Note: Protected EUF is being amortized in accordance with IRS
Normalization rules using the Average Rata Assumption Method (ARAM).
Upprotected EDPIT identities in 2018 were sunctified over three-years and base been fully amortized. Out of removal was previously considered protected but IRS has subsequently clarified that it is unprotected. The cost of removal (EDPIT balance has been reclassified as unprotected at 120 PIT balance is being amortized over three years. See testimony of Jennifer Story for explanations.

This schedule shows the EDFIT itself and not the gross-up on the EDFIT. The gross-up is included as a component of ADIT as well as a regulatory asset/lisbility. Both are included in rate base, netting to zero.

PUBLIC UTILITY COMMISSION OF TEXAS CENTERPOINT ENERGY HOUSTON ELECTRIC, LLC II-E-3.22 HISTORY OF TAX NORMALIZATION TEST YEAR ENDING 12/31/2023 **DOCKET NO. 56211** SPONSOR: J. STORY

Line No.	Description
1	Prior to 1954, virtually no deferred income taxes were recorded as book and tax
2	depreciation were computed using similar methods and lives. The Company and its processors to the Company,

- began recording deferred taxes in 1954 when accelerated amortization methods were permitted
- and used for income tax purposes for certain electric plant, while the straight line
- procedure was used for book purposes. Deferred income taxes for these amounts were
- recorded in Account 281. From 1954 to 1969 deferred taxes were recorded only in
- Account 281 Accelerated Amortization.

8

- In 1970, the Company began using liberalized depreciation methods for tax purposes
- 10 (sum of the years digits method and 150% declining balance) while using straight-line
- 11 depreciation for book purposes. Under Section 167(1) of the Internal Revenue Code, if a
- 12 public utility wants to claim accelerated tax depreciation on its Federal Income Tax
- 13 Return, it must record deferred income taxes on the difference between the accelerated
- 14 and straight line methods on public utility property and such deferred income tax expense
- 15 must be permitted as a recoverable cost in computing its revenue requirements. The
- deferred taxes related to liberalized depreciation were recorded in Account 282.
- 17

- In 1975, the Company began recording deferred taxes on pollution control facilities
- (shorter life for income tax purposes) in Account 281 and used 200% declining balance 20 on a number of asset classes.
- 21

22

- In 1976, the Company began recording deferred taxes in Account 283 Deferred Federal 23 Income Taxes- Other.
- 24
- 25 In 1977, the Company followed the accounting and ratemaking policy of comprehensive
- interperiod income tax allocation (recording deferred income taxes), except that deferred
- 27 taxes were not provided on certain basis differences (such as interest deducted currently 28 for federal income tax purposes but capitalized for accounting purposes), and additions to
- 29 the property insurance reserve which were expensed currently for accounting purposes
- 30 but not allowed as a deduction for tax purposes until the loss was incurred.

31

Beginning in 1979, the Company followed the accounting and ratemaking policy of

CENTERPOINT ENERGY HOUSTON ELECTRIC, LLC
II-E-3.22 HISTORY OF TAX NORMALIZATION
TEST YEAR ENDING 12/31/2023
DOCKET NO. 56211
SPONSOR: J. STORY

Line	Description
No.	·
33	comprehensive interperiod income tax allocation including the basis difference for the
34	interest component of AFUDC which was deducted currently for federal income tax
35	purposes. For the period from January 1979 to December 1986, AFUDC- Debt was
36	recorded on a net of tax basis (the rate to record AFUDC-Debt was reduced for the tax
37	effect. Effectively, deferred income taxes on this book/tax difference were netted in the
38	plant accounts.)
39	
40	Also, in 1979, adjustments were reflected in Account 283 to reflect deferred taxes on the
41	basis difference for capitalized taxes. Such amounts are capitalized in plant in service
42	and depreciated for book purposes and deducted currently on the income tax return in the
43	year incurred. Deferred income taxes originate in the year such taxes are claimed on the
44	tax return and reverse as book depreciation is taken.
45	
46	The Economic Recovery Act of 1981 (IRC Section 168) permitted accelerated tax
47	depreciation for 1981 and future additions using the Accelerated Cost Recovery System
48	(ACRS). In order for a public utility to claim ACRS depreciation, all differences
49	between book and tax depreciation, excluding basis differences, must be normalized for
50	public utilities.
51	
52	In 1982, the Company recorded deferred taxes in Account 190 for the first time related to
53	benefit plan accruals. Benefit plan accruals per books are not deductible for tax purposes
54	until the benefit amounts are paid or funded. The number of benefit plans reflected in
55	this account increased over time.
56	
57	The Tax Reform Act of 1986 generally eliminated a current tax deduction for interest
58	during construction. AFUDC on most projects was computed using a gross rate effective
59	January 1, 1987. A current tax deduction was permitted in periods after December 31,
60	1986 for certain transition property.
61	
62	The Tax Reform Act of 1986 reduced the then current 46% corporate income tax rate to
63	40% in 1987 and to 34% in 1988 and thereafter. Included in that legislation was Section
64	203(e) which required that excess ADFTI relating to public utility plant caused by the
65	income tax rate reduction be reversed using the Average Rate Assumption Method.

CENTERPOINT ENERGY HOUSTON ELECTRIC, LLC
II-E-3.22 HISTORY OF TAX NORMALIZATION
TEST YEAR ENDING 12/31/2023
DOCKET NO. 56211
SPONSOR: J. STORY

Line	Description
No.	·
66	Under this method, if such excess ADFTT are used to reduce rates charged customers
67	more rapidly than over the life of the property generating such deferred income taxes, a
68	normalization violation will occur.
69	
70	The Company adopted SFAS No. 109 in 1992, with restatement to January 1, 1990.
71	SFAS No. 109, among other things, requires the liability method to be used in computing
72	deferred taxes on all temporary differences between the book and tax bases of assets
73	other than goodwill, requires that deferred tax liabilities and assets be adjusted for an
74	enacted change in tax laws or rates and prohibits net-of-tax accounting and reporting.
75	SFAS No. 109 requires that regulated enterprises recognize such adjustments to ADFTT
76	as regulatory assets or liabilities if it is probable that such amounts will be recovered
77	from or returned to customers in future rates. Adoption of SFAS No. 109 had no
78	ratemaking impact.
79	
80	On December 22, 2017, a comprehensive tax reform legislation informally called The Tax
81	Cuts and Jobs Acts, or TCJA was signed into law, which resulted in significant change to
82	federal tax laws effective January 1, 2018. TCJA had several key tax provisions that
83	impacted the Company, including the reduction of the corporate income tax rate from
84	35% to 21%. The new legislation included a variety of other changes, such as, a limitation
85	on the tax deductibility of interest expense, acceleration of business asset expensing, and
86	reduction in the amount of executive pay that may qualify for a tax deduction, among others.
87	The change in the federal income tax rate from 35% to 21% resulted in recording excess deferred
88	income taxes ("EDIT") for the Company. For regulated public utility property, ASC 980-740-25
89	requires that a regulatory asset or liability be recorded for the remeasurement of ADFT if it is
90	probable that the excess will be collected from or returned to customers through future rates.
91	Similar to the Tax Reform Act of 1986, the TCJA adopts the same categories of "protected" and
92	"unprotected" EDIT. Protected EDIT is generally related to method/life depreciation differences.
93	Section 13001(d) of the TCJA provides normalization rules that create penalties for reducing the
94	protected excess tax reserves more rapidly than under the average rate assumption method
95	("ARAM").
96	The Company uses the Powertax system which supports full normalization and flow through of
97	PP&E related basis differences.
98	PowerTax is used to track all PP&E related timing differences and is used to calculate protected
