**TEXAS-NEW MEXICO POWER COMPANY’S SUPPLEMENTAL RESPONSE TO
COMMISSION STAFF’S FIRST REQUEST FOR INFORMATION**

TEXAS-NEW MEXICO POWER COMPANY (“TNMP”) files this Supplemental Response to Commission Staff’s (“Staff”) First Request for Information to Texas New-Mexico Power Company. All parties may treat the answers as if they were filed under oath.

TNMP files these responses without agreeing to the relevancy of the information sought and without waiving their right to object at the time of the hearing to the admissibility of information produced herein.

Respectfully submitted,

/s/ Scott Seamster

**TEXAS-NEW MEXICO POWER COMPANY'S SUPPLEMENTAL RESPONSES TO
STAFF'S FIRST RFI**

STAFF 1-66. For each distribution pole that failed due to the May 2024 Derecho or Hurricane Beryl, please provide the date of the last inspection and explain the planned frequency of those inspections. Additionally, please provide the most recent inspection report for each pole that failed.

Attachment: Attachment STAFF 1-66

SUPPLEMENTAL RESPONSE: TNMP Engineering and Operations personnel are still in the process of reviewing service orders associated with the restoration during and after Hurricane Beryl. This review includes manually identifying certain distribution poles for reconciliation with individual pole failure records. The review is not complete at this time, however, TNMP has completed its review of certain areas in its service territory, specifically the circuits originating from TNMP's Angleton, Brazoria, Sweeney, and West Columbia Substations. TNMP's review is scheduled to be complete by October 1, 2024. In TNMP's Responses to Staff's First RFI filed in this Docket on August 30, 2024, TNMP committed to supplementing its response to this request with responsive information completed as of September 15, 2024. Accordingly, TNMP provides the Attachment STAFF 1-66. The following information is provided to assist with review of the attachment:

1. Each tab in the attachment relates to a substation with feeders that had circuit lockouts where upon inspection poles that failed were discovered resulting from Hurricane Beryl.
2. Each tab includes relevant circuit IDs (*i.e.*, within the Angleton tab, "AG1153").
3. Failed poles are listed as "Pole ID or description."
4. For poles that have available inspection records, Attachment STAFF 1-66 includes all information available for that pole from the most recent inspection. The information includes the date the pole was last inspected and the condition of the pole upon inspection, among other data. The condition of the pole is represented by one of three labels: "Non Reject – Restorable," "Restorable," or "Non Restorable Reject."
5. "No Inspection found" indicates that TNMP does not have an inspection report for the pole.

The following files are not convertible:

Staff 1-66(68036571.1).xlsx
