Note to stakeholders in the Texas Backup Power Package proceeding and workshop participants in Project 57236

Patrick Engineering completed and submitted its 1,171-page report with recommendations on the TBPP design. That report was filed in P. 56176, the Backup Power Package Advisory Committee project. You can access it here: <https://interchange.puc.texas.gov/search/documents/?controlNumber=56176&itemNumber=9>

I expect PUCT staff to inform us about how and where to file comments on the report, and whether they will be establishing a formal process for stakeholder and industry evaluation and feedback of the suitability and feasibility of Patrick Engineering's recommended TBBP designs.
