?
	Q28. A.	
11	-	WHAT ARE THE LEAD DAYS ASSIGNED TO FEDERAL INCOME TAXES?
11 12	-	WHAT ARE THE LEAD DAYS ASSIGNED TO FEDERAL INCOME TAXES? As required by 16 TAC § 25.231(c)(2)(B)(iii)(IV)(f), the lead days for federal
11 12 13	-	WHAT ARE THE LEAD DAYS ASSIGNED TO FEDERAL INCOME TAXES? As required by 16 TAC § 25.231(c)(2)(B)(iii)(IV)(f), the lead days for federal income taxes were calculated by measuring the days between the midpoints of the
11 12 13 14	-	WHAT ARE THE LEAD DAYS ASSIGNED TO FEDERAL INCOME TAXES? As required by 16 TAC § 25.231(c)(2)(B)(iii)(IV)(f), the lead days for federal income taxes were calculated by measuring the days between the midpoints of the annual calendar year service periods (as the tax is incurred throughout the year) and
11 12 13 14 15	-	WHAT ARE THE LEAD DAYS ASSIGNED TO FEDERAL INCOME TAXES? As required by 16 TAC § 25.231(c)(2)(B)(iii)(IV)(f), the lead days for federal income taxes were calculated by measuring the days between the midpoints of the annual calendar year service periods (as the tax is incurred throughout the year) and the actual payment dates. Payment of at least 100% of the estimated tax for the

1		D. <u>Expense Lead and Lag – Taxes Other than Income Taxes</u>
2	Q29,	HOW WERE THE LEAD OR LAG DAYS FOR TAXES OTHER THAN
3		INCOME TAXES MEASURED?
4	Α.	This group of taxes consists of: (1) Payroll-related taxes (FICA, Federal
5		Unemployment, and State Unemployment), (2) Ad Valorem Taxes, (3) Public
6		Utility Commission Assessment, and (4) Texas State Franchise (Gross Margin)
7		Taxes. The payment leads or lags for the various payroll taxes were calculated
8		from the midpoints of the applicable assessment periods to the respective payment
9		dates of the taxes. Federal and State Unemployment taxes are paid after the end of
10		each quarter based on the employees' annual wages up to the maximum amount.
11		The payment lead or lag for non-payroll-related taxes was calculated from

12 the midpoint of the period for which the tax was assessed to the payment date. It 13 was not necessary to calculate lead or lag days for Local Street Rental Taxes, Sales 14 Taxes or Texas State Gross Receipts Taxes since these taxes are prepaid and their 15 working capital requirements are reflected elsewhere in revenue requirements 16 rather than in the CWC calculation. To determine the average lag days for State 17 Franchise Taxes, the study utilizes the statutory payment requirements and resultant 18 pattern. This requires that the study recognize that the Company paid State 19 Franchise Taxes in May 2021 in order to conduct business in the State of Texas 20 from January 1 through December 31, 2021. This calculation is consistent with the 21 calculation of the lead-lag days for all of the other expenses and revenues included 22 in the lead-lag study.

1	Q30.	IS YOUR CALCULATION OF THE LAG DAYS FOR THE STATE
2		FRANCHISE TAX CONSISTENT WITH THE MOST RECENT
3		PRECEDENTIAL RULING BY THIS COMMISSION IN AN ETI RATE CASE?
4	Α.	Yes, it is.
5		
6	E.	Expense Lead – Depreciation, Deferred Income Tax Expense, and Return
7	Q31.	HOW WERE THE LEAD DAYS DETERMINED AND APPLIED TO COSTS
8		RECORDED AS DEPRECIATION, DEFERRED INCOME TAX EXPENSES,
9		AND RETURN?
10	Α.	Consistent with this Commission's Substantive Rule, the CWC study uses the cash
11		method and therefore excludes non-cash items, including depreciation,
12		amortization, deferred taxes, and return.
13		
14		F. Other Adjustment – Average Bank Balances
15	Q32.	PLEASE EXPLAIN THE OTHER COMPONENT THAT YOU HAVE
16		INCLUDED IN CWC.
17	A.	The Other CWC component includes Average Bank Balances, which represent
18		investor-supplied capital required to fund assets not otherwise included in rate base.
19		They are not, however, directly measured in the analysis of revenue requirements
20		and must be separately included in the CWC measure.

1 Q33. WHY HAVE YOU INCLUDED AVERAGE BANK BALANCES?

A. The CWC reflects check float on disbursements as an addition to expenses paid by
check to reduce cash working capital. Because the Company cannot control when
checks will clear the bank and because of other minimum balance requirements
imposed by banks, the Company must maintain certain levels of available cash in
its bank accounts. Therefore, the actual bank cash balances are included in CWC
since these funds must be supplied by investors. The amount was determined from
the actual daily average of cash balances.

9 The inclusion of average cash balances is consistent with 16 TAC 10 § 25.231(c)(2)(B)(iii)(IV)(e), which states that "... the balance of cash and working 11 funds included in the working cash allowance calculation shall consist of the 12 average daily bank balances of all non-interest bearing demand deposits and 13 working cash funds."

14

15

IV. <u>CONCLUSION</u>

16 Q34. HAVE YOU DETAILED THE CALCULATIONS AND METHODOLOGIES17 FOR THE LEAD-LAG STUDY?

A. Yes. Exhibit JJJ-3 shows the specific expense lead and revenue lag days used for
each of the components. The supporting documentation can be found in the work
papers to Schedule E-4.

21

22 Q35. WHAT WERE THE RESULTS OF THE LEAD-LAG STUDY?

A. The CWC requirement is \$(9,533,144) as shown on Exhibit JJJ-3.

1	Q36.	ARE THE RESULTS OF THIS LEAD-LAG STUDY REASONABLE?
2	Α.	Yes. Based on my experience and the application of the process described above,
3		ETI's calculated CWC requirements resulting from this lead-lag study are fair and
4		reasonable, comply with 16 TAC § 25.231(c)(2)(B)(iii) and precedent, and should
5		properly be included in rate base.
6		
7	Q37.	DOES THAT CONCLUDE YOUR DIRECT TESTIMONY?

8 A. Yes, it does.

AFFIDAVIT OF JAY JOYCE

THE STATE OF TEXAS)) THE COUNTY OF DALLAS)

This day, Jay Joyce the affiant, appeared in person before me, a notary public, who knows the affiant to be the person whose signature appears below. The affiant stated under oath:

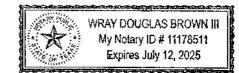

My name is Jay Joyce. I am of legal age and a resident of the State of Texas. The foregoing testimony and exhibits offered by me are true and correct, and the opinions stated therein are, to the best of my knowledge and belief, accurate, true and correct.

SUBSCRIBED AND SWORN TO BEFORE ME, notary public, on this the $\underline{\mathcal{M}^{\mathcal{C}}}^{n}$ day of June 2022.

Notary Rublic, State of Texas

My Commission expires:

16 TAC § 25.231(c)(2)(B)(iii)

- (iii) A reasonable allowance for cash working capital. The following shall apply in determining the amount to be included in invested capital for cash working capital:
 - (1) Cash working capital for electric utilities shall in no event be greater than one-eighth of total annual operations and maintenance expense, excluding amounts charged to operations and maintenance expense for materials, supplies, fuel, and prepayments.
 - (11) For electric cooperatives, river authorities, and investor-owned electric utilities that purchase 100% of their power requirements, one-eighth of operations and maintenance expense excluding amounts charged to operations and maintenance expense for materials, supplies, fuel, and prepayments will be considered a reasonable allowance for cash working capital.
 - (III) Operations and maintenance expense does not include depreciation, other taxes, or federal income taxes, for purposes of subclauses (I), (II), and (V) of this clause.
 - (IV) For all investor-owned electric utilities a reasonable allowance for cash working capital, including a request of zero, will be determined by the use of a lead-lag study. A lead-lag study will be performed in accordance with the following criteria:
 - (-a-) The lead-lag study will use the cash method; all non-cash items, including but not limited to depreciation, amortization, deferred taxes, prepaid items, and return (including interest on long-term debt and dividends on preferred stock), will not be considered.
 - (-b-) Any reasonable sampling method that is shown to be unbiased may be used in performing the lead-lag study.
 - (-c-) The check clear date, or the invoice due date, whichever is later, will be used in calculating the lead-lag days used in the study. In those cases where multiple due dates and payment terms are offered by vendors, the invoice due date is the date corresponding to the terms accepted by the electric utility.
 - (-d-) All funds received by the electric utility except electronic transfers shall be considered available for use no later than the business day following the receipt of the funds in any repository of the electric utility (e.g. lockbox, post office box, branch office). All funds received by electronic transfer will be considered available the day of receipt.
 - (-c-) For electric utilities the balance of cash and working funds included in the working cash allowance calculation shall consist of the average daily bank balance of all non-interest bearing demand deposits and working cash funds.
 - (-f-) The lead on federal income tax expense shall be calculated by measurement of the interval between the mid-point of the annual service period and the actual payment date of the electric utility.
 - (-g-) If the cash working capital calculation results in a negative amount, the negative amount shall be included in rate base.
 - (V) If cash working capital is required to be determined by the use of a lead-lag study under the previous subclause and either the electric utility does not file a lead lag study or the electric utility's lead-lag study is determined to be so flawed as to be unreliable, in the absence of persuasive evidence that suggests a different amount of eash working capital, an amount of eash working capital equal to negative one-eighth of operations and maintenance expense including fuel and purchased power will be presumed to be the reasonable level of eash working capital.

Entergy Texas, Inc. Cost of Service AJ06 Working Cash Electric For the Test Year Ended December 31, 2021

This adjustment calculates the working cash requirement.

1		I. INTRODUCTION AND QUALIFICATIONS
2	Q1.	PLEASE STATE YOUR NAME, OCCUPATION, BUSINESS AFFILIATION,
3		AND BUSINESS ADDRESS.
4	Α.	My name is Gregory S. Wilson. I am a consulting actuary specializing in the area
5		of property-casualty actuarial matters. I am a Vice President and Principal at
6		Lewis & Ellis, Inc. ("L&E"). My business address is 6600 Chase Oaks Blvd,
7		Suite 150, Plano TX 75023-2383.
8		
9	Q2.	PLEASE DESCRIBE YOUR EDUCATIONAL AND EMPLOYMENT
10		BACKGROUND.
11	А.	I received a Bachelor of Science degree in Applied Mathematics from the
12		University of Rhode Island in 1976.
13		In 1992, after completing all of the required examinations, I became a
14		Fellow of the Casualty Actuarial Society ("FCAS"), the highest designation a
15		property-casualty actuary can attain. This designation is obtained through a
16		rigorous process involving separate examinations on topics such as mathematics,
17		probability and statistics, theory of credibility, theory of risk and insurance,
18		economics, insurance coverages, ratemaking, loss reserving, insurance accounting
19		and regulation, and individual risk rating. I am also a Member of the American
20		Academy of Actuaries.
21		Following college, I was employed by Amica Mutual Insurance Company
22		until 1994, at which time I was a vice president serving as chief actuary and

23 supervising the actuarial department.

1 In 1994, I joined PricewaterhouseCoopers, LLP where I provided actuarial 2 consulting services to a wide variety of clients including insurance companies, 3 state insurance regulators, self-insured entities, and non-insurance corporations. I joined L&E in 2001, where I continue to provide actuarial consulting services to a 4 5 wide variety of clients. My resume is attached to this testimony as Exhibit GSW-1. 6 7 Q3. WHAT IS AN ACTUARY? 8 A, An actuary is a business professional who estimates the financial implications of 9 future contingent events or risk, which in the context of a rate case such as this 10 one is the risk of damage to the utility's facilities and infrastructure due to currently unknown (or contingent) future events. Actuaries use mathematics, 11 12 statistics, and financial theory to help manage such risks. In this proceeding, my 13 analysis of future financial consequences is performed in accordance with the 14 Actuarial Standards of Practice adopted by the American Academy of Actuaries, as well as the Statement of Principles Regarding Property and Casualty Loss and 15 16 Loss Adjustment Expense Reserves adopted by the Casualty Actuarial Society. 17

18 Q4. HAVE YOU EVER TESTIFIED BEFORE THE PUBLIC UTILITY
19 COMMISSION OF TEXAS ("COMMISSION")?

A. Yes. I submitted testimony addressing self-insurance reserve issues similar to
those that I address in this testimony in Docket Nos. 16705, 20150, 22356, 30123,
33309, 34800, 37364, 37744, 38339, 38480, 39896, 40606, 41791, 43950, 44704,
44746, 46957, 48371, 48401, 49421, 49494, 51415, 51583, and 51611. I have

also testified on self-insurance issues in conjunction with a utility rate filing
 before the Missouri Public Service Commission.

3

4

II. <u>PURPOSE AND SUMMARY OF TESTIMONY</u>

5 Q5. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

6 A, The general purpose of my testimony is to offer an independent opinion of the 7 reasonableness of the approach Entergy Texas, Inc. ("ETT" or "Company") 8 proposes to take with respect to protecting its Transmission and Distribution 9 ("T&D") assets through self-insurance and its treatment of damages relating to 10 Hurricanes Laura and Delta, plus the 2021 winter storm, through securitization. 11 The specific purpose of my testimony is: (1) to estimate the annual accruals 12 needed to provide for the expected property losses incurred by ETI for the storm 13 damage losses that are not covered by insurance and for which Section 36,064 of 14 the Public Utility Regulatory Act ("PURA") permits a provision to be made; and 15 (2) to estimate a target amount to accumulate in the self-insurance reserve along 16 with a recommended time period over which these accruals are to be made.

17 My testimony also includes a cost benefit analysis demonstrating that self-18 insurance at the levels proposed by ETI is a lower cost alternative to purchasing 19 insurance and is in the public interest, consistent with the 16 Tex. Admin. Code 20 ("TAC") § 25.231(b)(1)(G).

21

22 Q6. WHAT DOES THIS RULE PROVIDE?

23 A. This rule provides as follows:

1 Accruals credited to reserve accounts for self-insurance under a 2 plan requested by an electric utility and approved by the 3 commission. The commission shall consider approval of a self insurance plan in a rate case in which expenses or rate base 4 5 treatment are requested for such a plan. For the purposes of this section, a self insurance plan is a plan providing for accruals to be 6 7 credited to reserve accounts. The reserve accounts are to be 8 charged with property and liability losses which occur, and which 9 could not have been reasonably anticipated and included in 10 operating and maintenance expenses, and are not paid or 11 reimbursed by commercial insurance. The commission will 12 approve a self insurance plan to the extent it finds it to be in the public interest. In order to establish that the plan is in the public 13 interest, the electric utility must present a cost benefit analysis 14 performed by a qualified independent insurance consultant who 15 16 demonstrates that, with consideration of all costs, self-insurance is 17 a lower-cost alternative than commercial insurance and the 18 ratepayers will receive the benefits of the self insurance plan. The 19 cost benefit analysis shall present a detailed analysis of the 20 appropriate limits of self insurance, an analysis of the appropriate 21 annual accruals to build a reserve account for self insurance, and 22 the level at which further accruals should be decreased or 23 terminated.

24

25 Q7. WHAT HAS THE COMMISSION ESTABLISHED AS THE PROPERTY

26 INSURANCE EXPENSE AND RESERVE TARGET FOR ETI?

- 27 A. The Commission last approved ETI's storm cost accrual in Docket No. 41791,
- 28 consisting of \$4.972 million to provide for average annual expected storm losses
- 29 plus an annual accrual of \$3.570 million for 20 years to restore the reserve from
- 30 its deficit. It also set the target balance at \$15,512,000.
- 31

32 Q8. PLEASE SUMMARIZE YOUR RECOMMENDATIONS.

- 33 A. As shown on Exhibit GSW-2, I propose an annual accrual of \$14,555,000 and a
- new target property insurance reserve of \$15,244,000. The accrual is composed

of two elements. The first is \$6,315,000 to provide for average annual expected
losses from all storms that do not exceed \$80 million in total damages. As 1
explain subsequently, the \$6,315,000 annual accrual is calculated using a Monte
Carlo simulation run on the loss history of the Company. The second is
\$8,240,000 accrued annually for four years to achieve the target reserve of
\$15,244,000 from the test-year end reserve level, adjusted for securitization, of
\$-17.73 million.

8

9

III. <u>SELF-INSURANCE RESERVE BACKGROUND</u>

10 Q9. PLEASE STATE THE PURPOSE OF A SELF-INSURANCE RESERVE AND
11 EXPLAIN HOW IT WOULD OPERATE.

A. The purpose of ETI's self-insurance reserve is to provide for occurrences
resulting in storm-related T&D and other property loss of at least \$50,000.

Each year, an amount of money would be accrued in the self-insurance reserve to provide for losses expected to occur in the calendar year. In addition to this amount, an accrual would be made to raise the self-insurance reserve to a level that would serve as a financial buffer in the event that actual losses exceed the accrued annual expected loss amount. Accruals would be made to this reserve until it reaches the recommended target level, at which point contributions to the reserve would be reduced to the lower of annual expected losses or actual losses.

1 Q10. WHAT HAPPENS IF THE ANNUAL AGGREGATE LOSSES EXCEED THE

- 2 AMOUNT ACCRUED IN ANY GIVEN YEAR?
- A. If the annual aggregate losses exceed the amount accrued in any given year, the
 remaining reserve would be drawn upon to provide the needed additional
 amounts. If the annual aggregate losses are less than the amount accrued for that
 purpose, the excess annual accrual would remain in the self-insurance reserve,
 serving to bring the self-insurance reserve closer to its target level.
- 8

9 Q11. WHY IS IT NECESSARY TO BUILD THE SELF-INSURANCE RESERVE UP
 10 TO A CERTAIN TARGETED LEVEL?

- 11 A. The range of expected losses from storm damage covered by the self-insurance 12 reserve varies considerably from year to year, as will the actual losses that ETI 13 will incur. The self-insurance reserve needs to be sufficient to cover the losses for 14 each year, knowing that any given year's actual losses may be very different from 15 the average expected losses. Hence, a reserve large enough to provide for some 16 variation in the annual aggregate amount of losses is needed.
- 17

18 Q12. IS ETI'S SELF-INSURANCE PROGRAM IN THE CUSTOMERS' INTEREST?

A. Yes. ETI's self-insurance program is in the best interest of ETI's customers. As
will be shown later, it provides a lower cost alternative than purchasing insurance
for all losses. At the same time, it provides for utility rate stability by providing
for a self-insurance reserve to absorb the variation in the experience from the

3

4

IV. <u>ANNUAL EXPECTED LOSSES</u>

5 Q13. HOW MUCH MONEY SHOULD ETI ACCRUE ANNUALLY IN THE SELF6 INSURANCE RESERVE TO COVER THE EXPECTED LOSSES FOR EACH 7 YEAR?

8 Α. The amount I recommend to be accrued annually for expected losses for the self-9 insurance reserve is \$6,315,000. This amount is the expected value of the annual 10 losses incurred by ETI from all storm damage, except those totaling over 11 \$80 million, adjusted to reflect current conditions and current cost levels. The 12 recommended amount of \$6,315,000 is calculated by running the Company's loss 13 history (shown on Exhibit GSW-3) through a Monte Carlo simulation. Α 14 Monte Carlo simulation is a statistical technique incorporating a computer 15 program to simulate loss experience over a longer period of time than the period 16 captured in the available loss history.

The program simulates individual losses on an annual basis for ETI for 5,000 iterations of annual experience. A statistical distribution is estimated from ETI's trended loss experience and input into the model. The model is run 10 times, each time simulating 5,000 possible outcomes. From these 50,000 iterations of simulated experience, I was able to determine that the average annual indicated loss over this period was \$6,315,000.

Exhibit GSW-4 contains an example showing how each historic loss was 1 2 adjusted to reflect the current cost levels using the Handy-Whitman index of cost 3 trends of electric utility construction for the South Central Region. The Handy-Whitman index data is a standard type of database used to measure cost changes 4 5 for utility companies. The loss in the example occurred on April 9, 2020, for 6 The Handy-Whitman index as of July 2020, was 777; as of \$577,709. 7 January 2020, it was 763. Interpolating between these two points to April 09, 8 2020, produces an expected index of 770,615. As of January 2022, the Handy-9 Whitman index was 796. Thus, the change from April 9, 2020, to January, 2022, 10 was 796 divided by 770.615 or 1.033 (3.3% increase). Multiplying the loss of \$577,709 by 1.033 gives a cost-adjusted loss of \$596,773. This procedure was 11 12 used for each loss of \$50,000 or greater that occurred during the experience 13 period. This approach is reasonable because it adjusts historic costs to current 14 dollar levels.

15

16 Q14. WERE ANY OTHER ADJUSTMENTS MADE TO THE HISTORICAL DATA?

A. Yes. The majority of the losses from Hurricanes Rita, Gustav, Ike, Laura and Delta were removed from the historical data because those losses were securitized, and recovery for those losses was not accomplished through the insurance reserve. Finally, costs from Hurricane Harvey had been removed from the historical data since those costs were recorded to a regulatory asset following the 2018 base rate case.

1 Q15. WERE ANY ADJUSTMENTS MADE TO THE MONTE CARLO 2 SIMULATION TO ADJUST FOR POTENTIAL SECURITIZATION?

3 A. Yes. I adjusted the results from the simulation by removing any simulated storm 4 where the total storm loss exceeded \$80,000,000 based on ETI's representation 5 that any loss that exceeds this amount may provide net customer benefits through 6 securitization. The losses shown on Exhibit GSW-3 are for those storm damages 7 that were charged to the insurance reserve. That is, they are the expense portion 8 of the storm damages. The capital loss from storm damage is not charged to the 9 insurance reserve. Exhibit GSW-5 shows the expense portion and the capital 10 portion of each storm for 2015 through 2021. The total line on the exhibit shows that 32.9% of the total storm damage is expense and charged to the insurance 11 12 reserve. As a result, when I run my Monte Carlo simulation, I remove any results 13 where the total damage is over \$80 million. Because the simulation is run only on 14 the expense portion of the storm damage, I cap the expense portion of the 15 damages at \$80 million times 32.9%, or \$26.32 million.

- 16
- 17

V. <u>TARGET RESERVE</u>

18 Q16. WHAT IS THE TARGET AMOUNT OF MONEY NEEDED TO PROVIDE19 FOR AN ADEQUATE SELF-INSURANCE RESERVE?

A. The recommended total target amount of the reserve is \$15,244,000, which is the amount of O&M damage expected to result from a 25-year storm with total losses under \$80 million. Having an adequate self-insurance reserve is important because ETI needs to provide for anticipated T&D and other property losses

- resulting from severe storms in order to ensure safe, reliable, and adequate service
 to ratepayers.
- 3

4 Q17. WHY IS IT NECESSARY TO ACCRUE MORE TO THE SELF-INSURANCE 5 RESERVE THAN THE \$6,315,000 FOR EXPECTED ANNUAL LOSSES?

- A. The \$6,315,000 accrual is intended to cover only the average annual expected loss
 from storm damage. Because these losses can range from very low amounts to
 millions of dollars in any given year, the storm damage reserve needs to be built
 up to provide for extreme or catastrophic events.
- 10

11 Q18. HOW WAS YOUR TARGET RESERVE OF \$15,244,000 DEVELOPED?

- A. As indicated above, I ran a Monte Carlo simulation on the loss history of ETI.
 From the 5,000 iterations of simulated experience, I was able to determine that in
 any 25-year period, the largest expected loss totaling less than \$80 million is
 approximately \$15,244,000.
- 16

17 Q19. WHY IS THIS RESERVE LEVEL APPROPRIATE?

A. This reserve level is the amount that ETI should carry to make an actuarially sound provision for coverage of the self-insured losses. The target reserve will be sufficient if annual losses are equal to or less than the target in a given year provided the reserve is already in place at its target amount, but if the actual losses exceed the amount accrued for the expected annual amount for several years in a row, the self-insurance reserve may be depleted.

1		For example, once the reserve level has been reached, if there are several
2		years with losses of approximately \$4,000,000, the reserve will remain level.
3		However, if there are two consecutive years with annual aggregate losses of more
4		than \$12,000,000 each year, the self-insurance reserve would be in a deficit
5		position, and the deficit amount would need to be collected from future
6		ratepayers.
7		
8	Q20,	WHAT IS THE CURRENT STATUS OF THE BALANCE OF THE RESERVE?
9	А.	The Commission found in Docket No. 41791 that the reasonable and necessary
10		reserve balance in rate base for property insurance should be \$15,512,000. As
11		shown on Rate Filing Package Schedule B-1 WP Adjustments to Property
12		Insurance Reserve, Page 7, the reserve at the end of the test year reflects a balance
13		of \$-63,218,652. The securitization will allow for the recovery of \$45,488,004 in
14		storm damage costs, leaving a reserve balance of \$-17,730,648.
15		
16	Q21.	WHAT ARE THE INDIVIDUAL COMPONENTS OF THE ANNUAL
17		ACCRUAL TO THE SELF-INSURANCE RESERVE INDICATED BY YOUR
18		ANALYSIS?
19	А.	The annual amount to be accrued each year is \$14,555,000, which is composed of
20		two elements. First, there is \$6,315,000 each year to provide for the year's annual
21		expected losses from storm damages. Second, there should be an accrual of
22		\$8,240,000 each year for four years to provide for the variation in annual losses
23		from year to year by building the total self-insurance reserve from the adjusted

1 current balance of \$-17.731 million up to the \$15,244,000 level. I have 2 recommended a four-year period to balance the interests of current and future 3 ratepayers, and to reflect that the Company is scheduled to file its next rate case in 4 four years. 5 6 Q22. ARE THESE CALCULATIONS PREPARED IN ACCORDANCE WITH 7 GENERALLY ACCEPTED ACTUARIAL PROCEDURES? Α, 8 Yes. The process reflects generally accepted actuarial procedures. However, I 9 have made certain adjustments to reflect the nature of ratemaking for public 10 utilities. For example, it would be customary to project losses to the anticipated cost level of the future time period during which rates will be in effect. Because 11 12 of the historical test year approach to utility ratemaking and the adjustment of 13 expense items based on known and measurable quantities only, I have limited loss 14 adjustments to the cost levels. The dates to which the losses were adjusted reflect 15 the dates of the most recent indices available at the time the adjustments were 16 made. 17 In addition, no adjustment has been made to reflect future increased

17 In addition, no adjustment has been made to reflect future increased 18 exposure to loss. For example, in 2023 ETI may own more property in the 19 service area that is exposed to loss than it had in years prior to 2020. This would 20 increase the exposure to loss, and lead to a higher recommended reserve.

1 Q23. HOW WILL THE SELF-INSURANCE RESERVE ACCRUALS OPERATE?

A. The excess of annual expected losses over actual self-insured losses, to the extent
there is any such excess, will accrue to the self-insurance target reserve and cause
ETI to reach its target earlier, all other things being equal. Any deficiency
between the annual expected losses and the actual self-insured layer losses in any
calendar year will serve to extend the period over which the Company can expect
to reach its target.

8

9

VI. <u>COST BENEFIT ANALYSIS</u>

10 Q24. HOW DID YOU DETERMINE THAT SELF-INSURANCE IS A LOWER
11 COST ALTERNATIVE FOR THOSE T&D AND OTHER PROPERTY
12 LOSSES THAT ARE STORM-RELATED AND GREATER THAN \$50,000?

A. There are at least two ways to consider the cost-benefit of self-insuring these
 losses. The first is by considering the manner in which insurance companies set
 premiums and the second is by an actual comparison to estimated insurance
 premiums for the self-insurance coverage.

Q25. WHAT ASPECTS OF AN INSURANCE COMPANY'S PREMIUM
 DETERMINATION PROCESS DID YOU CONSIDER IN CONCLUDING
 THAT THE SELF-INSURANCE APPROACH FOR THE DESIGNATED
 LAYER OF LOSSES IS APPROPRIATE?

A. Insurance companies include provisions in their premiums for all costs associated
with the transfer of the insurance risk. Hence, they include provisions for losses,
loss adjustment expenses, non-loss related expenses, premium taxes, and a profit.

8 A self-insurance reserve, such as ETI's reserve, does not need to include 9 many of the provisions other than those for losses and loss-related expenses. An 10 insurance company needs to make a profit on the business it transacts. A selfinsurance reserve, on the other hand, is not intended to generate a profit and, 11 12 hence, no provision for profit needs to be included in the accrual provisions. 13 Insurance companies also incur costs associated with the acquisition of insured 14 The largest of these expenses is that associated with the payment of risks. commissions to insurance agents or brokers to place the business. A self-15 insurance reserve does not include any provision for commissions. Finally, an 16 17 insurance company must expend resources to underwrite risks, market its 18 products, and maintain overhead expenses. A self-insurance reserve does not 19 need to provide for these costs or pay premium taxes and other state-imposed 20 fees.

In summary, self-insurance saves the costs of commissions, profit,
 premium taxes, and many of the general expenses associated with the operation of
 an insurance company.

Q26. WHAT OTHER COST BENEFIT ANALYSIS HAVE YOU RELIED UPON TO
 SHOW THAT THE COST FOR THE SELF-INSURED LAYER IS LOWER
 THAN THE COST OF INSURANCE FOR THE SAME LAYER OF
 INSURANCE AND IS IN THE INTEREST OF THE COMPANY'S
 CUSTOMERS?

6 A. Comparing the cost of self-insurance versus the cost of buying insurance is 7 another way to establish that it is more cost effective for ETI to self-insure. As 8 explained by Kristen Labat in Docket No. 51997, Entergy investigates the 9 availability of T&D coverage on an annual basis. The Entergy Conventional 10 Property Insurance Program has an annual renewal date of June 1. The renewal process includes discussions with underwriters beginning in the first quarter of 11 12 each year. Primary underwriters participating on the panel of insurers are queried 13 as to the availability of T&D coverage. Negotiations with insurers for the 14 coverage that they are willing to provide are generally completed by mid-May. During this period, Entergy provides loss history as well as the geographical 15 location of major facilities to potential insurers. This data is used by the 16 17 underwriters to model weather-related events and the potential impacts on their 18 respective portfolios. The results of the modeling, in combination with Entergy's 19 loss history, are used by the underwriters to evaluate the possibility of insurance 20 coverage for Entergy's assets. Unfortunately, insurers are not willing to take the risk of insuring T&D assets because of Entergy's geographical footprint 21 22 (including ETI), which contains severe wind and flood risk (including hurricanes).

1		VII. <u>CONCLUSION</u>
2	Q27.	WHAT DO YOU CONCLUDE REGARDING ETI'S REQUEST FOR SELF-
3		INSURANCE RESERVE TO T&D PROPERTY LOSSES?
4	Α.	I have conducted an analysis that meets the Commission's rule requirements and
5		have demonstrated that self-insurance is necessary and desirable given the lack of
6		reasonably priced commercial insurance.
7		
8	Q28.	DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

9 A. Yes, at this time.

AFFIDAVIT OF GREGORY S. WILSON

)))

THE STATE OF TEXAS COUNTY OF COLLIN

This day, $\underline{JUNE7H}$, $\underline{WN2}$ the affiant, appeared in person before me, a notary public, who knows the affiant to be the person whose signature appears below. The affiant stated under oath:

My name is Gregory S. Wilson. I am of legal age and a resident of the State of Texas. The foregoing testimony and exhibits offered by me are true and correct, and the opinions stated therein are, to the best of my knowledge and belief, accurate, true and correct.

Gregory St Wilson

SUBSCRIBED AND SWORN TO BEFORE ME, notary public, on this the $\frac{7}{2}$ day of June 2022.

When Min Men. Notary Public, State of Texas

My Commission expires:

12-09-2024

ASHLEY MINCHEY My Notary ID # 132816933 Expires December 9, 2024

GREGORY S. WILSON, FCAS, MAAA Vice President and Principal

CURRENT POSITION

Mr. Wilson is a Vice President and Principal with Lewis & Ellis, Inc.

EXPERIENCE:

Mr. Wilson's responsibilities include evaluating the adequacy of insurance company reserve levels in conjunction with actuarial certification for the annual statement as well as state insurance department examinations. He also evaluates the adequacy of loss reserves for several self-insured companies. In addition, he performs rate level analyses for insurance companies and helps them prepare filings for the state insurance departments, as well as self-insured analyses for electric utilities and prepares testimony for the Public Utility Commission.

Prior to joining the firm, Mr. Wilson was a Principal Consultant at PricewaterhouseCoopers LLP. His responsibilities were similar to his current responsibilities. In addition, he reviewed retrospective rating calculations for several companies involved in class action litigation in Texas. He also performed several funding analyses for governmental entities.

Prior to joining PricewaterhouseCoopers LLP, Mr. Wilson was Vice President of Amica Mutual Insurance Company in Providence, Rhode Island. There, he supervised all aspects of ratemaking, from procedures to recommendations, helped negotiate the purchase of reinsurance, determined IBNR, developed a strategy for Massachusetts Automobile and developed other states' residual market strategies, in particular, New York and New Jersey.

EDUCATION

Mr. Wilson received his Bachelor's degree in Applied Mathematics from the University of Rhode Island.

PROFESSIONAL ACTIVITIES

Mr. Wilson is a former member of the Casualty Actuarial Society's Examination Committee, Committee on Ratemaking, and Committee on Reserving. He is also a Past President of the Southwest Actuarial Forum.

EXHIBITS

Exhibit SCM-1	Resume of Sean C. McHone
Exhibit SCM–2	Conceptual Cost Estimates for Electrical Generating Station Demolition
Exhibit SCM-3	Scrap Metal Volatility Chart

	I. <u>INTRODUCTION</u>
Q1.	PLEASE STATE YOUR NAME, BUSINESS ADDRESS AND POSITION.
A.	My name is Sean C. McHone, and my business address is 55 East Monroe Street,
	Chicago, Illinois 60603. I am a Member, Senior Vice President, and Project
	Director with Sargent & Lundy, LLC ("S&L"). S&L is a consulting engineering
	firm working mainly with electric utilities. S&L has provided consulting
	engineering services to the electric power utility industry for more than 130 years.
Q2.	WHAT IS YOUR EDUCATIONAL AND PROFESSIONAL BACKGROUND?
A.	I received a Bachelor of Science degree in Mechanical Engineering in 1998 from
	the University of Illinois at Chicago. I joined S&L in 1997 as an intern and upon
	graduation in 1998, I was hired on as a full time Engineer. I was promoted to my
	current position in January 2018. My experience includes a wide range of
	engineering and management duties in various positions related to the electric
	power industry.
	I have 25 years of extensive experience in the design and engineering of
	major steam-electric generating stations. Before assuming my current

ıt responsibilities, I served as Senior Project Manager for the firm. In that position, I provided management and overall direction for engineering, design, and related technical and/or support activities performed by all disciplines assigned to power plant projects. I planned, coordinated, and monitored the work of the various disciplines assigned to a project and communicated routinely and frequently with clients to develop a mutual understanding of client priorities and issues. I was also

responsible for assuring that the work was planned and performed on schedule,
 within budget, and according to the agreed upon scope of work, with an emphasis
 on quality and client satisfaction.

In my current position as Senior Vice President, I provide leadership and 4 5 direction to all levels and all disciplines of the engineering and design organizations at S&L. Such leadership and direction ensures that S&L engineering and design 6 7 deliverables meet our clients' expectations, capture the scope of our assignments, 8 are technically correct, and are of the highest quality. I ensure that S&L standards 9 are continually updated so they reflect current industry codes, standards, and also 10 capture the current state-of-the-art of vendor supplied equipment and components. My 20-plus years of performing detailed engineering and design assignments 11 exclusively in the power generation industry, both nationally and internationally, 12 13 has given me a strong foundation of experience from which to draw to make sure 14 that S&L assignments are carried out in a technically correct manner with quality, budget, and schedule expectations achieved. My experiences include the design 15 and construction of new full-scale power generation facilities, as well as the 16 17 demolition of, and upgrades to, existing power generation facilities.

18 My experience consists of both domestic and international work. This 19 includes engineering, analysis, design, development of construction specifications, 20 procurement, construction management, commissioning, and project management 21 of multidisciplinary engineering activities for major power block structures and 22 ancillary buildings. My resume is provided in Exhibit SCM-1 and more fully 23 details my qualifications and extensive power plant experience. 1

Q3.

2 Α, I am testifying on behalf of Entergy Texas, Inc. ("ETI" or the "Company"), 3 4 Q4. ARE YOU FAMILIAR WITH ETI FOSSIL GENERATING PLANTS? 5 Yes. In addition to the demolition studies and the underlying information used A. 6 therein, I have some first-hand experience with some of the ETI Fossil Generating 7 Plants. Specifically, I was directly involved with the Mercury and Air Toxics 8 Standards ("MATS") Compliance Project for the Nelson 6 Station, as well as the 9 construction of the Montgomery County Power Station. 10 11 O5. HAVE YOU PREVIOUSLY SUBMITTED TESTIMONY BEFORE A 12 **REGULATORY AGENCY?** 13 Α. Yes, I previously submitted testimony on behalf of ETI in its 2018 base-rate case. 14 15 П. PURPOSE OF TESTIMONY 16 PLEASE DESCRIBE THE PURPOSE OF YOUR TESTIMONY AND HOW IT Q6. 17 RELATES TO OTHER WITNESSES. 18 My testimony addresses the results of the site-specific studies conducted by S&L Α. 19 to estimate the costs of dismantling ETI's electric power generating facilities. I am 20 sponsoring the demolition cost estimate studies that are contained in Exhibit 21 SCM-2. Exhibit SCM-2 includes the demolition cost estimate studies for the 22 following ETI generating facilities:

ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS PROCEEDING?

• Big Cajun 2, Unit 3 and common;

1 2 3 4 5 6		 Hardin County Power Station; Lewis Creek Units 1-2 and common; Montgomery County Power Station; Nelson Unit 6 and common; Sabine Units 1-5 and common; and Spindletop Gas Storage Facility.
7		ETI witness Dane Watson incorporates the results from my dismantling
8		study in his depreciation study.
9		
10		III. <u>BACKGROUND</u>
11	Q7.	WHY IS IT NECESSARY TO DISMANTLE A GENERATING STATION AT
12		THE END OF ITS USEFUL LIFE?
13	Α.	There are a number of reasons for dismantling generating stations at the end of their
14		useful life. To reuse land, structures and facilities would need to be removed.
15		Because the number of locations in the nation that are conducive to electric
16		generating stations is limited, it is possible that after the retirement of the units,
17		future generating stations would be located at these sites to take advantage of
18		existing substations, transmission lines, gas lines, rail lines, etc. Reuse of these
19		locations would require removal of any previous structures. Also, there is a safety
20		concern, and, therefore, a potential public risk, if security is not maintained at the
21		facilities. If abandoned structures are not dismantled, the structures will deteriorate
22		if not maintained. Some of the structures, such as exhaust stacks, could create
23		potential public safety risks and have the potential to collapse and cause damage.
24		Removal and disposal of asbestos is also required in any location where it exists.

Q8. PLEASE BRIEFLY DESCRIBE HOW S&L PERFORMED ITS STUDIES OF THE COST OF DISMANTLING ETI'S ELECTRICAL GENERATING FACILITIES.

4 Α. Our method of performing these cost estimate studies started with participating in 5 meetings with representatives of ETI in order to determine the scope of work and assumptions. We also worked with ETI representatives to gather information on 6 7 plant characteristics to be used in the studies. These documents provided the 8 location of major facilities on site and the arrangement inside the power blocks at 9 each plant, such as the boiler building, the turbine building, etc., along with other 10 pertinent information for the studies. The unique characteristics of each site were captured by methods such as reviewing general arrangement drawings and aerial 11 12 photographs, and/or site visits. In addition, we reviewed the previously developed 13 demolition estimates for certain generating units from 2018. For those units 14 evaluated in 2018, meetings were held with the station personnel to identify 15 changes made to the facility since the previous estimates were prepared. The 16 changes were then incorporated into the input quantities used to develop the current 17 demolition estimates.

This data was reviewed in detail to finalize the scope of the cost estimates and the assumptions that were used to develop the cost estimates. For example, in a number of instances, we assumed that there was sufficient room on site to dispose of all the non-hazardous debris. We also assumed that it would not be necessary to remove all of the tens of thousands of feet of underground piping and wiring from the sites. Assumptions such as these minimize the demolition cost estimate and

1		result in a reasonable cost estimate for dismantling the facility. This is not a "brick
2		by brick" demolition cost estimate that assumes every single component is
3		demolished in an inefficient manner. A more detailed description of the scope and
4		parameters of the studies can be found in Exhibit SCM-2.
5		This process is consistent with that used to develop the S&L demolition
6		studies reviewed by the Public Utility Commission of Texas ("Commission") in
7		connection with three prior rate cases of Southwestern Electric Power Company
8		("SWEPCO"), Docket Nos. 40443, 46449, and 51415, as well as ETI's 2018 base-
9		rate case.
10		
11	Q9.	WHEN DID S&L CONDUCT THE SITE VISITS FOR THE DEMOLITION
12		STUDIES SUBMITTED IN THIS PROCEEDING?
13	А.	S&L conducted the site visits specific to the demolition cost studies for all of ETI's
14		four fossil fueled generating facilities in January of 2022.
15		
16		IV. <u>DEMOLITION COST ESTIMATE STUDIES</u>
17	Q10.	PLEASE DESCRIBE THE COST ESTIMATE STUDIES CONTAINED IN
18		EXHIBIT SCM-2.
19	Α.	As I mentioned, Exhibit SCM-2 presents the demolition cost estimates for the
20		generating facilities I listed at the outset of my testimony. The costs for demolition
21		of structures, equipment, etc., are separately itemized for each generating facility
22		in this exhibit. The assumptions and commercial considerations used to develop

23 the cost estimates are also identified in this exhibit.
