ENTERGY TEXAS, INC.
MODEL INFORMATION
WEATHER ADJUSTMENT OF RETAIL SALES

1. All models were estimated using MetrixND software (Itron, Inc.), version 7.0

All models are linear least square equations with the general form:

$$UPC/Day = \text{Constant} + Mo. \text{ Binaries} + H1*DDH1 + H2*DDH2 + \dots + C1*DDC1 + \text{etc.}$$

where:

UPC/Day = Usage per customer per revenue month days

Monthly Binaries = variables which capture non-weather-related usage patterns in a particular month

H1 and C1 etc. = heating and cooling coefficients by temperature band

DDH1 and DDC1 etc. = heating and cooling degree days by temperature band

Temperatures are based on weighted average of Houston (52%) and Beaumont (48%) weather data.

Cooling 1 = 55 to 60 degrees

Cooling 2 = 60 to 65 degrees

Cooling 3 = 65 to 70 degrees

Cooling 4 = 70 to 75 degrees

Cooling 5 = 75 to 80 degrees

Cooling 6 = 80 to 85 degrees

Cooling 7 = 85 to 90 degrees

Cooling 8 = above 90 degrees

Heating 1 = 65 to 60 degrees

Heating 2 = 60 to 55 degrees

Heating 3 = 55 to 50 degrees

Heating 4 = 50 to 45 degrees

Heating 5 = below 45 degrees

2.

MODEL INFORMATION
WEATHER ADJUSTMENT OF PEAK LOADS

1. All models were estimated using MetrixND software (Itron, Inc.), version 7.0

All models are linear least square equations with the general form:

$$\text{Peak} = \text{Constant} + \text{Weekday Binaries} + \text{Mo. Binaries} + \text{Holidays} + \text{H1} \cdot \text{HDD1} + \text{H2} \cdot \text{HDD2} + \dots + \text{C1} \cdot \text{CDD1} + \text{etc.}$$

where:

Peak = daily peak load

Weekday Binaries = variables which capture non-weather-related usage patterns in a particular day of the week

Monthly Binaries = variables which capture non-weather-related usage patterns in a particular month

Holidays = daily variables which capture non-weather-related usage patterns on specific holidays

H1 and C1 etc. = heating and cooling coefficients by temperature range

HDD1 and CDD1 etc. = daily heating degree day and cooling degree day values

Temperatures are based on weighted average of Houston (52%) and Beaumont (48%) weather data.

Daily peak loads from 1/1/2021-12/31/2021 as provided by Rate Administration

ENTERGY TEXAS, INC.
HISTORICAL WEATHER DATA
HEATING AND COOLING DEGREE DAYS BY TEMPERATURE BAND AND BILLING CYCLE
MONTHLY FROM JANUARY 2010 TO DECEMBER 2021

Temperatures are weighted averages based on two weather stations:
Beaumont 48% and Houston 52%

Residential Band Definitions (average daily temperatures)

Cooling 1 = 55 to 60 degrees
Cooling 2 = 60 to 65 degrees
Cooling 3 = 65 to 70 degrees
Cooling 4 = 70 to 75 degrees
Cooling 5 = 75 to 80 degrees
Cooling 6 = 80 to 85 degrees
Cooling 7 = 85 to 90 degrees
Cooling 8 = above 90 degrees
Heating 1 = 65 to 60 degrees
Heating 2 = 60 to 55 degrees
Heating 3 = 55 to 50 degrees
Heating 4 = 50 to 45 degrees
Heating 5 = below 45 degrees

By billing month

Degree Days are calculated for all days encompassed by a billed month
Each day is weighted by the percentage of the billing cycles to which it contributes
For example, if a particular day contributes to one billing cycle, its weight would be $1/21 = 4.8\%$

Degree days per band are the difference between the temperature and the "beginning" edge of the band (lower for cooling, upper for heating)

Schedule O-8.2

ENTERGY TEXAS, INC.
65 DEGREE BASE TEMPERATURE RESPONSES

Please see Schedules O-8.1 through O-8.3.

ENERGY TEXAS, INC.
MODEL INFORMATION
ECONOMETRIC SALES FORECASTS

1. All models were determined using MetrixND software, version 7.0

All models are linear least square equations with the form:

$$\text{Usage} = C(1) + \text{Coefficient } 1 * \text{Variable } 1 + \dots$$

where: Usage = MWh sales (for residential models, usage per customer and customer count are forecast individually)
CONST = Constant Term (where applicable)
Coefficient 1 etc. = Coefficients for Independent Variables
Variables = Independent Variables (See Schedule O-9.2)
Binary variables used when necessary (e.g., for months) to improve statistical validity of models
Weather variables the same as in weather normalization of sales model

The sales forecast was developed by revenue class, assuming "normal" weather using a combination of econometric and end use forecasting methods except for the largest industrial customers. The largest industrial customers are those customers in Texas that existing and new customers that are 10 MW or larger. There were 30 such customers in ETI for this forecast.

2.
